Looking for a near mint, unmodified and fully operational Globe 65A
transmitter - so I can relive the glory of yesteryear <grin>

Email is fine - give all particulars and price expected...

Thanks.

Now that is the 1,000,000 question (will he see that $1,875???). From the looks of the top 4 bidders, none of them has feedback and all 4 are brand new screen names (sunglasses after the name). I'd be willing to bet that that seller bid that way on his own auction in attempt to drive up the price. Unfortunately for him, its a ridiculous price !!! Its nothing to assume multiple idenities and bid on your own stuff (not that I have ever done that--just pointing it out).

Sorry, nitwit, but I proved no such thing, and neither have you. There are also equivalencies in other languages to most words in English... so I guess french is just a 'coding system', huh?

Also all computer languages are 'coding systems' too... in fact all languages of any kind are merely 'coding systems' to convey ideas... which is what cw does as well.

You just cannot get your mind around that you have lost on every point, Cecil. What a delusional loser you have conclusively proven yourself to be.

Hi,
Anyone replaced the internal hold-up battery? How do you disassemble the radio to get to the battery? Do you order it from Yaesu? I tried a local battery store, but they said without seeing the battery, they could not order the right one. They did not recognize the part # from the schematic. I assume it is soldered in, but evidently, there are different types of pin configurations. Any help would be appreciated.

Sorry but Kennedy was murdered in 1963. Johnson was president for the
remainder of Kennedy's term. He was re elected for 4 years. That
brings it to 68. Incentive licensing was introduced during the Johnson
regime. It was implemented in stages. I received a notice from the FCC
in Summer of 68 for operating in the Extra sub-band (7.010). It was
vacated because I had been out of the country and did not know
the "latest".

Not as legitimate... the sending tests were removed for legitimate
reason. An arthritic, or someone with palsy, etc, would be unable to do
so... so long as you allowed the keying means they needed to utilize,
there should not be much of a problem... it is the receiving that is
what counts.

What you consider 'obvious' is pure idiocy for the rest of the world,
Cecil.

And I post a name... thanatos999. You do not like it, deal with it. I
am not required to post more.

I have a call... and it is far superior to yours and I have posted it
already several times in this thread.

And you have not disproven or discredited a single thing I have said,
Cecil while I have pointed out your dishonor, dishonesty, whiny lazy
nature as well as your idiocy, foolishness and delusional status clearly
and conclusively.

And poor little Cecil just cannot seem to deal with it... poor baby.

ROTFLU!

Hate messages? Hardly. It is the lazy whiners who spew the hate.

And as for writing computer programs capable of being used to post to
ngs, I have done so... haven't you?

> Get a life,

Have one, thanks. And at least I earn my way through it... I do not
lay about lazily whining for everything I want like some participants in
this ng I could name...

> CB is what you act like, not a test you pass.

Actually it is a cesspool of a band... something the whiners will turn
Amateur Radio into.

I have been 100% on the money will every one of my other assessments.
There is no reason to believe I am not right in this one as well.

Especially with Cecil providing such a model example.

The 736 had a suggested retail price of $2385 plus $178 for the FL-52
filter, and $96 for the FL-100 filter. They typically sold for just
under $2,000. That's what I paid for mine.

It is interesting to examine the 4 high bidders for the 736. None
have any buying or selling history, and all have changed their id
within the last 30 days. Hope they are legit.

I stand corrected. It was the 2meter mobile. I checked, because I have the tm231 which has done me well for 10 years. Was ready to get a 261 for the wife's car when I saw that auction..

Oh well, whatever the price, at least they got a good radio.

cheers

I have a crossband bi-directional VHF to UHF repeater for sale.

It is mounted to an Astron RS-12 power supply and uses a Maxtrac 300
as the UHF radio and a M216 as the VHF radio. Both radios are 25 watt.

The RICK is mounted above the two radios.

This setup was used for a remote base application and works great!! I
got out of the business it was used for so now it is gathering dust.

I can have it programmed to your frequencies if needed.

$ 800.00 OBO

Please reply via e-mail.

Has anyone heard a good explanation of why they pulled such a
bone-headed marketing move? It seems to me(and Dean's reaction makes a
good illustration) that the target market for TechAmerica are the kind
of people who consider the words "Radio Shack" to be synonymous with
"Mediocre Electronics". The name change almost seems designed to drive
potential customers away.

Bill OM,

Maybe most, but not all. I design PC layouts, acquire parts,
assemble, and solder my own prototype circuits still, (including SMT
boards) even after 34 years as a design engineer, and I for one like it
that way. Apparently my employer does not consider that to be too
expensive :)

Hi Gang

I have a TS-870 for sale. It comes with a Heil dual element
hand mike and the owners manual. It is in perfect condition.
$1500.00

Hello
I would like to get information on how to build a 2m tube amplifier with 2X
4CX250B or some other tubes
The amplifier should produce more than 500W on SSB
best regards Martin SM7VHS

DSP tends to add two features not easily available on non processed radios.
the first is sharper, more stable and more controllable edges to pass bands or
cut bands of the processed signal (audio usually, from the speaker/phone
output).
The other, nice feature is 'adaptive filtering' which is essence is a way to
remove the steady tones in a signal (hetrodynes primarily) .. how good are
they? it varies, from the usuable but not outstanding radio shack dsp40, through
timewave and mfj units that usually cost more. Given my reactions, I might find
a use for another dsp40 for the right price (say 25)

Uh, Jeff . . .? Collins got his start in the manufacturing business when the Army and Navy discovered that his homebrewed rigs were better than anything the military had. Marconi had BUILT some of the military stuff. I would hazard a guess they they were pretty good with a soldering iron.

Close, but no cigar. Check QST in 1962, and the 1963 edition of the
ARRL licensing book. Incentive licensing was in place before Kennedy
was gone.

Odd that you should say that.

I have had many QSOs with overseas hams who could not speak a word of English nor I speak a word of Russian, French, German, or whatever. BUT, we could carry on a satisfactory conversation about an admittedly limited but useful set of topics using common CW abbreviations, etc.

It is a mistake to confuse Morse and CW - they are not the same by any means.

Ah, you took the bait. Tell us, Keith, the history of the soldering iron, a tool you seem to worship. I would especially be interested in the soldering iron Marconi used in the early 1890s when he began his experiments, what Branly used to make his coherer/decoherer detector in 1891, and what Maxwell used in 1873. Be specific now -- this is for the historical record.

3761. TS-440S restoration (I)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-02 00:00:00 UTC
From: "JOSE V. GAVILA (EB5AGV/EC5AAU)" <eb5agv@ctv.es>
Message-ID: <3897FB9F.36D22274@ctv.es>
Source record: 86609
Cross-posted to: rec.radio.amateur.equipment,uk.rec.radio.amateur

Hello!

After some days waiting for it, finally the TS-440S arrived at my shack on monday (31/1/2000). It was dirty but seemed as a good candidate for restoration (i.e. no scratches; just grummy). So, after doing a preliminary receiving check, to be sure it worked when arrived (it did except for some troubles with the keypad), I started working on it: both covers, knobs and front panel were taken apart and given a warm bath with soft shampoo and water, using a soft brush to get the grummy residues out of them. The results were really good and the set now looks very nice (I will put some pictures in my WEB soon).

Then I got into the set (or what remained of it ;-)) with the vacuum cleaner and an small brush to help clean the accumulated dust. I got the power amplifier chassis unscrewed from main chassis, so I could carefully access to the blower to dismantle an clean it. I did also some cleaning on the large heatsink.

I noticed that previous owner had removed the conductive foam from the VCO which is in the upper side circuit. There are some components which will be probably replaced (mainly electrolytics), as they seem a bit corroded. I will look in detail at the VCOs prior the alignment, probably next weekend.

One of the things I have not been able to restore 100% has been the keypad. When I took off the PCB and found the cheapy work in the contacts, I was really amazed... For a $1000+ (in 1989) rig, I expected a better work!. I have got all the keys working, but not too fine. I am looking forward to change the 'switches' with real ones. But I will need a very low profile
switches (probably SMD type) and some work to wire and fix them to the PCB... There is any known solution to the keypad problem?. Any spares around?. I would take a faulty one to try the switch solution, in case it fails. Please, let me know if you have such a keypad.

The handheld mic was also grummy... So I got it in parts and gave a bath to the plastics and an intensive cloth cleaning to the cord and connector. Now it looks again as a mic!

As you can see (if somebody is still reading this boring text ;-)), I like to get the rigs as clean as possible... So you can probably guess what I did with all the cover screws. Yes, I got my 3M 'Tarni Shield' metal cleaner and got them brighting :-)!

Once all was properly cleaned, I reassembled the set. Incredibly, I put all the parts and got no extra screws ;-)!. So I hooked the +12VDC power wire and a triband (10-15-20m) Cushcraft A3 yagi. I put it side by side with my FT-890, which is my newest HF produced rig and is used in my shack to compare all other rigs. Everything I could hear with the 890 was also heard
with the 440... in 10 meters also!. I got the set with a known 'poor sensitivity in 10m'... Where is the fault???. One thing I noticed, though, is that the S-meter reads way too low in all bands. But this is just an adjustment to be done, not big deal.

So the receiver seems to perform fine... What about the transmitter?. Here some small troubles arised: the ALC indication doesn't work (the neddle keeps fixed at zero). Any idea about this?. Also, while checking on 15m with a friend, he noticed I was about 80Hz from the frequency. Not too bad ;-)!

Well, that is all for this first chapter... Hope you don't mind if I write more about the faults repair and alignment in a next one.

Regards,

JOSE

I can answer that. Except for Maxwell (about whose life I know next to nothing), these guys all had workshops and were quite competent technicians. Soldering and other contruction skills are pretty much prerequisites for inventors and experimenters. How else do you test an hypothesis, save by putting a circuit together and running it? Can you imagine how important a good solder joint is in prototyping an *entirely* novel circuit, like the Audion or product detector? Maybe it works, maybe it doesn't, but be very sure that if it *doesn't* that you have failed at the drafting table, not on the workbench, or else you are liable to discard a good working design!

Especially early on, most electronic pioneers had neither the funds nor the confidence of the science and engineering establishment to have a lab full of technical assistants. Morse himself was a notable exception. He had a little money of his own, and was able to persuade his brother to grant him even more to finish his early work. But what impeded Morse more than anything wasn't finances or scientific opinion, but his own ego, upper-class aversion to manual labor, and stubborness. He did little of the drab dirty lab work himself, but got Alfred Vail to do it.

With his hands on the actual telegraph apparatus itself, it was Vail who first recognized the problems with the initial inked-tape system, and it was Vail and an assistant who recognized the superiority of using an electro-mechanical sounder to the original system. It was Vail who developed that apparatus, though it was Morse who took the credit for it. Vail knew and used the original Morse code more than Morse himself did. As a result, Vail came up with a number of great improvements and changes to the code, which Morse fought. It was only after a series of public failures than Morse allowed the changes, in the apparatus and the code itself, to be made. Morse built little, and operated little more, and as a result he had a hard time selling the telegraph and telegraph code to Congress and others, since he really knew little about the system, being responsible mostly for the original concept of an electrical telegraph, not for the actual engineering and development. "What hath Alfred wrought?" might have been a more appropriate first message.

Even the most brilliant theorist and inventor needs to get his hands dirty in the workshop. The history of science is full of examples of men of modest background succeeding fabulously, because they spent time building, operating, and using their creations, where other men with sterling stature and credentials failed utterly: Moveable type, longitude, heredity, avaiation, to name a few subjects. Yes, soldering isn't a very high-order or virtuoso skill, but without it and other manual workshop skills, it is hard to invent and develop new things.

Keith,

Do you know any more details? There is a thread on the CW/QTH listserv right now about blind hams and homebrewing/tuning up tube finals. I would especially be interested in how blind hams solder, and then check their joints. I imagine you can pretty easily rig up a DMM and other test equipment to voice-annunciate readings, but I wonder how you avoid burns and ensure solder gets in the right places and the right amounts, and how you avoid bridges and cold joints. A HW-101 is one thing, but how in the world do the blind work on PC boards?

Hello!

As title says, I am looking for an UNWORKING TS-440S keypad for a restoration project. The condition of the plastic keys is not important; I just need the PCB. One from an R-5000 would also be fine. Please, let me know if you can help me.

Thanks!

JOSE

To answer your question you have someone else do the work, you just
supply the brains.

3770. Re: Which would you choose: FT-100 or IC-706MK2G

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-02 00:00:00 UTC
From: dlr18sh@aol.com
Message-ID: <20000202083543.27122.00001105@ng-ca1.aol.com>
Source record: 86618

I have ben following this discussion and will add my 2 cents. The specs (according to QST review) show the FT-100 being much better all around in the receiver catagory.
The Icom has much more reliable history as they are in the 3rd generation. The FT-100 has pigtales and which could break if you are not carefull plus a loud fan but the DSP has BANDPASS tuning which the ICOM doesn't. The DSP notch is not as deep as the ICOM though. The Noiseblanker is much better in the Yaesu. The Yaesu has the Screwdriver option which the Icom doesn't. I think the reason the Yaesu doesn't sell more is the track record of numerous Hams who have sent back the FT-100 to be repaired many times. Many finally just gave up and got the Icom for reliability. Are the problems solved ?
If you ask the Dealers they always claim Both radios work fine etc. (don't want to get any manufacturer Mad). It appears Yaesu released a radiofull of problems to compete with the Icom 706 mk II G.
I am not sure if the problems are fixed yet but I feel Yaesu should extend the warranty to all earlier owners of the radio since they had to spend $ sending the radio back an forth to Repair center plus the time and agrivation. If Yaesu has faith in the radio then why not a 2 year warranty for all purchases from serial # xxxx or any radio purchased up to this date say 12/31/99 ? It appears if you want the latest technology you pay the price in reliablity.

Source record: 86619

I have not seen a lot of used FT-100 out there but I one that I did see were out of warranty or just about out of warranty. I spoke toa few owners who were honest an told me the radio had been to Yaesu for service but now worked fine for many months. Once the radio is out of warranty then the owner pays the $$ repair bills.

Here is the description of purpose of the following news groups:

>>ec.radio.swap (for buying, selling, and trading; not a discussion group)

>>rec.radio.amateur.equipment (questions, comments regarding commercially-built amateur gear; not for buying/selling)

Some people (who voted Clinton in?) have problem understanding English, trying to behave in civil manner, etc. We hams used to be polite, honorable, self policing and generally helpful bunch. But it looks like bunch of bad apples are spoiling our Ham barrel. You can see it by ignorant insistence on posting stuff that doesn't belong here, defrauding buyers or sellers, etc. Looks like new FCC regulations will only open door for more bad apples and accelerated path to CB like mess.
When few days ago I posted notice about for sale ads not belonging here, and followed with some emails to posters for one day, I got some answers and apologies from few stating that they thought FS ads were OK because they saw them posted here. Some told me to mind my own business and use filters. Internet is a wonderful thing, but also opens the door for mentally challenged. We either try to behave according to guidelines, or decent people will QSY and leave idiots pollute themselves with garbage.
If I want to buy something, I will look for FS sites and I don't need to be told that there is an ad on eBay on all the FS sites. If I am looking for technical information, I will look for the sites that have that purpose. If garbage continues, I will simply unsubscribe, save myself aggravation, and leave it to you "clever" posters so you can enjoy seeing your garbage ad nauseam.
Is it so hard to understand? Those insisting on violating the guidelines paint the ugly picture of themselves.

Hi Gary,

I bought a SS-25 2.5 years ago when I got my 706MKII and both have been on continuously since without any problems of any kind. The switcher is a lot smaller and lighter than an analog supply and does a great job.

Don't be afraid of buying and Astron SS, they're great units.

<big snip>

Beg pardon... I cannot agree with this where ham radio is concerned.
This philosophy has its place in the world, but it also has some nasty
downsides. For one thing, there's considerable satisfaction to be had from
doing things yourself. I know this from much personal experience. For
another, how can you ever trust someone else to do the job EXACTLY as you
would do it yourself?

I have pretty strict standards where construction techniques and
quality of components are concerned. The whole reason I'm pursuing my EE
degree is so I will be able to, with confidence, take my own projects from
idea, to schematic/board layout, to prototype, to debug, and finally to
production (I'm already doing this for myself, but I want to be able to
take that out into the commercial world).

I know it's difficult, if not impossible, to know every single aspect
of every sub-field involved with those steps (example: designing a complex
enclosure would take ME skills), but I don't ever want to be so tightly
specialized in one area that I can't look at what's going on with a
project I started and say "Whoa, why is it being done this way?"

In short: 'Jack of all trades, master of few' is a philosophy I firmly
believe in, especially where electronics is concerned. I sincerely hope
that incoming hamateurs who will be new to the higher classes of licenses
will take it to heart as well.

Am I holding my breath on that? No. But I'm very willing to share
knowledge or skills where there may be questions. I would never slap
someone down, as it were, for wanting to improve on their skill base.

>than anything the military had. Marconi had BUILT some of the military
>stuff. I would hazard a guess they they were pretty good with a
>soldering iron.

I would be very interested in viewing photos of equipment Art Collins
assembled *himself* for the military. Please provide a URL.

I've seen photos of early Marconi gear; he did not solder wire joints.
Metal clips were used to join wires together. Equipment build on a
wooden "chassis" utilized wood screws to join wires together.

Early books on wireless (published within the first decade of the
1900s) contain no chapters on soldering techniques; clips are
shown at wire joints. "The Book of Wireless" by Fred Collins (1915)
shows how to assemble a station from scratch -- again, no mention of
soldering is made -- wire clips wood screws are used throughout assembly.

Your error lies in the belief that the joining of components has always
meant utilizing solder.

Quiz: Can you state the date when soldering was first applied
electronic assembly?

You're making the same mistake Keith makes: Assuming the joining of components cannot be accomplished without soldering. If you analyze photos of very early gear, you'll see wires joined using clips or wood screws (the suggestion of using metal in place of a wooden chassis didn't come about until the October 1922 issue of QST).

A good rule of thumb is: Never purchase a newly released piece of equipment. Wait at least 6 months to a year (all the bugs are usually discovered during this time period) and see what others who have purchased and operated the rig have to say about it. Don't give too much weight to magazine reviews. Remember, those same manufacturers buy advertisement space in these magazines, the fact of which may influence the review. Rather, come to a forum like this one, or like the one at http://www.ehamnet.net and see what the equipment owners themselves have to say.

Hope this helps.

That's right......I had forgotten how much fun it was using my 'wrist rocket' slingshot and rod and reel. Yes indeed 'that' is the mark of a " True Ham ".

Not so. Most R&D folks have their stuff assembled and
built by lower level techs. The cost of an R&D person
is too valuable for basic assembly work.

Yeah, if there is such a thing as a "True Ham", that's gotta be it. I'm
terrible at it. Broke out a window of the neighbors house trying it.
That was a proud moment.

Every year, the night before Field Day, a crowd of local hams gathers to
watch one of our guys launch monofilament over the 80' light standards
at the park. Always a crowd pleaser.

As usual, you have it all wrong. A Real Hamï¿½ is a ham who will climb a 70ft
tower in Minnisota during the winter just to lower his SWR by 0.3

I got a chuckle out of that Jim....never broke a window but had a few times where it was hard to find where the line had landed. Couple times got perfect shots right up over the tree and straight down the other side. Yeah..that is the measure of a "True Ham"

73 / DX thanks for the chuckles

You know there are those Hams that can't sleep well at night if they have a 1.5:1 SWR ! They need to bone up on transmission line theory.

You are right Bill..as a former engineering tech I can validate your remarks.
The EE's I worked for rarely if ever assembled anything.
And really it makes good sense. Gave me the opportunity to hone my assembly and
testing skills which included soldering and we all know soldering is the mark
of a "True Ham" 73 / DX

If this is the kind of bandswitch I think it is, you might check the
ball-and-detent mechanism for dirt, etc. Clean it out and relubricate;
also check the panel bushings where the shaft passes thru.

3804. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <8782od$8fr$1@news.hawaii.edu>
Source record: 86681
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and its
content drifts further and further away from being "on-topic" in the
various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

For Sale

Passive Infrared motion detectors

NEW in box made by Quorum

- powered by common 9 volt battery, 6 month life typical
- emits a pulsed ringing signal on 434 MHz ham band (300'+ or more range)
- tamper switch triggers when cover is removed
- 40' range with variable trigger sensitivity adjustment

Full factory documentation including mods to key an external relay for peizo, etc
Experiment with well made PCB & room inside case for mods. Tested No DOA's

Use your UHF receivers for something new: security during travel, camping, field day, fox hunting, hunting, around your home.

$10.00 each
4 for $35.00

Prices PLUS shipping from 23924
Money Orders or Cashiers Checks ONLY

To reserve yours, email rafman2@earthlink.net.not (remove not) for further details.

3809. ICOM manuals needed

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-02 00:00:00 UTC
From: jdouglas@timewave.com
Message-ID: <8786bc$5pt$1@newsfeed.minn.net>
Source record: 86686

Does anyone have any of the following manuals that they would like to sell?

ICOM IC-728 Owners manual
ICOM IC-728 Technical manual
ICOM AT-160 Technical manual

They are needed by a DX station to repair their station that was damaged by a lightning strike.

I have a adi at-600 and did the software key in mod and all I can get out of
it is 477.320 on receive everything after that blinks.
tried resetting the radio and redoing the mod
I have not tried the other side 2 meter I would guest its the same.

Don't want to do the hardware mode if at all possible

Hmmm . . .I wonder if the idea of a doctor's waiver on the code test
would ever work? ;)

> so long as you allowed the keying means they needed to utilize,
> there should not be much of a problem... it is the receiving that is
> what counts.

I disagree. It is the COMPREHENSION that counts. If you can read it,
you can send it, and this is an award for people who UNDERSTAND the

code, not just those who can memorize a "song."

You can have your mode, Neal. Just don't try to force it on all hams.
You do your mode and I will do mine. What is wrong with live and let
live?

> I use an iambic paddle.

Which requires that same hated digital logic that exists in TNCs.

> Where is anyone having a gun held to their head to use CW, Cecil?

Not to use it, Neal, to learn it. The feds use the threat of force
to compel all HF hams to learn Morse code.

> Deal with it, Cecil.

Already did, Neal, ten years before you were born.

> Are you going to claim that such a situation or circumstance is
> absolutely impossible, Cecil?

Nope, just so improbable that I would be better off storing food
and water than owning a CW-only rig.

Knock yourself out.

> > Have you proved that you are not a rapist yet?
>
> Where do I have any burden to do so, Cecil?

That wasn't the question, Neal. The question is whether you are
capable of proving that you are not a rapist.

> However the statement was that you are an idiot for claiming that you
> cannot prove A negative... not ANY or ALL negatives.
>
> And since I have proven several negatives you are clearly and
> conclusively disproven.

Har dee har har, Neal, in your wildest dreams. I said that mutually
exclusive negatives CAN be proven and that's the only kind that you
have proven. When you prove a non-mutually exclusive negative, get
back to us.

> Irrelevant, Cecil. For all your 'graduate engineering experience' you

HI John -- in Dave Heil's Book "Heil Ham Radio Handbook" -- Melco Publihing -- P.O. Box 26 , Marissa Ill, 62257, he dicusses the problem of using a Hi Z Mic (D-104) into a low impedance mic input (many solid state rigs). He suggests using a 100K resistor or higher in series with the D-104 hot lead. And better yet (I suspect) is using a matching audio transformer. Some where I saw a UTC part for a matching transformer -- but don't know if they are in biz any more. Anyway you might explore these choices.

Keep those LollyPops speaking

another update called tech support for ADI and they said the vfo was not
locking in some radios will and some will not. called the place I bought it
they said we can take it back but there is a 15% restocking fee so to send
it back I'm losing 60 bucks in all I bought. don't know what to do.?

I just cant believe that it cant receive past 476.??? and will receive 800
and up

Mitch

Your best source is the Amateur Radio Handbook of a number of years ago.
They were printed every year, and your local library can bring one in for you
for free. I ran a pair of 4CX250B's on our local repeater many years ago
and it sure had range. Since the mobiles were only using 30 watts, everyone
could hear it, long before it could be worked. The ARRL handbook is a
great source of info on almost any subject re radio. It also will give you
great ideas on parts layout. Used book stores will have them also. The
newer handbooks are pretty well devoted to solid state stuff, and tubes
seem to have fallen through the cracks.

7 3, and good luck.

The hated Radio Shack still sells miniature impedance matching
transformers - I just bought one there a couple of weeks ago... They
work quite well between hi-low impedance loads.

By looking at radios that FT-100 or IC-706 ae compared to, you can form
your opinion.

>Magazine reviews, I would agree with littlejohn_01@my-deja.com, on that
>matter. The same is true for Car magazines, except that in Amateur radio
>there a less Radio manufactures so you realy need to keep everyone happy.

>I would suggest that one actualy compare the Specs of both radios, since
>that is a common ground of comparison.

>Has anybody done this ? Maybe hooked it up to a Comms Test Set and
>checked those values. That would realy tell which one of the two is the
>better RF performer.

For what scenarios? Mobile application? Stationary on 10m , 30m or 160M?
For example, FT-100 compares quite in terms of handling strong signals on
30m but not so well on 160m. One possibility could be worse and wider
bandpass RX filters, and those for 160m in FT-100 may not attenuate AM
signals below 1600 KHz. Strong-signal handling is important for large
antennas but no so much in mobile. Noisy blower is troublesome with rig
close by but not when remote mounted etc... For some hams FT-100 might be
better and for some it will be IC-706. Both have irritating and good
features, and their importance depends on circumstances.

3844. Why Yaseu Ft-847 vs Icom IC-821 ?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-03 00:00:00 UTC
From: Ed <e.cummins@erols.com>
Message-ID: <87cfkkcpi1@bob.news.rcn.net>
Source record: 86510

Is the Icom that much better of a satellite rig than the Yaseu ? The radios are about the same price yet the Yaseu does and covers a whole lot more than the Icom.

What should I do, buy the Yaseu that does it all or buy two radios (to cover HF and VHF/UHF) that will end up costing more money ?

Comments appreciated

Thanks

Ed

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test preparation software for the FCC/HAM plus some Professional tests available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online registration is available--a $30 registration unlocks ALL the questions and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the software. That's $3/test.

This software is based around the same engine that drives our FAA test prep software that has helped many pilots score very highly on those exams. (Yes, we got a new hobby and decided it was time to write software for it, too!)

Thanks for your time. We look forward to your visit!

http://www.dauntless-soft.com

I am Going to try to cut down on the amount of radios that I have because
1. I can only use one at a time.
2. I have too Many.

GE MP-D VHF 136-154 MHZ. This Radio is Programmed into the 2 meter ham band and is a great Radio. New large capacity Battery, Charger and has been converted to a BNC antenna connector. I have had a keypad face installed on this radio but needs a new interface board to make it work. Radio works as a standard non scan MP-D. This radio puts out a little better than 7 watts and I can get into almost all of the repeaters in my area. Oh yes the Radio is intrinsically safe as well as the new intrinsically safe battery (over $175.00) from GE.
$300.00 plus shipping

GE MP-D UHF This Radio is programmed into the UHF ham bands and is as great SOLD
a radio as the VHF radio above. This radio has the standard antenna, a new intrinsically safe battery, Belt clip, and a charger. Standard non scan radio. Just to explain a little about MP-D's for the people that do not know they are 48 channel Alpha numeric radio's . This radio is very wide banded as I have ham and GMRS repeaters programmed into it and it is just as good at both ends of its split.
$225.00 SOLD

GE MT-L UHF This radio is also programmed into the UHF ham band as well as a GMRS repeater. Radio is a 16 channel scan version that has slight wear on edges. comes with charger and new Intrinsically safe Battery and yes the factory antenna. I like this radio it is a poor mans MP-A and works just like an MP-A select. With the new
battery
$250.00 plus shipping

Kenwood TK330 UHF. This Radio is in the 450 - 470 split and is not programmed by me into anything. I can hear my local police on it so I know it works.
Radio is a 10 channel with scan and is programmable. I do not have a charger for this radio I have been charging it on a universal charger just to listen to the Local police. This radio looks great and still has the speaker mic cover over the
connection. 1600 Mah battery and antenna.
$150.00 plus shipping

Icom U18 UHF . This is also a 450 - 470 split radio and I have not tried to get it programmed onto any frequency yet. I have been listening to local businesses on it and finally figured out I was listening to a garbage collection company. Anyway this is a 16 channel scan radio with a radio

shack battery that can be charged with a wall wart charger. Radio is in great shape and will take a large assortment of batteries from commercial and Ham Radio's. And it uses a standard 2 prong
Speaker mic.
$125.00 plus shipping

Maxon 2850 UHF This is another radio in the 450 - 470 split that I have and have not used for anything. Radio is working but not programmed to anything I can pick up. But I can talk to it and hear it with My FT50. Radio is 10 channel with standard Battery and Maxon charger.
$125.00 plus shipping

Mobiles

GE MVS UHF radio This one is in my van right now and is my UHF ham radio.
SOLD
This is a 25 watt UHF wide band radio that will do ham band and GMRS and the
SOLD
best part is it is 128 channels and I have all but 14 programmed into it. Radio will scan 16 frequencies at a time and is another great GE product. The only reason I am selling this radio is I am trying to cut down on the radios in my van. It looks like mission control with all the single radio's. I need to get a dual band radio to take it's place.
$250.00 SOLD

Motorola Mitrek UHF Radio's I have two Complete 50 watt radio's that would make great link radio's as they are 410 - 430 split. I bought these with this in mind. They come complete with cable, single channel control heads, Mic, and speaker.
$40.00 ea.plus
shipping
I just picked up a few used converta-com amp's, Motorola Part number N1274A they are 150.8 - 174 MHz. They come complete with the power connector and a few feet of cable. These amps are 5 watts in 45 watts out and can be tuned down to the ham band. I am trying here before I go to e-Bay. No warranty except No DOA I will test all before shipping.
Price $50.00 plus shipping to your location.

As always I will take trades as well as any reasonable offers
Dean

3859. Timewave Technology Inc. announces a special offer for DSP-232 owners

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-03 00:00:00 UTC
From: jdouglas@timewave.com
Message-ID: <87csj9$ao5$3@newsfeed.minn.net>
Source record: 86525

Timewave Technology announces a special offer for DSP-232 owners

Timewave has announced a trade-in offer for owners of the original DSP-232 Multi-Mode Data Controllers purchased from AEA. This plan allows those owners to trade-in their DSP-232s for the PK-232/DSP Multi-Mode Controller currently in production.

This offer allows you $175 off the price of the PK-232/DSP (with software) bundled package when you return your DSP-232. For those that have upgraded their DSP-232 with firmware or software from Timewave there is an additional $25 savings.

DSP-232 Multi-Mode Controllers purchased from Timewave under the closeout offer are not eligible for this program. This offer is subject to the availability of new PK-232/DSP and may be withdrawn or changed at any time.

To take advantage of this trade-in offer obtain an RMA from Timewave by phone or email. Then send your DSP-232, with a copy of the original sales receipt and $325 and receive a new PK-232/DSP with PK TERM 99 software; that is a $500 value ($499.95 MSRP). If you have purchased the DSP-232 upgrade, PC PakRATT 32.1 for Windows, or PK TERM 99 include that receipt and save another $25 off the $325 price.

PC PakRATT for Windows software is also available in the package instead of PK TERM '99, Just specify PK232/DSP with PC PakRATT for Windows if you need Windows 3.1 software.

If you choose to keep your DSP-232, Timewave is continuing to work on the firmware problems in your DSP-232 and if any of the remaining DSP-232 problems can be rectified those upgrades will be announced as they occur.

See http://www.timewave.com for further details.

I believe the preamp is FET's low impedance 10K output.
They work on anything.

No..they are not FET's. Each stage is a 2N2712 NPN transistor.

3866. FS R390A

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-03 00:00:00 UTC
From: picture@means.net
Message-ID: <picture-0302001541510001@209.105.118.181>
Source record: 86532

I have an R390A (URR) that I have owned and operated on and off for the past 18 years. The unit is complete including all meters, original knobs, antenna relay, etc. Everything works. The known problems are that the turns counter for the frequency display is getting a little rough at the band edges. Also, the unit needs an alignment as frequencies below 10 MHz do not receive well. And, the unbalanced antenna input connector has been soldered around the outside. It has all filters accept the 1600. I am not aware of any mods having been performed. I would prefer not to ship this unit due to its weight. I am located in NW Minnesota, but will be in Minneapolis Feb. 9-11 and could bring it with me. I also have a very thick and complete service manual that I paid $45 for on ebay. Asking $500. e-mail please. Greg

>Bill, N2EUD
>

Hi Bill,

You are not alone. My AR-247 has the same symptom. I discussed this
with ADI and they mailed me a kit to resolve the problem. It involved
changing a 220k surface mount resistor on the DTMF module to 470k, and
changing several resistors in the mic unit. Well, after making the
modifications, it still sends the string of tones until the radio
warms up. The easiest way to get around the problem is to set each
memory channel up WITHOUT the tone setting. For each programmed
channel, press the TONE button until the little T on the display
disappears. This stops the problem, but of course, if you need PLL it
will be disabled. Since only one of the repeaters I use requires PLL
at times, I simply entered that frequency into memory positions right
next to each other. One is set with tone on, and the other with tone
off. That way I can slide up or down to engage the PLL. if it is
needed.

If anyone has a better solution, I love to hear it too!

3872. quick release bracket for 450

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-03 00:00:00 UTC

Does anyone know if Kenwood makes a quick release mobile mounting bracket for the TS-450? I have been told that 450-430 models all use same bracket. If you should happen to know where I can get the part number I would appreciate that too. Pacific Parts telephone lady don't have a clue what I'm talking about.

Reduced requirments to get into ham radio can be a positive. I for one dont want to see additional portions of bands sacrificed because we dont have the numbers to justify our exisitence somewhere in the frequency spectrum. How much clout is ham radio going to have in 20 yrs when a huge number of our members will be silent keys? I know a lot of good solid people who havent participated in ham radio because of the code requirements. I will definitely enjoy talking to them after they get their licenses. I hope more folks start to think of this as beneficial to amateur radio. Thats my view, my 2 cents,,for whatever its worth. Take care you guys,,

I guess you have never heard of Q-Signals, eh?

With those I have managed to have reasonable QSOs with ops who I could
never have communicated with at all by voice.

And therefore since you claim we can have the same QSOs in cw that you
can with PACTOR why not just save all the extra BS involved with PACTOR
and just do cw and chuck the PACTOR mode, huh Cecil?

You just cannot seem to wrap your pitiful little mind around the concept
that not everyone prostrates themselves before the Great God PACTOR as
you do.

Personally I can just email someone in almost any language and just use
one of many conversion programs. Far from perfect but they generally
get the basic concepts across.

So why bother with PACTOR huh Cecil?

```

> would ever work? ;)

Why would such be needed? The concept is if you can receive 20wpm you
understand the code and can send.

Just being able to send is no measure of if you can receive.

And there should be no waivers.

> > so long as you allowed the keying means they needed to utilize,
> > there should not be much of a problem... it is the receiving that is
> > what counts.

> I disagree. It is the COMPREHENSION that counts.

If you can receive, and are not a braindead moron, you can comprehend.

> If you can read it,
> you can send it, and this is an award for people who UNDERSTAND the
> code, not just those who can memorize a "song."

Of course, but receiving a QSO at 20 wpm when you do not know what the
QSO is is a comprehension test, not a memorizing of a song.

> You call your wienee call superior? BWWWWHHHHAAHHHAHAHHHHHAAA

Quite. I have yet to see DX stations send QSLs unsolicited from a US
ham with a W6 call, Cecil.

A WR7 on the other hand... well, I have received massive numbers of
SASEs from DX stations AND US hams.

Considering there are just about 25 other hams with the prefix, and some
of those are not particularly active.

And then again, my 2x1 is superior to yours, Cecil, because I am an
Extra and you are not.

Deal with it.

And no matter what you do, Cecil, I was an Extra 12 yrs ago... you will
not, barring a time machine, be able to alter that no matter what you
do.

> > And you have not disproven or discredited a single thing I have
said,

> Why should I try to do that, Neal?

I agree... it is difficult to disprove the truth.

> I'm just having fun.

If you consider being proven conclusively to be a lying, lazy, idiotic
delusional fool, then more power to you, Cecil.

> Have you proved that you are not a rapist yet?

Where do I have any burden to do so, Cecil? I have not claimed I am not
one... you are the one claiming I am, by implication if nothing else.
The burden of proof is on you.

However the statement was that you are an idiot for claiming that you
cannot prove A negative... not ANY or ALL negatives.

And since I have proven several negatives you are clearly and
conclusively disproven.

> > And poor little Cecil just cannot seem to deal with it... poor baby.
>
> Strange thing for you to say to someone who already had four
> years of graduate engineering experience when you were still
> $hitting all over yourself.

Irrelevant, Cecil. For all your 'graduate engineering experience' you
certainly did not seem to do much with it. How do you explain that I
have been an Extra for 12 yrs and you are... well, you are Cecil... need
I say more?

I too have been following this discusion for probably over a year now. One interesting things accoured to me, the way people judge radio equipment performance.

Somewhat a response to the last two articles, those bits pasted below :

First too many judge the radio simply by using them. That sounds good except that the variables introduced through antenna matching, propogation conditions, personal experience (what are you comparing against) etc skew this judgement ability. Many said the FT-100 was as good or better or not so good when compared to my old rig XX-xxx. Sure I believe that, but it remains subjective.

Magazine reviews, I would agree with littlejohn_01@my-deja.com, on that matter. The same is true for Car magazines, except that in Amateur radio there a less Radio manufactures so you realy need to keep everyone happy.

I would suggest that one actualy compare the Specs of both radios, since that is a common ground of comparison.

Has anybody done this ? Maybe hooked it up to a Comms Test Set and checked those values. That would realy tell which one of the two is the better RF performer.

Hey thats my 2 cents.

With regard to a test specification comparison, the information on each of these radios is available from the ARRL web site in the form of product reviews, as well as from the QST product review articles. This is probably the best service that the ARRL provides to amateurs from a technical standpoint.

I have used this information to compare several rigs of interest, including the FT100, IC706MKIIg, and FT847. I selected the Blocking Dynamic Range, Third order IMD and Third order Intercept parameters as most interesting to me. I made a chart of each of the radios of interest using 20 meters for HF and 6,2,and 432 VHF. As one would expect, you get what you pay for. The numbers for the FT100 are better than the IC706 on HF, and a bit worse on VHF/UHF. Neither of the rigs hold a candle to a good HF or VHF only rig, but they do the job that they were designed for.

Bottom line is that the information is readily available to do an apples to apples comparison. Spend a few minutes with a calculator, and see for you self

Mike, until the mfg's get the dsp in a real IF (455 or higher and inside the agc loop) not a created one for dsp will you see a real improvment in receiver performance and I dont see it happening, cost is the big factor I think.
I have tried all the current so called dsp radios and the dsp has not impressed me except for the auto-notching feature and that can be done with a NF-60 for around $65.
Save your money or check the ARRL lab reports for the best receiver performance and get that one. dj

A friend of mine uses one in his mobile and absolutely loves it. It's really a sharp looking little rig in my opinion, and for the price you can't beat it with a stick. So far all the reviews posted on http://www.eham.net in re: the HTX-10 have been very positive. I use an Chipswitched Uniden HR-2600 (gives me 12 meters as well) in my pick-up truck, but I've been seriously considering buying one of those HTX-10s just to have as a back-up.

Message-ID: <3899723d.0@news>
Source record: 86573

Excellent condition Kenwood TS-940-AT with SP-940 speaker and MC-60 desk mic.

This radio has the Jack Gile chip installed and the 850 filter mod. done by Jack himself.
It was sent to IRC last July and pin diodes were installed to reduce the noise floor.
They also did a "Super Tune" and alignment.
This trip to IRC cost $460 and greatly improved the already good receiver characteristics.

This radio is in excellent condition mechanically and electrically.
It is just about as good as one can get.

I have all the paperwork documenting the mods, the manual, and original box.

$1300 is the firm price for all three items.

William Lee N5WRX

Hi Jay. With mine I tried several external speakers, settled on a
Rat-Shack patio speaker, cat.#40-1227A. Big improvement over the
internal. Also, turning off the noise blanker will remove much of the
distortion found on strong signals.

Something else to play with is an old auto(12 volt) stereo graphic
equalizer/amp. A 7 band version at least. You can taylor the audio
to just what you like with this setup. Very good at filtering out
annoying sounds too.

While single hetrodyne tones can be easily notched, it gets much more
difficult to remove multiple tones, or tones that wonder around.
DSP does a great job on those. I have a older Tandy DSP that I paid
$10.00 for on closeout and it does a great job on multiple tones.
My PCR1000 has the add in DSP module and it does a better job than the
Tandy.
But even the best DSP is not going to make any signal burried under
a mountain of noise "arm chair copy". At least for me I get tired
after digging out the really well burried signals after an hour or so
and have to take a break. And no amount a filtering, DSP or older
analog, can really extend that time very long.
Good luck on whatever choice you make.
YMWV

I also contacted QST and asked them if there is some way they can rate a radio on reliability. MY suggestions is to have the radio work fairly hard for a while without breaking down instead simply having the top cover removed and receiver measurements taken. Also, I have worked for a number of manufactureres (not ham radios) but the rule is the same. I would say it takes at least a FULL year to get the bugs out (no less). Another benefit is theat the price always comes down so you get a
more reliable radio with all the MODS done plus a better price than the guy who "HAD TO BE THE FIRST ON THE BLOCK WITH RADIo".

Because most of my friends are on PACTOR, Neal. Guys like you won't talk
to me on CW. I use a straight key at 10wpm. Real CW operators use straight
keys. What? You use a ***DIGITAL*** electronic keyer? You use the electronic
logic system that you absolutely hate? Go figure.

> You just cannot seem to wrap your pitiful little mind around the concept
> that not everyone prostrates themselves before the Great God PACTOR as
> you do.

I do not advocate using threat of force from the feds to promote PACTOR,
Neal, but that is exactly what you do for Morse code. I believe in live
and let live. You obviously do not. What kind of balls does it take to
try to control my choice of modes? If you want to do CW, then do it.
I will do whatever modes I choose to do or none at all, thank you.

> Personally I can just email someone in almost any language and just use
> one of many conversion programs. Far from perfect but they generally
> get the basic concepts across.

> So why bother with PACTOR huh Cecil?

When the big emergency happens, telephone lines are down, and internet
connections are severed, I'll be able to contact PACTOR II stations that
I can't even hear on CW and transfer more information without an error
than I ever could on CW.

Sorry, Cecil, but I am not whining. I have nothing to whine about. I already have my Extra. You do not.

I am merely exercising my first amendment guaranteed free speech rights to state my opposition to the actions of the government toadies and my reasons for such opposition.

You are not required to like what I say or to agree with what I say, Cecil.

I am not forcing you to do anything.

So what, again, I ask... is your problem, Cecil?

Projecting? You should know all about that now, shouldn't you Cecil?

ROTFLU!

What stand are you using with the D-104, T-UG8 or T-UG9? The T-UG8 is a straight through connection and has a very high impedance off of the crystal which does need an impedance matching network. There was an article in QST early last year, around the February to May timeframe, about building such a circuit. If you have a T-UG9, it has a built in amplifier and an impedance around 5K. It matches very well as-is. In fact, I am using my T-UG9 with my Yaesu FT-757 GXII without any additional circuitry and it works great.

Is there a wide-band DSP, say up to 6kHz audio?

I've stuck to the Grove Sound Enhancer with its analog notch
because it has the wide bandwidth necessary to pass good audio
through.

Taking out a het automatically is not worth chopping the signal
down to 3kHz bandwidth for the slow DSP performance.

How ham radio is regulated has nothing to do with personal survival or species survival. Better luck next time.

No one has YET shown how this BS of theirs is better for anyone except two groups:

1) NCI type whiners who refuse to work for what they want, preferring to whine for what they want, and who sit there holding their breath and stamping their little feet until the FCC wimps cave in and give them what they demand, and

2) Commercial interests who could not care less about ham radio and fall into two groups... those who seek to sell more radios to increase their bottom line and those who slaver over the idea of ham radio's demise so they can turn a profit from what they generally considered unproductive resources.

Sorry, but I for one am not interested in benefitting EITHER of those groups.

And ham radio suffers either way.

Some 'improvement'... NOT!

Bull Sh*t, Who ever said a change for the worse counted.
Example:
Here in New York we have the still married wife of a unconvicted rapist, liar, adultery committer and her team of Hollyweird freaks and screw ball's. All scripting a freak show using an *acquired empty house* to make her a senator..... to make things better, LOL

She has never been on the subway or come to see her *new* favorite New York ball, and hockey team's in fear of getting the Bronx cheer as well as Booed on TV.
Yet Rev.Al (a frequent guest of every jail) and the hordes work capable healthy welfare dwellers, homeless felons, ileagels and feminist's love her.
That is can not be good a good sign, its common sense.
Keep liberals out as long as you can.
NO THANKS !

If you have one of the stands with the 2 -stage transistorized amplifier in it you are all set just plug and play. That common emitter stage in the base can drive a wide range of impedances. I use the amplified stands here with a Kenwood TS450 and it works fine. Others I know use them with the Yaesu FT840 and get audio reports. If you need any technical data on the Astatic line I have a link to them on my website.

As a teenager at the time price was a consideration for me. Raytheon's CK722 was $.99. Another affordable transistor at the time was the GE 2N107 which was a little more at $1.25. Used to ride my bicycle to Henry Radio to get them. That's when Henry Radio was a COOL place.

<snip>

> Anyone want to express opinions regaring building all the coils and capacitors out of raw materials and junk? Like chewing gum wrappers??? Oh, that'd mean I'd need a TR switch setup to isolate it during transmit... hmmm. Dratted QRM.

Since the stuff I snipped had no mention of any specific construction project, I'll assume you meant the traps for your gravity-inverted vee.

Why not? As I've mentioned here (RRAA) before, Hams used to be able to build their own _tubes_! Tasks like winding coils and stacking caps are cake compared to glassblowing, and much safer (silicosis).

There is the problem of assuring value stability once the parts are built. You can calculate of course, but edge effect creep in with caps, and inductors like to "grab" nearby magnetic materials and change their values. Coils are fairly easy to tweak if you make provision for that during construction, but trimming a homemande cap can make you crazy. Choose wire size and foil/dielectric for power-handling capacity, and go for it. Oh, and don't worry about the smoke, it's traditional ;>)

I have decided to cut back on my VHF work, and devote more time to HF.
Therefore, I am selling the following:

Yaesu FT736R, with 222 and 1296 units. Also has encoder. This unit is in
great shape, other than the handle, which needs to be put back on. This
would take a screw, and one of the plastic fasteners. Asking $1625.

I also have a 24 ele loop yagi for 1296. Boom is 5 feet long. center
mount. Asking $80. I have a 75 foot run of 9913 with n connectors for this.
Will sell for $60.

>snip of Jose's fun<

Jose,

Keep posting. It always amazes me what a little soap, water and elbow grease will do to improve the looks of stuff. I really get a kick out of taking a 'grimy' radio and making it look if not new, at least nice.

Bill:
I have an 850 also. Mine is working fine, but I also have a service manual.
Do you notice the power change while using a dummy load? I have noticed power
changes while using one of my antennas, but not in a dummy load. Could be an
SWR situation. Give me details.

Hi...
My club have ICOM IC-745 HF transceiver.
Everything works fine, except on CW, when transmitting
there is constant signal, event if you just turn send key on,
or doing keying with keyer..It is constant signal on
transmitting frequency when you are on the air using cw.

Anyone have idea about this??

Also, we find burned transistor Q10 on B777B board.
Maybe this could be a reason??

Thanks for answer...

73's de Chris, 9A4KK!

HI John -- in Dave Heil's Book "Heil Ham Radio Handbook" -- Melco Publihing --
P.O. Box 26 , Marissa Ill, 62257, he dicusses the problem of using a Hi Z Mic
(D-104) into a low impedance mic input (many solid state rigs). He suggests using a
100K resistor or higher in series with the D-104 hot lead. And better yet (I suspect) is using a matching audio transformer. Some where I saw a UTC part for a
matching transformer -- but don't know if they are in biz any more. Anyway you
might explore these choices.

If the D-104 in question has one of the more modern stands (post-1970's) then it may well have the transistorized amp in the base and requires no additional matching to drive low impedance mic inputs on today's HF rigs.

The GT-34 was also affordable at $.99. I was getting $0.50 per week allowance. I used some of each for audio amplifiers. The GT-34 generally had higher gain. I had to ride six miles by bike to get parts (Electronic City at Mid- Island Plazza or Electronic City (store name?) at Rosevelt Field Shopping Center) or wait to Saturday and take the bus to go to Hempstead at Standard Parts. Once in a while you could get wet slug tantalum caps (Mallory) at charity prices (100 piece prices) from Rosevelt Field Shopping Center store. This was about 1954,1955 and I was 12 years old. All this was on Long Island.

In other words, all of this negative thread about Ebay was pretty much a waste of time. The REAL bottom line is: If you pay more than something is worth, period, you're kinda foolish. If you can get more money from someone else than an item is worth, then more power to you. And the other fellow MAY be kinda foolish.

But of course, that goes with buying/selling anywhere.

I'll never understand this pent-up rage against Ebay by a few folks. I've just GOT to find out where Ebay gets all the staff to hold all these guns against people's heads...

Bill

3957. Yaesu 2600M vs. Icom 2100H

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-04 00:00:00 UTC
From: pablogutierrez@my-deja.com
Message-ID: <87dg6jccs1@nnrp1.deja.com>
Source record: 86457

I'm stumped! Is the Icom 2100H or the Yaesu 2600M a better radio?
They both had bugs early on. The Yaesu with firmware bugs and the
Icom blowing out finals. A VE told me the Icom doesn't stay on
frequency and that it often has less than spec'd power.

If you were buying today, which would you choose?

Thanks in advance!!

And none of mine are... they are all on CW, Cecil. So why should you
and YOUR friends get your mode, and me and mine not ours, hmmmm?

You just do not get it, do you, Cecil?

> Guys like you won't talk
> to me on CW. I use a straight key at 10wpm. Real CW operators use
straight
> keys. What? You use a ***DIGITAL*** electronic keyer? You use the
electronic
> logic system that you absolutely hate? Go figure.

I use an iambic paddle. I do not use a TNC, Cecil. I can also use a
straight key but send better with the iambic paddle.

And as soon as you are elected god of the universe I will give a rat's
red rump about what you think.

> > You just cannot seem to wrap your pitiful little mind around the
concept
> > that not everyone prostrates themselves before the Great God PACTOR
as

PACTOR,
> Neal, but that is exactly what you do for Morse code.

Where is anyone having a gun held to their head to use CW, Cecil?

Your statements get more and more moronic and delusional every day.

> I believe in live and let live.

They hell you do, Cecil. You are clearly lying again.

> You obviously do not.

Sure I do... I do not force you to use CW any more than anyone forces me to use PACTOR. However I had to learn how to effectively use PACTOR to get my license, and you should have to learn how to use CW to get yours. No one is forcing you or I to use those modes.

And learning how to use CW effectively requires the code proficiency test. Just like learning how to use PACTOR effectively required the part of the theory test.

Deal with it, Cecil.

> What kind of balls does it take to try to control my choice of modes?

My what a delusional paranoid you are proving yourself to be, Cecil. You seem to think there are jackbooted gun toting CW Police around every corner, under every rock and in every tree out there just to force YOU, Cecil, to use CW.

You know, Cecil, you really should take your medications...

> If you want to do CW, then do it.
> I will do whatever modes I choose to do or none at all, thank you.

I have never mandated or tried to mandate anything else, Cecil. Where have I ever forced you to utilize CW in your daily operations?

However you should have the skill to USE it, just like I should have the skill to USE PACTOR. (Though once it is set up a trained CHIMP could use PACTOR... one of the Appliance Operator modes).

> > Personally I can just email someone in almost any language and just use

> 73, Cecil, W6RCA http://www.mindspring.com/~w6rca

Assuming, of course, the computers are all running, the TNCs are all functioning, the higher priced and more complex rigs are having no problems at all, etc etc etc.

And in the situation where you do not have each and every piece necessary for your pactor spiderweb of technology and only have the means of communicating via CW or not at all, you will remain utterly

useless.

As usual.

Are you going to claim that such a situation or circumstance is
absolutely impossibly, Cecil?

Are you really *that* moronic?

> I know of. Some experiments may call for soldering,
> but that's maybe the extent of it.

A good analogy would be requiring CS majors to demonstrate proficiency and efficiency in keypunching (or I suppose, keyboarding is the up-to-date word).

They may indeed need to know enough to struggle through it [not accurately the first time, or rapidly, or by the 'book' unlike a career data entry operator, perhaps] in order to get an assignment or project completed ..... in fact they could probably hire someone else to type it in for them, and not violate any class rules assuming they wrote the program themselves, etc.

But to require 100 characters per minute (or whatever) speed with < 1 % errors, for example, in order to obtain a BSCS or MSCS degree is ridiculous. So it is for soldering and EEs, of course.

Now then, employers are always free to add good soldering to the list of requirements for a particular job, or make successful completion of a training course in that a prerequisite for continued employment or advancement, but that is another matter altogether.

Some guys think that mast size is directly proportional to . . .

However, I somehow doubt that too many ladies would be impressed if they
found out that a guy's "mast" diameter was 1/40 of its length.

Yep. Which is an entirely different animal than the canned FCC exams. There aren't that many tests, and there aren't that many questions on the test. When you recognize which test you have, then it is simply a matter or remembering what is ON that test.

This was a popular method of passing the Extra not too long ago.

3977. Kenwood TS-930S Power Supply Regulation

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-04 00:00:00 UTC
From: mlinden@indramat.com
Message-ID: <87emsg$656$1@nnrp1.deja.com>
Source record: 86477

I've just completed replacing some bad power transistors in the regulation circuitry for the 28v transmitter power supply of a Kenwood TS-930SAT. Before the repairs, the output of this supply would actually climb from 28.5v to about 34v when I placed the unit into transmit (the meter light would get visibly brighter!).

After getting the new power transistors in I adjusted the supply output to 28.5v at receive -- the service manual specifies 28.5v +-0.3v. Now, when I go into transmit at full CW output (about 130w) the suppy's output drops to about 28.23v (a drop of 0.27v). I'm just wondering if this line/load regulation is "within spec" (the drop of 0.27v). The service manual doesn't give any specs for the degree of regulation.

While this drop in the output voltage doesn't seem really bad, I'd just like to find out if it is normal. If it is not normal it may indicate that there are other problems with the regulation circuitry that need to be corrected.

I've also noticed that when I start the rig up cold, the power supply's 28v output crawls from about 28.1v to 28.5v as it warms-up. On a cold start, the signal unit's (accessories) fixed-output power supply (which should be at 21.7v per the service manual) crawls from about 21.6v to about 22.4v as the unit warms-up.

Is anyone familiar enough with this supply to tell me whether or not this behavior is typical?

Any input would be appreciated.

Thanks, Michael N9BDF

I've been looking at both and leaning towards the 2100H. I read the
new and old postings in deja news about the 2100H and saw some
complaints about the early ones blowing finals. I didn't see a single
complaint about off frequency or lower than spec'd power however.

Been using mine for almost a month now and except for a very stingy (won't go above 5 on ssb) meter, I really like it. I've talked to Japan, Cuba, Trinidad/Tobago, and all over the states with it and have had excellent reports from the other end. I run the mic gain at about 11-12 o'clock as this radio has alot audio. As a mobile, its small, works great, and you should have a great time with it.

You're changeing the subject instead of answering the question, Robert. The subject is not about change. The subject is about why a date is a reason for change.

What does a date have to do with change? Why does a date justify change? Why do people say, "its the year 2000," to justify the change they want, when the year 2000 is a date, not a reason?

It would make just about as much sense to say the sky is blue, so we have to change ... (insert whatever). There is simply no connection between the two.

SWR is an antenna thing.
Antenna SWR is best checked with a device like the MFJ - 259 B antenna analyzer.

Power is a radio thing.
Output power is best checked by using devices like the Para Dynamics PDC9 or the DAIWA CN-460M watt meters. These meters will also show the SWR of the antenna system.

Visit your local Radio Shack cauze if You got questions - They got anwers.
Unfortunately most of the answers are "I dont know".

I have a Hallicrafters SX-62 receiver for auction on eBay.

The URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=253218957

and the blurb is

This is a very restorable example of the venerable Hallicrafters SX-62 receiver, which offers continuious coverage 540 kHz thru 109 mHz. Controls are pointer reset, band selector, receive/standby switch, crystal calibrator on/off, noise limiter, tuning, volume, reception (mode) control including phono input, selectivity (3 crystal positions and 3 LC filter positions), tone control, and sensitivity (RF gain) control. This is a true high-fidelity superheterodyne receiver, with a pair of 6V6's providing an honest 10 watts of superb audio. The giant sliderule dial features a back-lit display that illuminates the band selected, and the flywheel tuning mechanism provides silky-smooth station tuning. A very impressive looking receiver, which receives AM/CW/(SSB with careful tuning !) up to 32 mHz, with FM also 27 - 109 mHz. This particular all orignal example is in reasonable cosmetic shape, although the cabinet could use a repaint and a previous owner engraved his/her SS number inconspicously in the corner of the bezel, which has some rub spots. The bandswitch knob is starting to crumble and should be replaced; otherwise the radio presents well. I started this restoration by verifying that the power transformer is good, and that a couple of tubes need replacing, but I didn't get much further than that in a year so I figured it should go to someone else for completion. As with all old electronics, this is sold as-is, although I will guarantee that the power transformer is good. This should restore well and be a worthy addition to someone's collection; once you hear the wonderful audio and experience the ease of using this wonderful old radio, it could well become your favorite. Includes a copy of the manual and Sam's Photofact Folder.

Closes 2/13/00.

Thank-you.

I use a MFJ-812B. This is a compact and inexpensive ($30) SWR/Power Meter. It covers both 144mhz & 220mhz. Two power ranges of 30W & 300W. A 5W HT gives more than sufficient output for SWR readings. I've used it to tune up both my mobile and base antennas. Works good. The power output readings closly agree to the three output settings of my IC-2100H, so I know I'm in the ball park. A more expensive meter or antenna analyzer would be nice, but if you're not into serious antenna design and building, I think they are a waste of money.

3989. Raytheon CK722 and other early transistors question

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-04 00:00:00 UTC
From: Allan Pellnat <kx2h@worldnet.att.net>
Message-ID: <PoBm4.1322$Ks4.25961@bgtnsc06-news.ops.worldnet.att.net>
Source record: 86489
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

I'm doing some research for an upcoming display of the history of the transistor and transistor radios for the AWA Electronic Communication Museum.

It seems that the general opinion is that the Raytheon CK722 transistor was the first mass produced for general consumption. However in poking around in some old Allied, Hudson, et al catalogs for 1953 I find some others listed. For example:

Allied Radio Catalog #131 for the year 1953, page 55, the first offering of transistors, lists 3 types available from either GE or Raytheon. GE G11 and G11A are Germanium Point Contact types. The only difference between them is that the G11A is □additionally tested for operation in trigger circuits□. Raytheon has a single type CK716 Germanium Point Contact.

Hudson Radio & TV Corp Catalog #H-53 for the year 1953, page 65 Shows same as Allied Radio #131. Same catalog, page 190 shows five types from Transistor Products Inc. They are Germanium Point Contact identified as types 2A, 2B, 2C, 2D and 2E.

Newark Electric Catalog #53 for the year 1953, page 65 Shows same as Allied Radio #131.

Then in 1954, Allied Radio Catalog #135 for the year 1954, page 63. Adds RCA to the manufacturers offering two Point Contact and two Junction types. The two GE types are the same as listed in 1953. Raytheon now lists three types. The CK716 is the same as in 1953 and two new types CK721 and CK722, Junction type transistors are added.

The following year, 1955, the CK716 was no longer listed.

So the question is who was first, GE, or Raytheon?

What happened to the CK716?

Allan Pellnat

I think a bit closer analogy would be to require CS majors to be
able to key in a program on a PDP-8 or similar machine to
bootstrap it.

They'd be required to know how the concept works, know the
theory behind it, and know the application.

But why grade them on speed?

Hi Guys;
For Sale, was part of an estate so condition was unknown at the time.
IFR model #A-7550 Spectrum Analyzer, S/N 4248, tags says Options 06 USA ,
106-266 VAC, 50-400 cycles.
There is the unit only with AC power cord, nothing else.
The unit does not light up at all, further inspection shows a power supply
problem in the PS Module which is replacable or repairable by the right tech.
The cabinet is fine but there is a lot of internal oxidation on internal Covers
and shields even though it was serviced in '97.
I am not a tech and have no experience with this stuff although I see them
being sold currently for $4995 by Test Gear houses.
I am asking B/O, please remember that I am also paying shipping and this thing
is heavy.
My misfortune may be your fortune so please consider a fair offer.

What you think of idea of realization of radioexpedition on Southern Altai?

Southern Altai - highland is on the board of Kazakhstan, Russia, China and Mongoly.
Land of lakes and waterfalls, mountain taiga and stormy rivers, deserts and snowy peaks...
In time of Soviet Union this territory had been absolutelly inaccessible for foreign tourists (and furthermore for radioexpedition) - in locale
It is not enough of ham stations.

The base camp of expedition is planned to place in region by highest Fastigiums of Siberia and Altai of a mountain Belooha, lake Markakol and Zaisan.

If you were interested by our proposal, we can be found on ranges 21Mhz, 28Mhz call sign UN8JZZ (collective radio station)

4001. FOR SALE Mizuho QRP HF SSB & CW transceiver. Model MX-3.5S, 80m

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-05 00:00:00 UTC
From: al@boltons.demon.co.uk
Message-ID: <389c0bd9.4130656@news.demon.co.uk>
Source record: 86301

FOR SALE Mizuho Pocket QRP HF SSB & CW transceiver. Model MX-3.5S, for 80m. Located Berkshire, England but will ship.

Features a variable crystal oscillator which can be shifted 25kHz on 80m per crystal. Provision for 2 crystals on board. I have a spare genuine Mizuho MZ-X crystal to be included with the set. The 3 crystals give you access to both both CW and SSB band portions in Europe but you may need another crystal if you are outside Europe.

The set can be powered from internal dry cells (battery holder in as new condition), from Nicads or from an external 9.6V source. An analogue S-meter and noise blanker is included as well as a 'button' type Morse key. There is also a built-in microphone. It has 2W output and a very good receiver.

This particular set is in very good condition with only some light scratching on the back of the silver case. It comes complete with all the operating instructions (in English AND Japanese!) as these are often missing as well as a box. Also included is the matching and rarely found Mizuho AN-3.5 telescopic base-loaded whip aerial.

The whole lot would cost you 300 Pounds/500 Dollars new-I'm looking for offers around 160 Pounds/250 Dollars please, shipping anywhere a pleasure (you pay cost) or will deliver within a 50 mile radius of Reading in Berkshire, England.

If interested, please Email me at:

al_bolton@hotmail.com

Thanks,
Al Bolton G4VSQ/OK8VSQ

4002. Re: FA TMC VFO Model VXO

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-05 00:00:00 UTC
From: John Mackesy <mack@melbpc.org.au>
Message-ID: <87h53l$qk2$1@possum.melbpc.org.au>

About the TMC VFO - I've got one of these, serial no 1000. Similar to the article FA, but somewht different (later?) - mechanical digital freq display, different panel layout. Does anyone have specs and/or circuit? Mine works, I've rebuilt the heaters, but could use some info on heater control wiring. It's huge and heavy thing, but (I guess) it has its uses.

4003. Questions about FT767

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-05 00:00:00 UTC
From: Marco Eggert <m.eggert@arcormail.de>
Message-ID: <389C16AF.6E21D2C0@arcormail.de>
Source record: 86303

Hi everybody!

Im looking for a used Yaesu FT767.
Before buying one, I did like to hear some comments and ask some
questions...

Here we go:

- What is the difference between the Ft767 and the ft767 GX ??
- What is the output of the 2m/70cm modules?
- Is the quality of the 2m/70cm part good?
- What should i look for when investigating the radio?
- Any typical Problems?
- Any Ser.No.ï¿½s to avoid?
-

Is a 767 with 2m/70cm modules installed $1100 worth? (havent seen it
yet)
or should I choose a FT726 and a IC737 costing about $1300 instead?

Thanks for your help and vy 73ï¿½s

4004. Re: UPDATE MY KENWOOD TS950SDX ???

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-05 00:00:00 UTC
From: Keith Hester <ks9c@chorus.net>
Message-ID: <389C16BF.4D3B3E99@chorus.net>
Source record: 86304

Hi Ron,

Unless you are aware of a specific anomaly, I strongly suggest that you
do nothing. If the TS-950SDX requires any tweaking to restore it to
normal operation, I am quite confident that the problem will be
well-defined and not subtle.

You are correct as to the date of manufacture.

Regards,
Keith (KS9C)

4005. TS-440S restoration (II)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-05 00:00:00 UTC
From: "JOSE V. GAVILA (EB5AGV/EC5AAU)" <eb5agv@ctv.es>
Message-ID: <389C198C.A1691F32@ctv.es>
Source record: 86305
Cross-posted to: rec.radio.amateur.equipment,uk.rec.radio.amateur

Hello!

I have been working on my TS-440S and have found some interesting things... Forget my previous comment about the rig working fine in 10 meters. I was wrong (my ear calibration was definitely expired!)

FYI, the basic setup I am using to troubleshoot the rig is: Tek 475 oscilloscope, HP-8640B signal generator/counter, Fluke 77-II DVM. I followed the technical manual procedures to align VCOs and PLLS and they were almost fine, just needing a bit of tweaking to get the published voltages. One thing that took me some time was the DIP switch in the control unit and its relation with the IF SHIFT alignment... As in the tables they just tell to adjust the signal in VCO4 to 456.875kHz and I couldn't reach this value with the adjusting pot, I looked for a trouble in the pot or in the associated circuit. But nothing was wrong... Then I recalled something about the DIP switch and USB/LSB... and bingo!. The DIP also works on RX, shifting the VCO4 signal. So I did some math and adjusted the pot to get what I thought it was right. Later I confirmed my math was right, as the SSB signals sounded fine at the IF SHIFT detent point.

I followed also the RX alignment and found a coil way out alignment, L18 in the IF unit. After the RX alignment, I checked the receiving section doing A/B comparisons with my FT-102 (which has a hot receiver). The TS-440 was very close in all bands... except 10 meters!. Some signals which were about 3/4 S-meter units in the 102 were lost in the 440... As the S-meter in the 440 was calibrated at 14.175, I checked it at -73dBm (50uV) in all the other bands... Here you have the results of some of the test I made:

Freq. (MHz) S-meter
29.500 8
28.500 6
27.500 7
26.500 9
25.500 9+2dB
14.175 9
7.000 9+10dB

As you can see it seems fine except for the 10/11 meter bands. I have looked at the schematics and block diagram to find that the 22-30 MHz segment share lots of common circuits. But the rig works fine in some parts of this range.

Clif suggested looking at VCO-1 signal. There is a slight signal decrease at higher frequencies, but it seems to me that it does not justify the three S-unit difference... Anyway, can somebody comment about this?

Another thing which is puzzling me is the ALC indication on transmit... It works fine in 160, 80 and 40 meters... But there is no indication at 20, 15 and 10 meters. But 20 and 15 meters reception is fine... I have not yet gone through the TX alignment but I wonder if you have any clue about this.

Thanks for all your help!

Best regards,

JOSE

Jay,
Also try www.qrz.com, go to their radio mod page and look for the ts-440 mods.
I know they have one in there that deals with AM recovered audio.
The radio mod page has LOTS of listings.

Good Luck

4014. FA; KENWOOD YG455C-1 FILTER--LAST 2 DAYS

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-05 00:00:00 UTC
From: rong@computer.net
Message-ID: <389c5385.5684322@news.computer.net>
Source record: 86314

I have a Kenwood YG455C-1 500Hz CW filter up for auction on
Ebay. It fits the TS-450, 570, 690, 850, 870, 930, 940, & 950 series
of radios, & possibly others. It works perfectly. You can find it at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=247714851

The auction closes on Sunday at about 9PM EST. The filter currently
sells discounted for $149. At the present time, the auction is only at
$75. Why buy a new one for $149, when you can have the same thing for
MUCH LESS. GOOD LUCK BIDDING !!!

Hello!

Well, one of the troubles commented in the previous message (the VCO-4 adjustment) was corrected in a Service Bulletin (SB-986). Sorry, I didn't notice it!

But, while looking at my troubles with the 10 meter band, reading another Service Bulletin (SB-974), I have found that one of the band pass filters (BPF) switch diode was faulty. And the BPF was... the one for 22-30MHz!!!. So I thought my trouble was gone... until I opened the can of worms!. Two BPFs, the one for 22-30MHz and the one for 14.5-22MHz had been severely modified (components soldered just in one leg, coils swapped for capacitors, ...)!!!. The good thing is that it _seems_ that all the original components are there, but in different places. I think somebody just didn't notice the faulty diode and went by the hard way :-(

It seems also that the schematic I have is NOT exactly what the PCB circuit shows. So I have a modified circuit AND an schematic which seems different to the 'original' PCB circuit layout. Does somebody know if there is any schematic revision?. My manual is dated December 1988. I would be glad to get an scanned copy of the BPFs section of a different (newer or older) manual, to compare with mine.

Thanks again for all your help!

Best regards,

JOSE

For Sale: Gorden West General Class Upgrade package.

Upgrade now before the new rules come into affect April 15, 2000.
Prints out sample written exams. Complete with 144 pg. Gorden
West study manual and FCC part 97 Amateur Radio Rule Book.
Software included, which give sample exams, and also teaches
Morse Code. Includes Novice and Technician exam questions.
Study at your computer. Software has NOVICE, TECHNICIAN PLUS,
and GENERAL CLASS, plus Morse Code. $20.00. I paid $34.95.
Ph. 545-9368. Or email me.

Also have MFJ Pocket Morse Code Tutor, model MFJ-418.
Teaches the code from scratch. Helps build your speed.
Has beginner sets, advanced sets, and custom sets for
characters and words. Set it for 7-8 words a minute, and you
will ace the code exam at 5wpm. If you ever wanted to copy
high speed CW, this will put you on your way. The MFJ-418
sells for $80.00. Will sell for $52.00. Tel. (704) 545-9368

Microsoft Office 2000 Consumer Preview Program. Box says
it's for Window's NT Workstation. Consists of 7 CD Roms.
Got it in a trade, make me an offer.

>just lites at certain times, or its burned out, or what.

Most probably burned out.

>What size is the
>bulb?

> IIRC, it's a #47 or #44. Bayonet base, 6 to 8 volts.

> Can I get it at the local RS?

Should be able to. Open it up and take out the old one to be sure they give you
the right thing.

Or swap with the one behind the meter, because you need the dial light more.

>Thanx in advance

Do you have the manual? If not, there are manual websites where you can
download them FREE. One is K4XL's BAMA site.

The folks on rec.radio.amateur.boatanchors

can help, too.

Well, today I just took 4B, missed one which I wouldn't have had I thought the question through a bit more.

I got the Advanced in 1987 and never had the desire to spend the time to get my code speed back up to 20+ wpm where it was when I was active on CW as a novice in 1955-56. If I recall correctly when I took the Advanced I thought from the preparation material that the Extra Class test was an easier one than the Advanced!

Gee, I have an MSEE, have taught college level vocational electronics for nearly 30 years and didn't even study for the exam.

I guess I should feel bad that I'm so inferior to those of you who decided to take the time to improve your CW speed. I'm sure I'd be much better for taking all the time that building my CW speed would have taken. Sorry - I neither find CW easy nor enjoy it. I know for a fact that many of you don't know a grid from a soldering iron but I guess the only thing that counts is that you're still stuck in the past yelling and screaming!

Source record: 86330

Buy the Icom 2100H, the 2600 is junk. I've sent mine back 3 times still have corrected the problem. Best they say there is nothing wrong with it. As the price of a dual-band for just a little more for about 100% more. A friend just purchased a 2100H at RT systems Hamfest price for $172.

Good luck on your decision. Don't forget ADI Very good 2 meter rigs, but don't have all the bells and whistles the others have.

I agree that the Advanced test is/was tougher than the Extra. I was one of the lucky ones who passed it even though I had only studied up to the General exam. The reason for this, I rationalized, was that I was working in the commercial 2 way field and had much of the practical knowledge that was required on the test.

I just passed a practice Extra exam on the Web and will be taking "the real thing, baby" next Saturday. Wish me luck.

I can relate to the soldering skill issue. As a graduate EE and an
Extra,
one of the high points of my career was when I changed a soldered in IC
on a factory built PC board during a weekend troubleshooting session.
On Monday the professional soldering inspector refused to believe that I
had changed the part until I showed her the removed part. But I did not
learn that skill in school.

Aloha,
John KH7T

I bought the 1208 as a kit about 3 years ago. It was a good kit to build. Lots of soldering, but good documentation. It worked the first time. I used a dipole the first summer. Had trouble being heard with only 8 watts. Built a 3 element beam and have been much happier. Now I can work most stations that I can hear. Yes, it is worth the price. An excellent way to get on 6 meters for low cost.

4052. UPDATE MY KENWOOD TS950SDX ???

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-05 00:00:00 UTC
From: rong@computer.net
Message-ID: <389b8137.1277533@news.computer.net>
Source record: 86440

I have a Kenwood TS950SDX that I bought used from the second
owner. The serial # is 41000017. I think that translates to October
1992, 17th unit produced that month. The rig is in mint condition, and
works extremely well. It has all filters installed, the voice module,
and the digital recording unit. I know from looking on the Kenwood web
site, that later units have more features that can be accessed via
programming menus. Is it worth it for me to send the unit out to have
it updated to the latest specs ??? I'm sure it can use an alignment
also after 8 years. The problem is that it works flawlessly now--I
don't want any problems. All of you late production 950 people, or
people that have had their radios updated, give me your thoughts.

In the US it is mostly low power point to point. Outside the US ?? I think
these radios were set up for some fishermen way outside the coastal boarders.
I think there is a HAM band in the UK in the 70mhz range.

4066. FS: Icom IC-738 HF Transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-06 00:00:00 UTC
From: Ben Wallace <bwallace@sd.cts.com>
Message-ID: <87kpls$1olk$1@thoth.cts.com>
Source record: 86255

Hello All,

I have an Icom IC-738 HF Radio for sale. The IC-738 has the built-in tuner
that will handle 10-160 meters. Includes hand mic, DC power cable, original
manual.
Works great and in excellent cosmetic condx. Needs a lamp for the S-meter.

IC-738 SPECIFICATIONS
GENERAL
Frequency Coverage:
Receive: 500 kHz - 29.995
Transmit:
1.800 - 1.99999 MHz
3.500 - 4.000 MHz
7.000 - 7.300 MHz
10.100 - 10.150 MHz
14.000 - 14.350 MHz
18.068 - 18.168 MHz
21.000 - 21.450 MHz
24.890 - 24.990 MHz
28.000 - 29.700 MHz
Mode: SSB, CW, AM, FM
Number of memory channels: 101 (89 regular, 10 split, 2 scan edges)
Antenna impedance: 50 ohms nominal
Usable Temperature Range: -10�C to +60�C; +14�F to +140�F
Frequency stability: Less than �200 Hz from 1 min. to 60 min. after power
ON. After that, the rate of stablity change is less than �30 Hz/hr at +25�C;
+77�F. Temperature fluctations (0�C to +50�C; +32�F to +122�F) less than
�350 Hz.
Power Supply Requirement: 13.8 V DC �15% (20 A)
Current drain (at 13.8 V DC)
Transmit: max. power 20 A
Receive: squelched = 1.6 A; max. audio output = 2.1 V
Dimensions: 330(W) x 111(H) x 285(D) mm, 13.0(W) x 4.4(H) x 11.2(D) in
(projections not included)
Weight: 8.6 kg; 19.0 lb.

4067. FS: JRC JST-245 HF+6 M Transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-06 00:00:00 UTC
From: Ben Wallace <bwallace@sd.cts.com>
Message-ID: <87kqiu$1ppb$1@thoth.cts.com>
Source record: 86256

Hello All,

I have a very nice JST-245 for sale.
This transceiver is in excellent electrical condx and very good cosmetic
condx.
Complete 160 to 10 meter coverage plus 6 meters in all modes
(AM/FM/SSB/CW/RTTY).
Has a built-in automatic antenna tuner. The tuner settings are
automatically stored in memory for fast QSY.
It has 3 antenna connections, selectable from the front panel.
General coverage receiver tunes from 100 kHz to 30 MHz plus 48 to 54 MHz.
Variable Bandwidth Control for IF.
Variable bandwidth permits the standard 2.4 kHz filter to be narrowed
continuously to 800 Hz.
Includes Passband Shift (PBS), dual noise blanker, three step attenuation,
I.F. notch, selectable AGC and all-mode squelch.
Notch tracking is automatic. Once tuned, the I.F. notch filter will track
the offending heterodyne (± 10 kHz) if the VFO frequency is changed.
Full break-in, variable CW pitch, and built-in electronic keyer.
Two separate VFOs are featured for split frequency operation.
Memory registers store most recent VFO frequency, mode, bandwidth and other
important parameters for each band.
Each of the 200 memories stores frequency, mode, AGC and bandwidth.
A built-in RS-232C interface facilitates computer control.
Built-in power supply.
Beautiful colored LCD display
Includes NVT-56 and NVT-57 microphones
Original manual, AC power cord

Works great. Front panel near perfect but cabinet has a few scratchs. See
pictures below:

Well, the ft-1000mp is not quad convertion radio. You need
to change all the stock filters & replace with inrad's to make
that rig really useful (I'm a cw op).
I looked at both the 775 & 1000mp, and bought a 775.
It's "not current technology" sure works well. Sometimes
"current technology" means failure-prone rigs... look at
FT-100!
I like my 775 very much.

Source record: 86263

That is funny because I had the same opportunity for a comparison and the 775DSP had a much quieter receiver than the 756 for some reason. I read the ARRL product review for both the 756 and the 775DSP. The results of their testing does not show any increase in sensitivity of the 756 over the 775DSP. The 775DSP and 756 are much more sensitive on receive than the 1000MP.

The 775DSP also allows you to install 2 optional crystal filters for each IF stage for a total of 4 optional crystal filters. The 775DSP comes stock with a 500 Hz crystal filter in each IF. I think the 756 only allows for one optional filter in each IF.

By the way, the new 756PRO does not allow for any optional crystal filters for the IF stages previous to the DSP. I am waiting to see how that will hurt its performance during contests where selectivity is king?

From: Rick Miller <rdmiller@bit-net.com>
Message-ID: <87l7c7abv1@news2.bit-net.com>
Source record: 86264

I would echo Tom's comments as well. I think the 2600 is a great radio. There are features of the radio which I do not use, so I can't say I've tested it completely. But I've found it to be very reliable and easy to use.

I did look at the icom radio. However, while playing with the dispay model at HRO, I accidently touched the LCD readout. The readout stayed dark and unreadable for almost 5 minutes. That was a major reason I skipped the icom. I know when I'm in the car, fumbling for the right buttons, trying to pay attention to the road, I would have accidently hit the display. I didn't want to have to deal with that.

The Yaesu has a hard plastic lens over the display.

Any, everyone has their favorite brands. I think their all pretty good. I'm sure you'll do okay no matter which way you go.

I have SS-30 (Astron)

I am using with my Yaesu FT-757GX and FT-2600

I was afraid of noise generated by Switching power supply

but , I did not get any noise from power supply.

Cooling fan kick in after about 3 minutes of TX on 100 Watts, and it is some what noisy.

yes, that is excellent choice

I have been ham for over 16 yrs

and I have exact same setup as yours, FT-2600 and MFJ 5/8 wave antenna, except my Magnetic mount have been falling off, so I replace with permanent L angle bracket to my trunk.

Now there is a classic -- my first hf rig was a swan 500c.
This is from Friday's (2/4) QRRL newsletter:

SWAN, ATLAS RADIO FOUNDER HERBERT G. JOHNSON, W6QKI, SK

Herb Johnson, W6QKI--who founded Amateur Radio equipment manufacturer Swan Electronics in the 1960s--died February 1. Johnson, who lived in Cardiff, California, was 79 and had been in ill health for several years. According to Gary Smith, VE4YH (proprietor of the VE4YH Virtual Swan Museum, http://www.pcs.mb.ca/~standard/), Swan Electronics, then Swan Engineering, began during the winter of 1960-1961 as a one-man operation with Johnson, then W7GRA, building the first 10 Swan SSB rigs in a garage in Benson, Arizona.

Swan moved to California in 1962 and became a subsidiary of Cubic Corporation in 1967. Amateur equipment production continued until around 1979. In its heyday, Swan cranked out some 400 transceivers a month from its Oceanside, California, plant. Swan also manufactured station accessories.

I have seen some truly BAD soldering that was
certainly not representative of a "developed"
soldering skill BUT the eperiment that the
soldering was used to set up worked fine.

There is a BIG difference between soldering
in production vs a bench experiment.

Cheers,
Bill K2UNK

I'm seeking a kind of elmer. I already have the tech ticket and I'm making good progress learning the code. I just bought a th-g71a and honestly don't have a clue. I'm sure I'll figure it out eventually from the somewhat clear as mud manual, but I'd rather do it without getting yelled at a lot. Would anyone who knows this radio be willing to give me a few lessons? Anne Arundel co, Glen Burnie, Pasadena area preferably. Prefer in person but on the air would be ok. (I think I can figure out how to make simplex contact) E-mail suggestions also welcome. I've never spoken on a ham radio, I have the battery charging now and will be eager to transmit Sunday morning feb 6. I need to put this thing through all it's paces within 10 days to avoid a return hassle if something is wrong.

I suspect that the radio(the VCO mostly) can be retuned to extend the high
end, but it may be at the expense of the bottom of the band.
As for the radio working at 800 but not above 477, the 800 may well use a
different VCO.

>less hi-fi.

Right, but if you're driving a stereo's line input with it you aren't going to be
cranking it up to rated power are you? When operated at more sensible
drive levels, these audio output chips have reasonable distortion figures.

>Best bet is to find a receiver with line output or delve into one and
>pick off the signal prior to the driver stage to the volume control.
>Feed signal to the pre-amp of your system.

There are a couple of reasons to take this approach. First you get a
fixed level suitable to your stereo's line input (signals from the detector
are typically too hot to go into a stereo's preamp inputs), so you don't
have to make sure you have the radio's AF output pot cranked down to
prevent overdrive.

Second, you bypass any "communications audio" shaping that the radio's
audio stages may have. Often the radio's audio section will be designed
with high and low cut circuitry to emphasize the frequencies where
speech concentrates the most energy. This gives more "punch" to the
signal, but is actually a form of (intended) distortion of the signal.

Hi-Fi is by definition a *flat* response with no coloration of the audio by
the transducing (microphone), transmitting, receiving, amplifying, and
transducing (speaker) equipment. The sound you hear should be identical
to the sound you'd hear if you were standing next to the microphone picking
up the original sound. This is the ideal, seldom approached even in high end
stereo equipment. Even the best speakers have 2% to 5% distortion, so
worrying overmuch about smaller levels of distortion elsewhere in the
system is nonproductive.

LIfting the grounds is a bit dangerous. These supplies are not line
isolated, and you could get a nasty shock if certain component failures
occur. If you do this, double insulate the supplies by putting them inside
a grounded metal enclosure.

>Simply hook up the 5-volt supply leads in series, and pop a couple of
>big-ass diodes in line to regulate down to 13.6 volts or so.

This will often work, but you can sometimes get odd interactions between
the switchers. This can lead to large spikes. Also, if one supply fails, it
may fail shorted internally with the result that you may get 300 plus volts
at the output. Not good for your equipment. This sort of failure is somewhat
rare, but it can happen.

>That will leave the 12-volt outputs still available, and you can parallel
>them for another 20-30 amps or so. If you can find supplies with voltage
>adjustments, so much the better...turn the 5 volts down to 4.5, and crank
>the 12's up to 13.8.

The 12 VDC outputs of PC supplies are generally rated at around 2 amps,
so you aren't going to get 20-30 amps here, and one of the supplies will
hog most of the current anyway unless you take steps to equalize the
currents from them. Best to just use the 12 VDC outputs separately to
power station accessories.

>On some units, you may need to tie +5 volts to the orange lead (power good)
>for the units to run. The diodes in the output will provide enough load to
>keep the supply in regulation.

No they won't. Since they're in series with the output instead of shunt, they
will provide no load unless the driven equipment is drawing current. So the
supply will be unloaded when your equipment is off, and the voltage may
be wildly different than the regulated voltage. You need a shunt resistor
to load the 5 VDC output to maintain regulation under very light or no load
conditions. A value of 10 to 20 ohms is sufficient. These should be matched
resistors if you're going to series the supplies.

Best way of all, to find out more about ICOM equipment, is to get on the ICOM users net. Sundays @ 1700Z, on 14.317mhz.
We have had several 756Pro's check in from Canada recently.
See you there. 73 de Matt KK5DR (temp Net Con, ICOM users net)

This comparison would a bit of "Apples & Oranges" type comparison. The
775 was designed several years back, and didn't have the advantage of
current technology. And had different design parameters and constraints.

I have six FT-2600M's and have had no problems with any of them (I run an Army MARS packet
gateway). We bought about 20 of them for the National Guard - had only 1 dead out of the box.

They are a really nice radio for 1200 bps packet, but we have been having problems with their
9600bps performance. I just got a couple of the MFJ 5watt data radios to try for that network.
The alpha display and computer programming make them great for untrained operators like
MPs and Supply soldiers.

4114. FA: Hallicrafters SX-62 Receiver

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-06 00:00:00 UTC
From: jbr101@my-deja.com
Message-ID: <87k7nuunl1@nnrp1.deja.com>
Source record: 86380
Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.equipment,rec.radio.amateur.boatanchor,rec.radio.swap

I have a Hallicrafters SX-62 receiver for auction on eBay.

The URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=253218957

and the blurb is

This is a very restorable example of the venerable Hallicrafters SX-62 receiver, which offers continuious coverage 540 kHz thru 109 mHz. Controls are pointer reset, band selector, receive/standby switch, crystal calibrator on/off, noise limiter, tuning, volume, reception (mode) control including phono input, selectivity (3 crystal positions and 3 LC filter positions), tone control, and sensitivity (RF gain) control. This is a true high-fidelity superheterodyne receiver, with a pair of 6V6's providing an honest 10 watts of superb audio. The giant sliderule dial features a back-lit display that illuminates the band selected, and the flywheel tuning mechanism provides silky-smooth station tuning. A very impressive looking receiver, which receives AM/CW/(SSB with careful tuning !) up to 32 mHz, with FM also 27 - 109 mHz. This particular all orignal example is in reasonable cosmetic shape, although the cabinet could use a repaint and a previous owner engraved his/her SS number inconspicously in the corner of the bezel, which has some rub spots. The bandswitch knob is starting to crumble and should be replaced; otherwise the radio presents well. I started this restoration by verifying that the power transformer is good, and that a couple of tubes need replacing, but I didn't get much further than that in a year so I figured it should go to someone else for completion. As with all old electronics, this is sold as-is, although I will guarantee that the power transformer is good. This should restore well and be a worthy addition to someone's collection; once you hear the wonderful audio and experience the ease of using this wonderful old radio, it could well become your favorite. Includes a copy of the manual and Sam's Photofact Folder.

Closes 2/13/00.

Thank-you.

WHAT?

Both radios are current models on sale today at your favorite vendor. I certainly can compare them! It is NOT apples to oranges, it is radio to radio!

Personally, I prefer the FT-1000mp.

4124. ICOM R70 AC/DC operation

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-06 00:00:00 UTC
From: peter <pschuhNOSPAM@bigfoot.com>
Message-ID: <s9rba7u4dvd95@corp.supernews.com>
Source record: 86390

I inherited an ICOM R70 communications receiver with the IC-CK70 DC Power Cable Kit installed. This IC-CK70 kit allows the R70 to run with 12vDC

According to the original IC-CK70 instructions that I have, the radio will also be able to run with 120vAC "if the jumper plug is inserted into the DC power connector"

I would like to run the receiver on AC, but I don't have the jumper plug. I can easily make one if I had the pinouts.

The DC power cord looks like this:

```
pin
|-----|
1 | o | gnd
2 | o |
3 | o |
4 | o | +12vDC
\ /
\ /
```

I looked inside the R70, and pins 2 and 3 have connections going to the power supply circuit board (as well as pins 1 and 4). I'm guessing that pins 2 or 3 have to be connected to pin 4 to allow AC operation.

Would you have any information on the jumper plug pinouts for the R70 with the DC power kit to operate on AC? I don't have a copy of the schematic, and the IC-CK70 information only says "For AC Operation: The set can be used the same as before, however don't forget to insert the jumper plug into the DC power connection."

Also, would you have a copy of the schematic of the R70? I have the owner's manual, but no schematic.

Thanks!

Peter

ICOM IC-255A 2 meter rig for sale or trade.

Has 5 memories with 25 watts high and 1 watt low range.

Includes original mic. original manual.

No mobile mount.

This unit is perfect for 2M packet. It has all packet interface signal connection available in the rear of the unit. More importantly, it has a very hot and selective receiver.

In very good working order and ready to use.

Would trade for a reliable, working HT.

$85 plus shipping from Tampa Fl to your QTH.

Cheers,

Al Link, KL7QH

4132. WTT: 4x SCSI CDRom Writer for ?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-07 00:00:00 UTC
From: cobrano-spam@budweiser.com
Message-ID: <389ebd39.4902086@news.thegrid.net>
Source record: 86149
Cross-posted to: rec.radio.swap,rec.radio.cb,rec.radio.amateur.equipment,alt.ham-radio.vhf-uhf,alt.ham-radio.marketplace

I have for trade, a 4x SCSI CDRom Writer 4x write and wish to trade
for a:
Uniden/President HR-2510
Galaxy All-Mode Export radio
or a
Kenwood TM-441 or TM-541.
Radio must work excellent and look ok. Cosmetics are important but
minor scratches or normal wear is ok. I have 2 of these drives and
only need one of them, thats why I am getting rid of the other one.
The drive was tested by reading/writing and works great. I dont have a
manual or cable for it but it was detected by Windows 95 without
special drivers. I may be able to include an Acculogic ISApport SCSI
card with it, but do not know if the card works or not. The card has a
floppy drive connector on it also. I will ship drive immediately upon
receiving radio only.

Do you think you might have what Im looking for?
All inquiries will be answered.
E-Mail me at: cobrano-spam@budweiser.com
remove "no-spam" from the e-mail address to get the correct address.

Ham radio and internet are entirely different functions. Exactly how
are you going to reach 1000 hams at the same time world-wide on ham
radio? If you were making that exact statement over ham radio right
now, odds are infinitesimal that I would hear you.

4134. Re: ANY INFO ON FEBRUARY KENWOOD COUPONS?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-07 00:00:00 UTC
From: dlr18sh@aol.com
Message-ID: <20000207084234.26295.00001891@ng-cn1.aol.com>
Source record: 86151

Kenwood is out of the coupon promotion game according the higher ups I spoke to
. They would rather just give you a decent price on the equipment rather than
over inflate the price one month and then give you a $ 200 coupon the next. The
guy I spoke to said the Hams simply wait till the coupons are available then
buy, rather than
just buy in a consistent manner. I think I took it the wrong way at first but
he is correct. If you got a decent price without the
coupons you would be better off. The $10 you see must be from the Dealer and if
you shop around you will see it is a gimmick. I bet you can go to Texas Towers
and get a better price today on anything HRO has for sale with the $ 10
coupons.Look for the bottom price including shipping costs and also check the
return policy. It appears most places just sell and don't back it up so Use a
American Express or VISA GOLD like me and if you get a lemon you can dispute
it. It takes a while(2 months) but I have gotton my $ on several purchases
where the Dealer said all sales are final or 3 days to return and the item but
it takes a week to get here so he sould simply send a bad apple etc. I got all
my $ and the Dealer ened up sending UPS to pick up the package at his expense.
Don't let the Dealers pushyou around.

4141. Re: Kenwood TS690 vs Icom IC736

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-07 00:00:00 UTC
From: Chris Hansohn <k4rch@yahoo.com>
Message-ID: <87ms3s$893$1@bob.news.rcn.net>
Source record: 86158

Thanks for the reply. After reading ARRL reviews and comparing the two, I decided on the Kenwood 690. The Icom, like you said, has its own power supply built in which wouldn't be useful mobile. Also, the only optional filters it takes are the narrow cw ones. With the Kenwood, its 13.8v and it has more filter options (and after reading the ARRL review a definite must.) So now my quest is to find a clean 690 and load it with Inrad filters. That should work just fine.

Chris

4155. kenwood handheld question

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-07 00:00:00 UTC
From: glathrem <glathrem@hotmail.com>
Message-ID: <87ngkf$4bq$1@nntp9.atl.mindspring.net>
Source record: 86172

Excuse me if this is a stupid question, but I really don't understand. I'm using a kenwood TH-G71A and I want to run it off a power supply when I'm at home. The manual shows a picture of connecting the dc cable to the radio with the battery on the radio. The manual also warns about overcharging the battery, which is also charged through the radio and the same dc in plug. The dealer who sold it to me told me there is no circuitry in the radio to cut off charging when the battery is fully charged. You just leave it charging for 15 hours then disconnect the dc cable. So my question is: Won't the battery be overcharged when operating with an external power supply? Should (or can) the battery be removed when using a power supply? Can you recommend an inexpensive power supply. It draws about 2.1A max on transmit. I don't want to spend 2 hundred dollars on a PS. Would the astron RS-4A be ok? Or should I step it up a bit. Do I really need to get a filtered PS like the astron SS-10?
While you're here I also have an antenna question. I'd like to use a mobile (mag mount car) antenna which I would put up in the attic while I'm at home. Any recommendations on a mobile antenna to connect to this handheld? Am I going to have any problems with this idea?

Here is a phone number for Radio Recyclers:

414-760-3000--ask for Neil

They will do mail orders and have a large QST, CQ, HR, etc. collection. I completed my own complete run of HR and CQ + QST back to 1945 through Neil.

Regards,
Brian

4161. Homebrew 3 KW plus Antenna Tuner

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-07 00:00:00 UTC
From: wz1u@aol.com

Source record: 86178

I have for sale a Homebrew 3KW plus roller inductor tuner.....The dimensions are 22W x 15D x 11H and weighs 45lbs in a Bud cabinet.....Has a Jennings VC-50 rated 32,000 volts.....This tuner is well built and if you go to
http://people.ne.mediaone.net/ssouza/WZ1U.htm
you will get some pictures of it, if you have any questions please e-mail me for more info..... I will take $200 plus shipping .....WZ1U Steve / Lakeville, Ma.

4162. Icom 706 versus Yaesu 100

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-07 00:00:00 UTC
From: Dan Grassetti <dangrass@concentric.net>
Message-ID: <389EE196.2EC987DA@concentric.net>
Source record: 86179

So, what's the concensus on these two? What are the pros and cons of each? Can the Icom be modified for the same kind of wide-band receive as the Yaesu?

Any help would be appreciated.

thx...

4163. FS: FT50R with all mods

I'm looking for a decent, working IC-2400A, preferably with at least one tone squelch module. Physically, it doesn't have to be in pristine condition but I don't want a junker. It must be in good working condition.

Email me with condition and price. A digital photo might be useful.

Thanks... Ed, W5EJ

Geoff,

I really wouldn't worry about it. Just as long as you keep your
transmissions within the frequencies that you are licensed to use you
shouldn't have a problem. Just my opinion, though...

73,
Chris

Source record: 86190

There doesn't seem to be any 'unsafe' or 'safe' FT-100. Some hams have experienced problems (rather severe in cases) and have tried to make it seem that the entire line is flawed. Far from the case, there are hundreds of flawless operating units and the serial number being sold today vary all over the place. Mine was purchased new about a month ago, has what some consider an 'old' number (9Dxxxxx) and yet it's an absolute jewel of a radio, with all current updates.

Listen to the complaints, but realize that ALL models of ALL manufacturers have occasional problems. The choice is then, 'which manufacturer will do you right in the end?"

Living near mecca (Icom in Bellevue, WA), I had the chance to compare the 756 with the 775 side by side. Believe it or not, the 756 has a slightly more sensitive receiver. When I pointed this out to the tech who was required to "chaperone" me in their ham station, he agreed with me. Also, at that time they had two 775s in the shack. One of them had a broken main tuning knob! Even though I came in prepared to order a 775, you can be sure I left knowing that I wouldn't. Save your $ and get the 756. GL. K7JY. Seattle.

Hi to all,
Yesterday I passed elements 2 and 3A .Now I am working on the code and general exam.Hopfully I will be ready when the next test session comes up in my area.I don't intend to wait for the restructuring to take effect.
On to my question.Yesterday afternoon I purchased a new FT-2600 and a MFJ 5/8 wave magnet mount antenna.Is this a good starter set up for 2 meters?I would appreciate any comments on the radio ,antenna and getting started in ham radio.
Thanks to all that read.

Source record: 86280

The Kenwood is designed to be a mobile great field day rig, the Icom is a base station only radio tht will only run on 110. Both are great 6 meter rigs though the kenwood is only 50 watts, but you don't need more for six meters. Unless you only plan on using it for FM voice.

Source record: 86282

I have heard of at least 2 local hams that had to return the FT-100 for repairs etc and finally gave up and bought the 706. They seemed to think that some early FT-100s were clunkers and that Yaesu was repairing returns and restocking dealers shelves with "repaired" units. One local ham reports uncrating a new unit and finding it already programmed with certain freqs etc. Another thing to consider is the remote mounting of the head unit, once you remote the Icom 706 head, you have on the head both microphone and headphone jacks at the ready, not so with the FT-100, in fact how do you connect a headphone to the FT-100?

4187. Re: EBAY BUYERS... Go mow the lawn or something!!

Source record: 86283

What would be the advantage of posting items on Ebay and having friends make final high bids on the gear? The seller would be charged the price of the auction. I would agree that there probably is "shil" bidding going on over Ebay, but there still has to be someone that "pays the price" for the seller to actually get paid. I have sold many items on Ebay and do find it amazing what some folks are willing to pay for items, but it is a fun way to sell and if you are honest you get good feedback and people do trust you.

Source record: 86285

I heard the same thing. I was also considering the FT-100 and started to keep tabs on the serial #s so when I felt it was safe to purchase I would know what serial # to see in the store and to avoid old stock. The problem was I kept hearing about the radios failing so never got to buy one (even the Dealer tried to talk me out of it and buy the 706 !). Then a local guy bought a FT-100 and the Serial # was close to ones failing say 6 months ago !
I kept close tabs from guys reporting the serial # on USENET and other sources.

He did say the radio appeared new (no scratches etc.) His radio has not failied yet either although he uses it to listen 99% of the time. I think or Guess that Yaesu took all the radios from Dealers stock and may have Updated them so they would stop Dieing in Large #s so that may explain the Old serial #s. The funny thing is the small Dealers have the latest serial # and HRO has the very oldest . I thought it was illegal to sell a used radio as new but I wouldn't put it past any manufacturer to due this if they got 1000 returned radios that failied. What do they do with these radios ?

Try Radio Recyclers in Milwaukee, next door to the AES Headquarters building.
They have an awesome collection of old magazines at very good prices.

I have a 4x write CDRom Writer SCSI type and want to trade for a Good
working Uniden/President HR-2510 or Galaxy Pluto/88HL. I allready have
one drive and dont need the other. These were bought as a package deal
and both have been tested and work great.
Radio must be in good working condition and good cosmetics. Little
scratches here and there dont matter. No Mic? No Problem!
I will ship drive upon receiving radio.

Howdy , I have for sale an Icom T8A HP handheld in good condition with
the extended Tx mod done . It comes with 2 NiMah batteries .
One battery is only a month old a new ICOM BP-199 , the other is a Maha
BP-200 . I also have the ICOM CP-12L 12v filtered adapter .
Comes with wall charger , Box and Manuals .

I'm asking $185.00 OBO .

Thanks , 73 de kb2tke .

4203. What is a D100?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-08 00:00:00 UTC
From: Geoff Darby <monitech@freeuk.com>
Message-ID: <qCJn4.5080$uc.105283@nnrp4.clara.net>
Source record: 86192

Does anyone have any idea what a D100 is? It is housed in a standard two tone grey/white "Verobox" and the only identifying mark is the "D100" on the bottom right corner of the front panel.

There are various controls on the front - a (band?) switch marked I II U - I guess that's broadcast bands 1 and 2 and UHF - a (tuning?) control called "V" and calibrated in R numbers , which I believe the low VHF broadcast channels are, and then in channel numbers 1-13 which I seem to remember the VHF tv channels were.

Also, there is another control labelled "U" and calibrated 21 to 69, and then on to 80, so this has got to be UHF channel numbers,and a bit beyond. Two more pots are labelled "RF" and "IF" and yet another is called "SPA".

There are a couple of minature toggle switches on the front panel as well. On the rear panel, there are two flying coax leads terminated in Belling Lee coax plugs, and a Belling Lee coax socket. Inside, this socket is wired directly to the antenna connector of a perfectly standard looking tv varicap tuner can. There is a fair bit more circuitry, some of it built directly onto the pots and switches, and some on fibreglass pcb's. There are a number of transistors dotted around on this circuitry, and plenty of open wound coils so a fair bit of it has got to be oscillators I feel.

It looks quite a modern piece of kit and rather better designed than a piece of average home brew, but may well have been home constructed. I work on factory built equipment all the time, and somehow, it hasn't quite got a factory build feel about it, so I think it may well have originally been a kit.

If anyone can throw any light on this, or even knows exactly what it is, I would be delighted to hear from you direct e-mail at monitech@freeuk.com.

Many thanks Geoff G7RTC

4204. FT757 mod reversal ?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-08 00:00:00 UTC
From: Geoff Darby <monitech@freeuk.com>
Message-ID: <pCJn4.5079$uc.105283@nnrp4.clara.net>
Source record: 86193

Recently acquired 757 (ex CBer's I believe) appears to have been modded to give continuous transmit right across its coverage.

Does anyone know how this has been done as there are no obvious signs, and I would like to put it back onto legal UK bands.

Please reply e-mail direct monitech@freeuk.

Thanks. Regards Geoff G7RTC

Source record: 86198

Yep:

I have come into a number of Eproms which may or may not be
for the Syntor Series of Radios.

Here is a list, hopefully if you have bought a Syntor, with the Eproms removed,
these may help.

Motorola Part Number FLN6800A (900)
version 89.21

IC E-Prom number NM27C512QE

Probably have about 500 of them

There is a little black switch (very little) behind the display unit.
Switch it to the other direction and you should be back in amateur only
transmit mode.

Source record: 86201

Hi there,
Unfortunately I can't answer your questions about your Kenwood ht .
However I would think that the radio could be powered by the power supply
without the battery being connected to the rig . I knew a guy that has the
same rig as you , but he has moved and I have lost touch with the guy . All
I know for sure is he loved the radio! Anyway , for the power supply
question , the 4 amp supply should do the job but if you can spring for a
larger supply , I would buy it . If you ever buy more radios or an HF rig
down the line , you'll be glad you bought a more powerful supply . Also ,
you'll definately want a supply with filtering , otherwise your signal will
suffer from noise from the supply circuitry (hum) . Antennas... I have a
friend that has experimented with a 5/8 wave mag mount antenna (Radio Shack)
by mounting it on a large cookie sheet and placing it in his attic. In fact
, its probably still in use . I would recommend building a directional
antenna (quad or yagi) and using it in your attic unless an omni antenna is
really what you need/prefer... I hope that I have helped and if you have any
additional questions , please feel free to email me . Take care ...
73 ,

RATELCO Battery charger / Rectifier. Type FC481505A

Model # 102B-3608-00. 48 Volt @ 150 Amps, Float or Equalize.
These units were manufactured SEPT 1991 and are in the Factory
crates and have Never been used, have 2, sequential Serial numbers.

These units can be used as 48 volt charger for Telephone Central
Office Battery supply's with the ability to Float or Equalize.
They can also be used as a stand alone, well filtered, power
supply rated at 48 volts at 150 amps CONTINOUS DUTY.
Input = 110, 208, 240 Volts. 60 Hz, single phase

A must for the expirimenter working with the new generation
of 48 volt solid state RF devices Rated in excess of a Kilowatt.

Email for pictures in JPG format.

Weight is approximately 550 pounds, Crated for freight shipping.

$1200.xx Each. OBO Prepaid, in my garage.

Gotta get these out of the garage. NEW LOW PRICE

$1000.xx each or both for $1800.xx

Loading and shiping are buyers responsibility.

Bob rhawk@megabits.net.

4214. ft1000mp menu 9.1 (IF gain amp)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-08 00:00:00 UTC
From: Bruce <mackerma@ns.sympatico.ca>
Message-ID: <389F9257.FA3ED00A@ns.sympatico.ca>
Source record: 86203

I have a Yaesu Ft1000mp, and have recently been 'playing' with the menu setting for the IF gain amp, item 9.1

My Yaesu came factory set for '12'. I have now set it at 15. It sounds better at a setting of 20, but no further change seems apparant if the setting is increased further. I have set it at 15, as I am unsure what it would affect elsewhere in the radio, if the adjustment is set to far off the factory alignment

Would like to know what others have found when adjusting this menu item, and also determine if the setpoint of 15 is acceptable. (or 20 for that matter), without degrading the overall performance of the receiver

Thanks for your help

Anyone who can pass the GROL and the radar endorsement as I did will
probably have no problem with any written amateur exam. You took the
NABER exam, yes? I studied and managed to pass sample 4B exams with a
ten-year-old Extra license manual, so I'm probably fine for the VE
session I'm taking in a week. Have *never* failed any ham or
commercial element yet.

I don't have a magnetic-mount to compare for your original situation, but comparing an on-glass to a DRILLED mount (NMO), I found no significant differences after normalizing for the gain factor of the antennas so mounted.

From: Bill Evans <bevans@ebsys.mb.ca>
Message-ID: <9XNn4.13181$e97.521995@typhoon.mbnet.mb.ca>
Source record: 86211

I just inherited a fairly dingy O-12 of unknown condition
and without a manual. One tube is missing from its socket -
that being the only tibe in the unit that is NOT located on
a PC board. It is located beside the main transformer and
the largest can electrolytic capacitor to the rear of the
horizontal portion of the chassis.

Before I spring for a manual, I'd love to find out what tube
is required, insert same and see what happens. Can anyone
tell me what the tube type is that is missing?

Assistance will be much appreciated.

Ensure that you have the ACC plug firmly in place as this plug is required to provide heater voltage for the driver and final amplifier tubes. The plug should have a heavy wire jumper between pins 1 and 2. If need be, pop the back off the plug and make sure that the jumper wire is in place.
(after removing it from the back of the radio which is unplugged at the time <G>).

Dan
I dont know what the story is on the FT100. If you read the 'reviews' on E-Ham (www.eham.net) concerning the FT100, you get the impression that Yeasu has a serious quality control problem with that radio. Currently there is about a $200 price difference between the 706 and the 100. All this aside, the 2 radios seem to be almost equal in specs and features. Godd luck making a decison

I have the edx-2. It is similar to the Icom and Kenwood. My guess is all
are made by sgc.
THEY DO NOT FUNCTION THE SAME AS THE SGC.

The edx-2 tunes on command by the radio, it returns a "key up" signal to the
radio, and drops it when the tuning is complete.

The SGC: senses rf, Measures frequency, checks database, applies last
solution, then checks swr to see if ok, if not ok then does tune routine to
find correct match.

I am quite happy with my edx-2.

Howdy folks. I just picked up one of these nice little dual banders a few weeks ago and these are my impressions.

Size: Like each and every one of you out there I'd seen the ads but I still wasn't prepared for the size of this rig. This radio is literally the size of an 8 track tape, just about an 1/8" thicker. I have a new car and you know space is at a premium for mounting but for me the ideal was to run both power and antenna connections behind the dash and up through the defrosting vents and mout the radio with velcro adhesive. It's remained secure through impact with worst potholes around and it only takes me a second to disconnect it to take it in the house and use it as my base too.

Visibility: The variable contrast/brightness menu item make sure this rig is plenty easy to read in daylight and the cool blue display isn't hard on the eyes at night. The main text display is about 1/2" high so its easy to read while driving.

Ease of use: This radio has some 38 menu item on it. The good news is that once you've programed your favorite repeaters AND monitoring stations in and assigned alpha titles, you can control most of the radio's important functions from the MH-36 microphone. To include power output, changing memory channels or frequencies or scanning.

Performance: I have used this radio quite a bit as a base to get used to it. Output is through a copper J-pole at 35 feet. My radio showed good intermod rejection . also I've never had a rig with a preamp so I was pleasantly surprised with the increased sensitivity. Living on Chicago's south side I have great repeater coverage from Waukeegan north to Joliet south. On a good night Milwaukee north and Ottawa ssw. Indiana as far as crown point, gary, hammond, and I'm still working my way through the repeater directory! Audio reports are crisp and clear on transmit but I'd strongly suggest adding external speakers for use at home or mobile. The built in speaker isn't quite up to the task but for it's size it does a credible job. The radio puts out 2W audio so you can be pretty free selecting speakers to use with it. The radio does build up head pretty fast on high power but the cooling fan comes on high when you start transmitting and is always on low. Not even noticible.

Extra's: This rig performs very well as a scanner for me and to be serious with you all, I decided against buying a new scanner once I found how well it received. As an example I routinely monitor the 118-135 aircraft band/ public service bands in the 70cm rrange and and beyond. With my J-pole performance is excellent and I doubt you'll be disappointed unless you're a hard core scanner. Lastly there is a mod

out to expand the rigs xmit and rcv range. I've read it and it is relatively simple. 5 minutes tops.

In my opinion this radio is a solid 9. But hey! Who want's perfection anyway?

I saw the IC-706 Mk2G for $1179 at Texas Towers and I think the best price for the FT-100 is $1099. For $100 you get a CTCSS decode plus the AM filter is built in. What you don't get is a Mic with a Keypad for touch tones . The FT-100 has a better reciever when it is working and not being repaired at yaesu.

So is there a rec.radio.licensing or rec.radio.policy that
we should post our ads to, now that you all busy deciding
who is going to run your club?

No matter how true your message is, it loses its impact when
it is cross posted indiscriminately to irrelevant news
groups. This news group is rec.radio.swap. Either buy
something, sell something, or even bitch about ebay if you
want. Please keep your licensing problems/views out of here.

i'm afraid i'm one of the originals who thought cutting back the code requirement would virtually eliminate a 'how serious are you about being a ham' filter. in a way, i still do. but keith makes some very good points. our hobby is only as good as we want it to be. even if newcomers only have to learn 5wpm, it doesn't mean they need to stop there. maybe we SHOULD have neighborhood get-togethers. the only problem is that we might have to run for our lives when our TVI-laden neighbors show up!

I also own an FT50 and I'm getting ready to ditch it. The battery usage is pretty awful, and I've tried new NIMH high capacity ones, with similar results. I've just ordered a VX-5, as I hear it's much more battery friendly.

If you get a REAL answer to your question, post it up here for all to see.

First the first charge and the charger is very very very important

When a battery is fully charged and it's left plug to a non "intelligent" charger the current continu to flow in to the battery and this current is transforn in heat. This heat destroy the gell compond in the cell. Intelligent charger put a full load of current into the pack and when the voltage is correct the charger trickle to a low maintenance current about 1/10 of the pack capacity. Example: for an 900mA, 90mA trickle current is a max. Heat produce by overcharging is the real enemmy.

a fully charged pack must show a 11 volt to meter and stay a while around 10 before making a rapid drop.

Car adaptor and wall cube are listed in the worst chaerging device

Time to time 2 or 3 complete charge - discharge cycle may help to take good care.

I hope this will help.

Can't you guys take this whine somewhere else? It doesn't
belong on r.r.a.e. You can't change it, the FCC is following
the lead of most other countries who did the same thing
several years ago. Go ahead with any email flames, I know
and use the code often on eme and aurora where it is
neccessary but it is no longer needed as an entrance filter
(listen to 75m some Fri night, talk about trash!)

> > > Mike.

The 72 MHz band (actually 75.0 MHz) is used worldwide for aviation ILS marker beacons. These transmit using three element Yagi antennas pointed vertically, and put out a "fan" of detectable signals. The receivers have limited sensitivity (on purpose). There are three general types - outer, middle and inner. They transmit Morse code to identify their type, and also use different audio frequencies for the MCW depending upon marker type. There are both audio and visual indications in the cockpit when a plane passes over a marker beacon. The outer marker is where most instrument approaches begin, and the middle marker is pretty close to the airport, and is positioned where an aircraft is supposed to be around 200' from the ground when on a proper instrument approach. The inner marker is acually near the end of the runway.

Model aircraft (in the US) also use the 72 MHz band for digital proportional remote control systems. This can be a problem when flying models near the end of a runway with a functioning marker beacon... Been there, done that... (in Van Nuys, CA).

I borrowed a Kenwood TS-440S from a coworker today in hopes of making my first HF contact this weekend but was wondering how to turn the transmitter power down to five or ten watts. I noticed a pot on the right side of the unit marked RF gain but that controls only the receive gain, or so the manual says. I would appreciate any help.

Like it or not, restructuring is about to arrive.

Like it or not, without a heavy influx of new licenses, ham radio will cease to exist with a very few years. We take up a lot of very valuable room in the spectrum.

Like it or not, there are going to be a lot of new Extras who are only 5 - 13 WPM CW operators.

Instead of whining about these things, let's figure out NOW how to LIVE WITH IT. We can't afford to eat our young, and that's most of what I've seen in here in the last couple of weeks. If you guys are representative of the ham radio community at large, we might as well write off amateur radio.

I'm actually surprised that we are being given this chance to bring in a new influx of people to lobby against the sale of our frequencies to the highest bidder. We need to make the most of this opportunity.

You 20 WPM guys, instead of griping about the new crop of Extras, just remember that not too long ago hams had to BUILD their equipment -- and your predecessors complained when storebought gear got so popular, saying that a bunch of know-nothing appliance operators were going to destroy the whole hobby. THEY WERE WRONG, and SO ARE YOU.

We slow-code guys need to STAY OUT OF THE EXTRA CW SUBBANDS -- this will give the speed-demons less to complain about AND it will give us a goal to shoot for if we are into Beep Mode.

We need to find ways to COOPERATE with each other!

And EVERYONE start thinking of ways to demonstrate ham radio for the kids in schools and at fairs, because without them, we're sunk when wireless Internet providers start taking polls as to who should use all those frequencies. You want those kids to say "No way! I'm using that band!"

Make a big noise to your friends about how easy it is now to get a license. Push no-code, push slow-code, THEN tune to the fast-CW bands to show the EXPERTS, not the REQUIREMENTS.

Field Day ideas:

INDIVIDUALS --

If you are doing Field Day, STAY HOME this year! Print up a bunch of flyers to stick on your neighbors' doors inviting them to drop by your

house and see -- make a block party of it, grill some hot dogs or something, and invite people to help log -- or even operate -- as you hit contacts all over. Enthusiasm is contagious!

This is also a good demonstration proving that YOU are NOT the likely cause of their TVI, because you are on the air all that weekend and they wouldn't know it without you telling them.

Get a couple other hams to help explain things, especially YLs and XYLs who can show it's not an old man's hobby!

If you have any thank-yous from the Red Cross or other agencies for your work, post them prominently.

CLUBS --

Instead of hiding on your usual mountaintop, in your campers and trailers, pick a busy park and do a big presentation under awnings. Have a TV set running to show the lack of TVI "even with all of these radios transmitting all at the same time!" Go to the local media and start talking about this, get some attention and show them what we are using all of those free freqs for. Put up pics of hams doing disaster work.

NO CLUB FD SITE SHOULD BE WITHOUT A DESIGNATED PUBLICITY REP, whose job is to get attention of the media AND of anyone and everyone who ventures near.

Have someone build a QRP rig where everyone can watch -- maybe a new rig every hour or two -- then set up a remote site at the far end of the park, where you encourage visitors to try their hand at "HI" -- then give them a Certificate of Operation, logging name, date, time, freq, traffic sent and your call, and don't forget the time and place of your club meetings, web URL, etc.

Give away handfuls of FREE "Associate Membership" cards to anyone who seems at all interested (ans especially "guest operators." This is where next year's members will come from.

Show off other modes, too. Packet, space, ATV, whatever -- don't just spend all of your time trying to stack up numbers. Your record number of contacts won't mean anything if there isn't a Field Day in 2010, and you "low" showing won't matter if you help make it possible to have a Field Day in 2020.

Get the newest, youngest, and oldest hams to work FD, and make a special sign to post when they are operating to attract attention. Get kids involved as best you can.

Make a poster showing 3 or 5 simple questions from the Tech exam, with the answers (illustrated), to show how easy the exam can be with just a minimum amount of training.

It isn't just Field Day, either! Find ways to promote the new structure of ham radio licensing. Get on your local talk radio (the commercial broadcast kind) and show some enthusiasm. Every group has at least one guy or gal who is a fireball, so put them to work.

If you can get the local emergency services people to do a demo or display, all the better. If you have been doing work for the local parade group or anything like that, suggest that they can help you be there for them by throwing some publicity your way -- the award of a thank-you certificate to the club will get someone's attention.

Above all, YOUR YOUR BRAIN as something other than a counterweight for your butt! Think of ways to attract favorable attention, quit your griping and GET TO WORK.

This may be our last, best hope to keep the hobby going. If we blow this chance, then we DESERVE to lose out.

Thanks. We'll see, soon enough.

I'm just afraid that too many of the people here are all too happy to
fight in a burning house.

Very well said Keith ! I am a "new" ham that passed the technician test before all of this restructuring came to light. I didn't really know what I was getting into, or weather I would be accepted by the 'real hams.' Them ol' codgers accepted me with open arms ! I think that people lose the fact that this is simply a hobby. Much like model airplanes or bowling. But your right... either USE the bands, or LOSE them to some deep-pocketed cellular / mobile radio provider. CAN'T WE ALL JUST GET ALONG.

Sorry, but that is the most ridiculous idea I have read in a long
time. Sunspots are heading for a peak, and CB is becoming virtually
useless. The "S-9 of noise and heterodynes all day" is becoming the
rule across the entire country, including remote areas, because the
signals all propagate.

The ONLY purpose for which CB is useful is car mobile to car mobile,
and that is probably reliable for about a mile with no buildings in
between. And that goes for sideband, too. Ten-four?

"Because Windows was not properly shut down, one or more of your drives
may have errors on them. To avoid seeing this message in the future
... GET LINUX !!!!!!!!

It was never a situation that the C.W. requirement kept out all the dregs. One has to listen to any portion of the band to hear the trash that is on it. Rather, it was a lessening of the overall requirements, especially the written exam, that allowed the bands to become what they are today.

One simply has to look at "every" period of deregulation to literally be able to plot a graph showing the downgrading of amateur radio. C.W. simply kept out of the hobby those too lazy to learn it; the fact that there are some extra class schmucks simply points to the fact that C.W. is that easy to learn!

But when you look at "when" the written test become easier, MUCH easier and then, only adding insult to injury, became multiple choice, again, you could draw an almost straight line downwards from then to where the hobby/service is today.

Most hams don't even know how to read a resistor, let alone have a proper understanding of Ohm's law. And now, even lessening the C.W. requirements to only 5 wpm for all classes of licensees!.....does nothing but rings the death knell to such a beautiful way to communicate.

I hope enough hams come together and write, petition, whatever, the fcc and the arrl in order to reverse both the deregulation of C.W. and the theory needed/required.

Phil

KA2IWR

P.S. Those not wishing to do "any" studying for advancement, simply wait. Probably in a few years you'll have full access to any frequency you want by the further deregulation that is obviously going to happen, sooner or later.

Then maybe you need to get on the back of your current club president to shake things up a bit.

But remember -- the president is only there to coordinate your activities -- YOU can get these things going.

Thanks for the vote of confidence, BTW, but I'm not even in any of the local clubs here in Utah (recent arrival).

And for the guys who wondered why I didn't post my call sign, I generally use my call on ham, my email address on the net, my phone number for telephone, and so on, and just plain didn't think it was all that important. I sit corrected.

Follow-ups set to just .misc and .policy:

In rec.radio.swap (why?), Keith Wood wrote:

>Like it or not, without a heavy influx of new licenses, ham radio will
>cease to exist with a very few years. We take up a lot of very valuable
>room in the spectrum.

It's too bad you began your post with a false premise. From your Technician class point of view, UHF might cease to exist (which seems to contradict the claim that the no-code V/UHF license would save that spectrum), but our M/HF spectrum is in no danger. It was 20 years ago at WARC '79 that we received three new HF bands; we had half the number of licensees then as today, and the pressure on the HF spectrum from commercial services was at its greatest than at any time in history. Regardless of those strikes against us, WARC awarded us three new bands. Today, our current 3.75 megahertz of M/HF spectrum is not of as much value as then (except to us). You have no proof that that ham radio will cease to exist in any time frame.

Previously, you called for "millions of new licensees in the next decade." Let's crunch some numbers and see what *could* happen with just the folks we currently have: Our M/HF spectrum consists of 3.75 MHz, with only say, half of it, 1875 kHz, useful for communications at any one particular time of the day. If suddenly, as if by magic, all licensees were granted M/HF privileges, we could possibly have 670,000 hams attempting to fill that 1.875 MHz. Okay, I'll grant you that folks have to work and sleep, so let's say at any one time, we have one-fourth of all 670 kilohams on the air, with two per QSO. That would mean each QSO would be separated by just 22 Hz. =:o

Okay, being even more conservative, let's pretend that all 3.75 MHz is available all the time, with say, one-tenth of all operators on at any one time: Now each two-person QSO is separated by 112 Hz.

Worried that I didn't take frequency re-use into account? Say we could manage three simultaneous QSOs on a single frequency; each such grouping would be separated by 336 Hz.

"Millions of new operators" are not needed. At times, the bands are jammed to capacity, especially 40m at night (and no, Keith, the sunspot cycle has no effect on 40m propagation).

73, Jeff KH6O
(Remember, Keith, "Mean people suck," so try to respond without any personal insults; facts with proof will suffice.)

4301. TS-440S restoration (III)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-09 00:00:00 UTC
From: "JOSE V. GAVILA (EB5AGV/EC5AAU)" <eb5agv@ctv.es>

Source record: 86070
Cross-posted to: uk.radio.amateur,rec.radio.amateur.equipment,sci.electronics.repair

Hello!

Here I am again with my TS-440S ramblings... hope you don't mind!

Well, I have been working a bit more in my rig. Basically I have removed all the extra components in the receiver band pass filters (located in the RF BOARD). As I commented, these components looked as added by a former owner (the soldering job was definitely not factory and some component legs were not connected). So I have left the three modified filters (22-30, 14.5-22 and 10.5-14.5MHz) as the manual shows. Then, injecting a -73dBm (50uV) signal, I have got good readings (S9 or a bit more) in all frequencies except in the 27-29MHz segment... I am curious about this, as the 22-30MHz filter seems to work fine for other frequencies, both lower (22-27MHz) and higher (29-30MHz). So I think the problem should be in another place... perhaps in the VCO-1?. I checked it and the readings were good in the test frequencies... but these frequencies are all far from the 27-29MHz range. I will need to re-check the VCO for that band, in case it fails to properly oscillate (with enough amplitude) there.

My main concern now is the RF BOARD and its mods. There are 4 or 5 added components (some resistors and a coil) in the solder side but this time they seem factory mods. My RF BOARD has the reference X44-1680-61. In the schematics, they show X44-1680-00. I wonder if anybody has the -61 schematic... it would be really useful for me!

Best regards and thanks a lot for all your invaluable help!

JOSE

Dear friends,

I finally decided to buy mag-mount for my mobile antenna setup.
I would like to hear some recomendations on this subject from you.
First of all I want it to be safe for my car paint. That is the most importa
nt
factor. Also it should resist speeds up to 60-70mph.

I am planning to install 2m antenna. Perhaps you could tell me which
should I choose. I see no big diferencies between Comet and Diamond.

Thanks

Having had to work on my MFJ 9406 I found some mistakes on the factory supplied schematic vs what is silk screened on the board (surface mount version). On the board R60 & R61 labels should be reversed. Also, R64 & R65 labels should be reversed. On the schematic the B+ suply to Q12 appears to be switched along with the rest of the RF section (Q10 & Q11) but Q12 is directly connected to B+ except that the base bias is switched. Just thought I'd mention it to save someone a little head scratching. I don't know if there are any other discrepancies, that's just the section I was working on. 73.

I only scan your post but for the most part I agree with it. I also feel a volunteer band plan for CW operators should be considered. Although it not been anywhere I have seen, for my +20 years in the hobby, a pattern I have notice, the slower operators keep the the high end of the band and the faster operators stay to the low end of the band, probably because the extra CW was the bottom of the band and there were a lot of 20+wpm operators generally hung around there. Even with the upgrade path to General for Tech+, I will stay what is currently at the high end of the novice portion due to my limited CW skills. I have no intention of calling CQ at 3505KHz, I will stick to 3700 to 3725KHz with the rest 0f the 6-10WPM ops.

Look for a leaky band pass filter diode. I had the same problem but
with other frequencies and found two diodes bad.

Hi Marco
I have an excellent condition FT-726R for sale with the 2m and 440
modules in it. I have the original box, mic and manual. I'm the
original owner. Condition is 9.5. $650. 73 Chris VE3NGW/W4 Florida

4308. Mobile Home Foundation Beams - What effect on Antenna?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-09 00:00:00 UTC
From: Curtis Scholl <cscholl@izzy.net>
Message-ID: <ireo4.745$f5.18282@news.itd.umich.edu>
Source record: 86077
Cross-posted to: rec.radio.amateur,rec.radio.amateur.equipment

Hi folks:

I live in a double wide mobile home. There are 4 metal beams around 60 feet long under the floors. I have some questions regarding the effect of the long beams.

1. If I wanted to place a long dipole at the peak of the roof running lengthwise, how would it affect that dipole? If I grounded the 4 foundation beams to earth would it help or hurt?

2. If I placed a wire beam with the "boom" lengthwise and elements perpendicular to the beams, how would that affect the performance?

I suspect that the 4 beams would create an elevated "ground plane" or counterpoise and would do nothing that the earth would not do for dipoles not resonant to the beams. I would think that the beams underneath (being as long as a 40 meter antenna) would resonate and direct the RF in an UPwards pattern. This is if it is not grounded?

OK guys and gals, what are your opinions??

Curtis Scholl

I have a FT-100 with the ATAS-100 screwdriver antenna from Yaesu. This is the ultimate mobile setup! The ATAS-100 is a auto tuning screwdriver antenna. The radio has a tune button on it and what you do is go to a freq and hit the tune button. The antenna automatically screws up or down and tunes itself. When it finds a match, it stops automatically and you are ready to transmit. No more taking your eyes off the road to look at your swr meter while you tune your antenna. If the band is dead, just qsy to a different band and hit the tune button again and the antenna retunes itself without you having to take your eyes off the road to look at your swr meter. This kind of conveniance is a bargain from Yaesu right now. $1099 for the radio and $289 for the antenna. The antenna works all of H.F. from 40 meters through 6 meters. It also works on 2 meters and 440, but I use a seperate dual band antenna for those bands. The DSP and noise filter are excellent. Yaesu had some problems with the first production run of the radios, but all the bugs have been worked out. I never had a problem with mine.If the radio didn't have the all mode 2 meters and 440 radio built in it would still be worth the money. I highly recommend this radio and antenna combo. You can see my install here

Of course it is no good when skip is running, but that is not a
permanent condition, and also you and many other people
seem to think that the only antenna is the stupid rubber ducky
they usually come with--that is a ridiculous mistake. And
No, I would not say 10-4, as three days ago I talked to
a friend that lives about 20 miles away with my walkie talkie
hooked up to a--get this--magnet mount antenna and 12 amp
power supply. You know this is impossible when the skip is
rolling, but it wasn't and I did. I used to have a Midland
13-861 if I remember right and had it hooked to an 8'
Francis on my bicycle and used a gel-cel battery and
could talk quite a distance. The 13-861 was more like
a very compact mobil that had been factory modified to
use as a portable. I have used walkie talkies for many
years as mobils and as base units, the whole key is a
decent radio and a GREAT antenna. ;-)

4317. FRAUD ALERT N0MBW & KL7HNY

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-09 00:00:00 UTC
From: DrPepper@iwvisp.com
Message-ID: <38a19e6c.4566805@news.iwvisp.com>
Source record: 86086

These two guys are both thieves. They ripped me off on
sales on the internet.

Barney Wilborg (kl7hny) literally stole a radio that I sent
him for repair.

Bill Chambers, (n0mbw) didn't send money as promised.
after I sent RDF setup.

BOTH of them refused phone calls, and did not answer e-mail.
These were separate deals, no relation between them other than they
are BOTH THIEVES!

I'm not pissed off, I just don't want them doing it to YOU!

4318. Spectrum analyzer for audio

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-09 00:00:00 UTC
From: Mike Yetsko <joe@user.com>
Message-ID: <riio4.6663$pH6.203079@newsread1.prod.itd.earthlink.net>
Source record: 86087

I just got the latest RadioShack.com flyer, and they have one of
the Vectronics kits listed on sale. It appears to be just a 'serial
adapter' to go to a sound source, and it appears to be packet
and/or other stuff. That really didn't interest me.

But they DID list a spectrum analyzer function.

Now for the price (I don't have the ad in front of me, but I think like
$40) it might be a neat toy for a cheap simple SA. Does anyone
have any experience with this?

Then again, it's just software, and I'm sure it would be much better
on a sound card input, except that the software for SA is BIG BUCKS!!

Mike

4319. FS: AOR AR7030 "Prestine" (price)

Newsgroup: rec.radio.amateur.equipment

Is your home made of metal? Like metal sides, metal top, metal ends....if so,
it seems to me that the metal skin would be the counterpoise for veticals and a
hinderance for dipoles.

Grundig makes some very small receivers, shirt-pocket size, but I don't know about their performance. Sony makes an ICF-SW100 which is about the size of a pack of smokes but performance leaves a little to be desired, also it's more expensive than the 2010!

4336. 2m mobile - comparison

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-10 00:00:00 UTC
From: techgod@gte.net
Message-ID: <38a26af9.20253956@news.gte.net>
Source record: 86028

I am looking at getting a 2m mobile and need reviews and advice
between the following:

1) ADI AR147+ - I've seen the price of this between $180 and 200
2) Alinco DC150TQ - priced from $218 to $250
3) Icom 2100h - priced from $194 to $215
4) Yaesu ft2600m - priced from $210 to 230.

The Yaesu and the Alinco seem to be similar, and the Icom seems to be
the most value for the buck. I haven't seen any of these in person -
HRO Anaheim burned down Jan 23rd.

I need to know if anyone has these and are satisfied with them, or if
they have had problems with them. I hear that the adi has heat
problems, but I don't know.

Any help would be appreciated.

Steve - KF6USJ

4337. Icom mobile can't be used in car!!

Date: 2000-02-10 00:00:00 UTC
From: voerman@my-deja.com
Message-ID: <87ub2g$65d$1@nnrp1.deja.com>
Source record: 86029

I bought an Icom IC-207H dual band "mobile" for the XYL for Christmas. Shortly after installing the rig in her car, we noticed no receive audio (the strongest signals were down in the noise and the squelch would not open even though the S meter was pegged). Transmit was fine. I took the rig into the house and tried it - same symptoms until it warmed up - then everything worked!

It turns out that the cold here in upstate NY was causing the receiver to fail. I took the rig back to the dealer who reproduced the symptoms and sent it to Icom for repair. Icom REFUSED TO FIX THE RIG! It turns out that the fine print says that the specs are only gauanteed to 14 degrees F (the rig fails very near this temp).

During the winter up here - most nights are under 14F so the bottom line is that the rig is USELESS for mobile. I recommend Kenwood or Standard - they make the other two rigs I have in my cars and all work well in cold (below 0) weather.

I am not happy. I can see the receiver losing some sensitivity or the transmitter putting out less power in cold weather, but for the receiver to fail hard at a degree or two below spec. and Icom not be willing to fix it is ridiculous. I will never buy another Icom rig (and I use to be a big Icom fan).

I hope this keeps other Northerners from making the same mistake I did.

>Solid State Kenwood TS- 120, 130, 140, 430, 440 or Yaesu equivalent.

I would add a Kenwood TS-180 in there also. Probably one of the best receivers built. DC radio though and no WARC bands without extra crystal. No SW coverage. But it does have the advantage of being able to work split without buying a seperate VFO.
The Yaesu FT-101ZD was a very good radio also, AC and tube finals. But no split unless you buy the seperate VFO.
There are several new radios on the market now for under $1000, you never did state a price.
If your getting a big tax refund go for the Yaesu FT-1000.
Craig

This seems to be a Yaesu problem on the early
FT-50R's .... My battery will run down after
about 3-4 days with it turned off sitting on my dresser.
The same thing happens with the AA battery pack. (with new batteries)
With the unit off you can measure the resistance with
an ohmmeter across the two prongs on the FT-50. This
resistance is low enough to completely drain the battery.
I have found out that Yaesu knows of this problem and will
fix it for 75.00 bucks. It is the replacement of 2 smt resistors
on the board. You can see some details at:

http://www.ozemail.com.au/~vk3alm/

I'm not familiar with SMT technology and will not attempt
the mod. (my hands and eyes aren't what they used to be)..
I will always consider what Yaesu has done to the ham
community with this obvious poor circuit design before buying
another Yaesu. (Yaesu knows about this and wants to charge you
for their faulty design.)

Suggestion... obtain and read the TS-440S instruction manual!
Seriously, there is a power output control right on the front
panel. Power can be cranked down to virtually microwatts. I
owned a TS-440S several years ago and used it QRP frequently.

4347. Motorola 40W VHF Power Amp dc connection??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-10 00:00:00 UTC
From: alfdude@earthlink.net
Message-ID: <87uuog$l3g$1@nnrp1.deja.com>
Source record: 86039

I recently picked up a Motorola VHF power amplifier (Model N1274A) off of ebay. It came with the manual, but not power cable. The power connector has four pins (2 horizontal and 2 vertical). I have no idea as to which pin is +12vdc and which is ground. The manual does not help and neither does Motorola tech support (unless I buy the cable). Anyone have one of these and can e-mail me the pin out connections for power?
Thanks in advance,
Mike

Sorry to hear about that Lou. I have one in my Explorer and a friend has one too. Both have been flawless hot or cold. Here in SLC, it's darned cold too. I went out the other morning, and my doors were frozen shut. Temp was about 6 degrees. Pried the door open and firedup the truck. The 207 came right on and started rcv'ing a QSO on the local repeater.
You said the S meter was pegged, but signal was down in the noise? Seems like something Icom should repair. Maybe they haven't seen this newsgroup? The 207 is a good radio. I also had an FT5100 that worked perfect in record-breaking cold(for us anyway, about -20F).

Good luck.

I have the 9.6v, the 6v and a 7.2v. The latter being a NiHi battery, the first two Yaesu NiCads.

You didn't say what your Tx:Rx mix is. But, if you take good care and charge your NiCads right, these batteries should perform very well. I take my FT-50 backpacking and the 9.6v lasts almost all day with about 15 min total talk time. Around town on my bike, the 9.6 lasts a couple of hours with some heavy talking. (I'm guessing about 1/3 talk time.)

From: Jeff <n5ujj@bigfoot.com>
Message-ID: <38A2D0FA.719BBB63@bigfoot.com>
Source record: 86044

I'm looking for the Ultimate Mod for the FT-847.

Anyone know how to Cross-band repeat into HF from UHF or VHF with this rig? I'd like to walk around the back yard with my VHF HT on FM and keep in touch with friends on 40 Meter SSB. That would be cool!

The rig already has Cross-Band Full Duplex on VHF & UHF. Someone tell me which wire to clip or which Diode to remove or which resister needs to be jumpered/removed. I gotta get this done.

Make your own CD's with this Matsushita 4X Write SCSI Internal CDRom Drive. I'm looking to trade it for one of the following items only or you may send me comments or if you have something I might be interested in, Leave me an e-mail message. I have 2 of these and don't need the second one. Drive was tested and writes excellent at 4X. It was also detected by Win 95 without any setup software and works great with "Adaptec EZ CD Creator". Below is my list of stuff I'm looking for:

Uniden/President - HR-2510/HR-2600 w/ chipswitch or modded PLL
Kenwood TM-441/TM-541 Mobile
Galaxy Export All-Mode w/ frequency counter
VHF Duplexers for repeater 145.XX mhz range
6 meter FM mobile radio (Kenwood, Yaesu or Icom etc...)

I will ship drive after receiving one of the above

73,
John (kf6foz)

hmmm. Then, calling it a "mobile radio" could be a bit of a stretch.

Relatedly, I have the Icom 2000H. I live in Gunnison, Colo., which
has held the title of "Ice Box of The ConUS" on-and-off for the 21
years I've been here. I've seen -51 degrees F here on 2 occasions.

I've been able to use the IC-2000H down to temps where the mic cord
won't extend and I have to lean way down to get my mouth near it (I
am *not* underway in those circumstances <g>.) The rig has worked
"ok" for me in cold wx. I don't have my manual at hand -- but, IIRC,
the IC-2000H is rated down to -10 C. And -10 C is < Taa-Daa! > -14 F.

My old Azden PCS-4000 used to give me warrbly/watery speech on
transmission when it was cold. I sorta fixed that by epoxy gluing
a small 6V pilot lamp to the speech amp IC. The 6V pilot lamp
was connected to 12V thru a PTC thermistor.

Many people here solve your problem by moving to Arizona... <g>

This is the first I've heard about Yaesu charging for the repair.
Reports of this problem were more common a few years ago in this
newsgroup, and Yaesu always fixed the radio under warranty, or
shipped parts and instructions to the owner free, depending on
the owner's choice of whether to repair it themselves or send it
to Yaesu.

If Yaesu is charging $75, is this for a radio that is out of warranty?
If so, how did the radio get to be a year old without anyone noticing
there was a problem?

>I will always consider what Yaesu has done to the ham
>community with this obvious poor circuit design before buying
>another Yaesu. (Yaesu knows about this and wants to charge you

To be fair, most FT-50s did not have the problem - it only showed up
on some radios. Yaesu fixed those under warranty. I don't understand
how you'd have to pay $75, unless the radio is out of warranty.

I think I could live with -14F. Unfortunately the spec is +14, a number easily reached here in the winter. I agree that it is not normal for a rig to behave this way - I just wish Icom would admit it and fix it under warranty.

I just went thru this same problem.
The "Power Out" 'thermometer on the LCD display is simply an
"idiot's notification" of which of the 3 power settings you are using.
It does *NOT* indicate relative power out.
I wasted A LOT of time trying to reconcile the "FULL SCALE" reading
with the inability to trip a nearby repeater. I went down the
transmit-frequency-is-way-off path for awhile...

Yes -- it was the RF brick you mentioned.

Eric (VA2PTC) is absolutely correct about carefully charging/discharging the packs for the first 2 or 3 times in a NiCd pack.

The same applies to a NiMH cell, with an additional caveat:

The NiMH pack will take several cycles (as many as 8 or 10) to reach its full capacity.

If you carefully manage the charge/discharge cycles, you may find that your 9.6 volt pack will charge to better than 11 volts, and will hold this voltage almost to the discharge point!

Metal Hydride cells are manufactured with excess capability due to their intended use...which will run them near spec...but careful use can allow us to actually 'form' and use that excess capability!

The FT50 'flaw' is actually twofold: 1. The active memory and CPU are held on , even though the RF and audio are off (allows HT to 'wake-up at a predetermined time, also) and 2. the 'soft' switching is always powered. The 'fix' changes the amount of time that the power switch needs to held down to turn the unit 'on' by changing the scan time from several microseconds to about half-a-second, and the second throttles the CPU back to a few microamps and lets the lithium cell hold the memories.

It will STILL kill the pack given a couple of days. (On the ICOM T81a that I just got, you are warned about this...easy fix: just remove the pack).

One more thing: If you have a microphone or headset attached, the VOX and mic power circuits are ALWAYS on. unplug the mic before you store the unit!

73!

Bill WA3RA

BTW...the 75 dollars is the standard minimum rate for an out-of warranty repair, less parts (one bench hour). If you ask nicely on the tech line, they will send you the parts and instructions.

4367. Problem with noise blanker on TS-440

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-10 00:00:00 UTC
From: Mike <ki5mp@DOTDOT.arrl.net>
Message-ID: <0elo4.2751$39.123334@news.corecomm.net>
Source record: 86109

Greetings everyone.

I have an intermittent problem with the noise blanker on my Kenwood TS-440 and was wondering if anyone could shed some light on it for me.

I have a Chevy AstroVan with lots of ignition noise (comes in through the antenna). I'm running a Hustler antenna with three resonators - 80M, 40M, and 10M. I haven't spent a lot of time really getting to the root of the problem by eliminating the source because the noise blanker on the TS-440 has been working quite well - until recently that is. On 40 meters the noise blanker works sometimes and sometimes it doesn't. The s-meter reading on the noise level on 40M is an S-9. Depressing the noise blanker button sometime wipes the noise completely out and sometimes it doesn't do a darn thing - making weak stations completely unreadable. On 80M, the noise level is a S-7 and the noise blanker consistently does a good job of cutting it out. On 10M, the noise level is about a S-4 and the noise blanker also consistently does a good job of cutting it out. The intermittent problem only appears on 40M.

Does anyone have an idea what may be going on?

Thanks in advance for any help.

Just a short comment from central CT. We have had many days with temperature
at 10 degrees or less and the radio worked fine. The only complaint is the
mic cord is very stiff until the vehicle interior warms up.

My Icom 2100H has worked fine every day this winter... Its been in the
single digits and teens consistently this winter and never a problem... I
have been considering the 207H so that I can
have 440 in the vehicle too.. tried my W32A mobile... but you know how that
goes with intermod
when its hooked into a mobile antenna.. swaying from the current subject a
bit.. How is the 207H as far as intermod goes on the 2m side? Sounds like
most owners of the radio are happy with it..

The DSP is the same as it is in the PCR1000 and in the 706 MKII TRX.
It is the UT106.....

it has a multi-tone notch (automatically ONLY) switchable on/off and a noise reducer working on 15 levels or so. But this seemed worthless to me in the PCR1000.
The UT106 lacks functions in bandpass filtering and peaking for digital modes.

hope this helps.

Message-ID: <8804mckvj1@galileo.ticon.net>
Source record: 86119
Cross-posted to: rec.radio.amateur.equipment,rec.radio.shortwave,rec.radio.swap

(Will try this again..clearing up a few spelling errors with entire info)

For Sale: One AOR AR7030 Shortwave Communications Receiver.

This unit is in "Pristine" condition. I'm just not saying this..I mean it !!! Not one scratch,or wear marks on it ANYwhere. Looks/operates like a brand new unit. About 2 years old....when used it has always been treated with great care. Covered when not in use, and I don't touch those "Nasty" cigar-attes..and clean hands are the word before I touch ANY of my equipment (I'm very strict on this). Has had very light use.

I purchased this set brand new about 2 years ago. Case has never been opened, and NEVER have had a problem with this set, ALL works/operates 100%.

This is the Standard version of the AR7030, it actually has a MUCH better tuning knob smoothness "feel" than my "Plus" version...I still have a Plus version..and it's tuning knob is stiff and sluggish. Also ALL current AR7030's (serial nos over 102050..Standard and Plus units are both affected) now being made are missing a die-cast cover that encases the DDS circuit. This sample is NOT missing that Die-Cast DDS cover.

All accessories that I received of course comes with this set, Remote Control / Power Supply / Box / Manual / Every plastic bag /packing... etc.

Selling this as it is surplus (too many sets around and not being used at all).

Will sell this set for $ 700.00 (firm). Offer valid in USA only . Shipped UPS Ground Shipping/Insurance as well (lower 48 Only). No C.O.D's. Cashiers Check or Money Order will get it faster to you..however I will accept a personal check with the understanding that I will not ship the set until the it clears...so 14 days after I receive your personal check in the mail.

Please contact me if you have any additional questions, or if you wish to have pictures emailed to you that I have of the actual unit. Email me direct, not to this newsgroup.

Regards,
Dave

4379. Kenwood VC-H1 questions

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-10 00:00:00 UTC
From: Keith McQueen <n7hmf@ucares.org>
Message-ID: <38a39954_3@news.sisna.com>
Source record: 86121

I just bought a Kenwood VC-H1 to use for a field unit for ARES SSTV operations. I have successfully interfaced it with my non-Kenwood HT's, but I still have some questions. (The manual is very poor IMHO).

1. Is there any way to set an SSTV transmission mode other than Fast-FM and Robot-36 besides sending it a picture or hooking up a computer?

2. Once the mode is set, is there a way to SAVE it?

3. How do I build a cable that connects the COM jack on the side to my PC? (Is there any magic in Kenwood's cable, or can I just hook up RxD, TxD, and Gnd?

4. Assuming I build a cable and it works, are the commands listed in the back of the manual active through that port? (The manual implies that the commands for the COM jack and the DATA port are different...)

5. Is there any way to adjust the light sensitivity of the camera? It seems to wash out the picture at fairly low light levels.

6. Page 8 of the manual says to capture an image you "...turn and focus the camera...". Are they speaking in general terms or is there actually a way to focus the camera?

Pending the outcome of these questions, I am starting to think that I should have bought a TSC-70 instead...

Keith McQueen, N7HMF

4381. ADMS3 software for Yaesu VR-500

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-11 00:00:00 UTC
From: Dan Grassetti <dangrass@concentric.net>
Message-ID: <38A4280D.F2C96D50@concentric.net>
Source record: 85947

I recently bought the ADMS3 software for my Yaesu VR-500 and am running into some problems. I'm finding that there is no problem with downloads from the radio to the computer, but I'm having problems with downloads from the computer to the radio. When using Windoze 95 such downloads are successful only ~25% of the time, while when using Windoze 98 the ratio improves to about 75%. I run both of these environments under Virtual PC on a G3 Powermac. I routinely run all manner of Intel-based programs, including Goran's R2 freeware and the ADMS-1 application in the W95 environment with zero problems.

Question: is anyone else having similar problems with ADMS-3? Any solutions other than trying endless combinations of port speeds and buffer settings?

thx....

I am willing to trade a 4x Write, SCSI Internal CDRom Drive.
This drive was manufactured in February 1998, Bought in November 1999
with another exact type drive. Since I have 2 of these, I am getting
rid of the other. This drive writes at a fast 4x and works excellent
with "Adaptec EZ CD Creator". I was told that this was a "Toshiba"
drive but the actual manufacturer is "Matsushita". I have tested and
it writes fast and was detected by Windows 95 without external
drivers. On a scale of 1 to 10, this drive is a 9.5. No scratches on
the face whatsoever. I am willing to trade for any one of the below
items:

Uniden/President HR-2510 or HR-2600 w/ chipswitch or modified PLL
23 centimeter, 70 centimeter or 6 Meter FM Mobile rig (Kenwood, Icom
or Yaesu etc...)
VHF Duplexer for repeater (145 mhz range)
Galaxy Export Radio (AM/FM/USB/LSB/CW) w/ frequency counter.

Here is a picture of the drive.
http://members.xoom.com/cobra269/pics/CDRom4x.jpg

Cosmetics are not of prime importance but all controls must work and
radio must be in good working shape. I will only send the drive after
I receive the above item and will ship same day. E-Mail me with your
questions or for more info:

4392. Heath SB-220 repair question

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-11 00:00:00 UTC
From: Nat Davis <ndavis@vt.edu>
Message-ID: <38A47724.A8B42D21@vt.edu>
Source record: 85958
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I have an opportunity to purchase an SB-220 amp. It is in fair to good condition to look at but it definitely shows that it has been used. It also needs some repairs: the output band switch wafer has been arced pretty badly -- to the point that I would not try to use the amp before repairs (even though 10m is the only band where it truly does not seem to work). I am told it could use a new set of 3-500s, too (low power out with current ones). I would add some of the "Harbach" mods while I am at it -- parasitic suppression and new power supply capacitors as a start ...

Any suggestions on replacing the switch wafer? Looks like I would need to remove surrounding components just to get to it. A bit of a pain! Other suggestions?

What would be a reasonable price to offer for the amp as a "fixer upper?"

Thanks,

Nat
N4EL

Message-ID: <38A472C2.E549025E@go-concepts.com>
Source record: 85959

Donald,

I have a Kenwood ts-830s. Have owned it for 6 years. Sent in last year to AES to fix "no drive" problem on 40m. Cause was dirty bandswitch, plus a failed drive transistor. The bandswitch on the 830 is it's weak point, and is a not uncommon problem, but is usually fixable. I really like mine, but am going to part with it because I bought a new radio, and I don't need two hf setups.

I have the 830s, sp-230 speaker, vfo-230 (with 6khz/rev mod - essential), at-200 tuner (doesn't quite match the 830, but is nice), and an sm-220 with the pan adapter. If interested, email me and we can discuss. I haven't posted it here, because I'm planning on taking it to Dayton Hamvention, but I saw your post .....

My 830s was manufactured with 160m - 10m, including warc bands.

Ron Weaver KB8ELK

Source record: 85961

Mine has not been off for a whole day since I got it at Christmas, so
I don't know if I have this problem or not! :-) When I first got it
the FNB41 would not last 8 hours on recieve at work. I bought a FNB47V
and a MAHA charger to properly condition teh batteries, and now either
battery will work (recieve only) all day at work. Actually the FNB47V
will easily power it for a couple days with a little transmission
time. The key seems to be the charger, the MAHA charger will drain and
then charge the battey.

LOAD RESISTORS for testing audio amplifiers:

I can supply you with 200 Watt loads - either 4 ohm, 8 ohm, or 16
ohm resistive loads as follows:

Each set-up would consist of FOUR 50 Watt resistors wired for the
correct load impedence.
These are brand new DALE Gold Series (the best resistors you can get!)
Each set-up rated for 200 Watts would cost $25.00 plus shipping.

I can also supply these as 100 watt loads in either 8 ohms or 16 ohms,
for $15.00 each, plus shipping

>So is there a rec.radio.licensing or rec.radio.policy that
>we should post our ads to, now that you all busy deciding
>who is going to run your club?

There is rec.radio.swap, which is the *only* place for sale and
wanted ads are supposed to appear. But alas, people don't seem
to do that. They seem to think that discussion groups like
rec.radio.amateur.equipment and rec.radio.amateur.misc are
the place to post ads. So it is little wonder that discussions
which should only be in the rec.radio.amateur.policy newsgroup
wind up spamming other groups too. Monkey see, monkey do.

Larsen makes the best mounts. I know it will stay solidly on the car at speeds over 100 MPH. Lay down a heavy coat of paste wax before installing the magmount on the car. Then *leave it alone*. As long as the mount is undisturbed, it won't scratch your paint. What causes scratches is taking it off and putting it back on. Don't do that. Treat it like a permanent mount until you are ready to permanently remove it from the car.

That way the only thing that will scratch your paint is the coax fluttering against the car. To avoid that, drill a hole, use a Larsen thru-hole NMO mount, and then the coax can't touch the outside of your car. This is the only foolproof method to completely protect the paint. Your antenna will work better too.

On SSB, just turn the microphone gain down to reduce power (or talk softer).
In SSB mode on any radio, output power is linearly proportional to audio input.
(At least it better be, or the radio is broken.)

Lou,

I would go along with ICOM's saying that the "specs" are guaranteed to
+14 deg, but the radio should still work well below that temperature.
I have a 2350H, and I at one time owned a 2000H, a 28H, a 25H, and a
22S. All of these worked no matter what the temperature was here in
NE Pennsylvania. Shove that rig right back into ICOM's face and
insist they fix an obvious flaw with that radio.

Does anyone have any experience with this antenna? I wonder if the problems experienced by R-7000 owners with water getting into the traps also occur with the R-6000. I've heard that the SWR skyrockets on certain bands on some R-7000s when it rains. Any insights would be appreciated. Thanks.

I like my Icm 2100H. I head a early one serial # 400 ? and it runs hotter than I like to I turned the power to 40 watts and it is fine. No failures. I check it against a FT-2600 and I guess all the radios run hot if you talk for a while at 60 watts etc. The pwr settingsare 5, 10,55 watts on the IC-2100 H. I wish the mid stting was 30 watts. The receive is sensitive and whn you are near intermod alley you simply turn the Squelch/rf gain control up and the intermod goes away. you ahve to tuen it back dwon when you are on the fringe of the repeater or you won't pick up the repeater of course.
Fir $175 it is a steal.

Dean, If I remember correctly the power control on the face of the TS-440 would not work on SSB. You get full power output regardless of its setting. It works great on CW, AM, and FM. There is a pot inside that can reduce the power output.

I've had good luck with Larsen products.

No matter what you do, you are bound to get some kind of scratches from regular use of a mag mount. Obviously you can use something to act as a barrier between the magnet and the paint, but dont forget about the coax if it's touching the paint too. Wind can make it vibrate and rub the paint too. Make sure you get a good coat of wax and dont let water accumulate between the magnet and the paint.

Question for you vintage Heathkit guys...

Is the plate current meter from a DX-35 the same as the one used on the DX-40? I have a DX-40 with an incorrect meter, and I have a working DX-35 meter. Are they the same one?

73,
Dean / K5DH

I've used the R6000 for a little less than 1 year. I have no problems with trap arcing etc even when running 1KW (AMP Supply 450 ZC).

However the bandwidth on 20 changes when it rains. It is still resonant at 14.20 but the VSWR at either end goes up to about 2.2 to 1 from 1.5 to 1.

The other bands do NOT exhibit this special "feature".

Deacon Dave, W1MCE

Donald Young wrote:

Check out the field notes on the Kenwood web site. there are a couple of
refernces to TS440 VFO / diode switching problems.

Good luck with it. It was (still is) a very competitive transceiver that
actually works like one. The computer interface is basic but works and you
can at least get a soldering iron inside and fix most bits with a knife and
fork on the kitchen table.

The biggest problem with mine is the membrane behind the function buttons.

73 & good luck.

4450. through glass antenna w/ tinted glass ?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-12 00:00:00 UTC
From: Martin Walker <mbwalker@netonecon.net>
Message-ID: <Xrop4.5604$yU.126302@newscene.newscene.com>
Source record: 85855
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

I just purchased a '98 Ford Ranger extended cab pickup. I'm considering a through the glass antenna but I'm concerned about the tinted rear window where I'd like to mount it. I already have one of these antennas installed on our '94 Thunderbird rear window (no visible tint) and it serves me well. I've heard that sometimes the tint can cause problems with the signal passing through the glass. The window is an OEM "solar tint". Does anyone have any experience with this situation?

> of commitment. Wow!! Enough said?

If he's like the rest of us in the US he probably has a service contract that states that if he looses his phone he's responsible to get a new one and continue his service within 45 days or default on his contract and pay $175 for his basic phone.

This happened to me. I was in a store and lay my cell phone down on the counter and sure as shit within 30 seconds a female welfare collecting, crack sniffing, breeding like a roach, thieving porch monkey decided to steal my phone.

Cellular One, my cell carrier, wanted $175 to replace my Nokia 5120 or pay $175 for breach of contract. Luckily I was able to find a brand new 5120 for $100 and Cell One added to my plan for free.

Be easy on the guy. That free phone you talk about isn't really free. Depending on which model he bought that phone may have been a good deal for that model without a service contract if the phone was new as stated. Take a look on ebay and see what some of them idiots are paying for used items. Make you wonder? Enough said?

4468. FA: Hallicrafters SX-62 Receiver

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-12 00:00:00 UTC
From: jbr101@my-deja.com
Message-ID: <883tk4$5j3$1@nnrp1.deja.com>
Source record: 85905
Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.equipment,rec.radio.amateur.boatanchor,rec.radio.swap

I have a Hallicrafters SX-62 receiver for auction on eBay.

The URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=253218957

and the blurb is

This is a very restorable example of the venerable Hallicrafters SX-62
receiver, which offers continuious coverage 540 kHz thru 109 mHz.
Controls are pointer reset, band selector, receive/standby switch,
crystal calibrator on/off, noise limiter, tuning, volume, reception
(mode) control including phono input, selectivity (3 crystal positions
and 3 LC filter positions), tone control, and sensitivity (RF gain)
control. This is a true high-fidelity superheterodyne receiver, with a
pair of 6V6's providing an honest 10 watts of superb audio. The giant
sliderule dial features a back-lit display that illuminates the band
selected, and the flywheel tuning mechanism provides silky-smooth
station tuning. A very impressive looking receiver, which receives
AM/CW/(SSB with careful tuning !) up to 32 mHz, with FM also 27 - 109
mHz. This particular all orignal example is in reasonable cosmetic
shape, although the cabinet could use a repaint and a previous owner
engraved his/her SS number inconspicously in the corner of the bezel,
which has some rub spots. The bandswitch knob is starting to crumble
and should be replaced; otherwise the radio presents well. I started
this restoration by verifying that the power transformer is good, and
that a couple of tubes need replacing, but I didn't get much further
than that in a year so I figured it should go to someone else for
completion. As with all old electronics, this is sold as-is, although I
will guarantee that the power transformer is good. This should restore
well and be a worthy addition to someone's collection; once you hear the
wonderful audio and experience the ease of using this wonderful old
radio, it could well become your favorite. Includes a copy of the manual
and Sam's Photofact Folder.

Closes 2/13/00.

Thank-you.

I plan to get back into ATV and want to know if anyone is using
what was called back in the 80's a "J-Beam" antenna. It was made by
Spectrum International and the model number was "88".

I own one of these and trying to remember how to put it back together.
Before I install it I was wondering if anyone might still have the
single page instruction sheet that came with it and if I could get a
copy of it.

I also would like to know what other ATV people are using and if I
should stick with this antenna or go with something else.

thanks,

please email direct: n1kk@netzero.net

I just got a ts 870 a week ago. Been using a ts 950 sd the past 10 years. I have also had the Icom 775 and the Ten Tec Omin 6. Working both cw and ssb(mostly cw) , i find the 870 to be in a class all its own. The qsk on cw is at least as good as the Omni6. The 870 is superior by far to the Omni on ssb with its tuner and moniter circuit and its ability to let u tailor the TX audio. Lets hear what you other 870 owners think,regards,Mike PS. The 950 sd makes a reliable "back up",but stoneage in comparison

HEY JOE,
My Boss is one of those extra class whiners, you seem just like him,
everyone is below you because you are an extra class operator, whoop de
do. You are one of the same idiots that beat everyone down because what
you have or do is always better than anyone else. I look forward to
running into you at Dayton, I'm sure I will be able to identify you by
the stupid ass shirt you will have on. Just curious, are you a tightwad
like most all the rest of the xtra class people out there, you know,
the ones that beat you down on price for a piece of equipment, and spend
half the day doing it, only to piss everyone off and never buy anything,
no matter how low the price is. I bet you also step over a dollar for a
dime.... don't you?? I don't understand the big ego thing attached with
the license, but one thing is for sure..... you are the only one that
is impressed with yourself. I will leave you with a acronym, mister CW,
it ought to be real easy for you to figure out..... FOAD dickhead.

4487. Engine Noise 2000 Ford Expedition

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-12 00:00:00 UTC
From: "Dr. Edward H. Scissons" <psa@sk.sympatico.ca>
Message-ID: <Uigp4.149$ysd1.3473620@tomcat.sk.sympatico.ca>
Source record: 85924
Cross-posted to: rec.radio.amateur,rec.radio.amateur.equipment

I have a new 2000 Expedition and the electrical noise generated by the engine etc. is terrible. Operating mobile is impossible. I had a 1997 Expedition and the noise was fine. The noise comes in through the antenna, not through the dc leads. I have had it in to the dealer and they played with it for a while and they will do so again next week. I wonder if anyone else has had a similar problem with a 2000 Expedition?? Ford changed the engine etc. on the 2000 model so it is different from the 1997 that I had. I also have a 1998 F-250 Ford and it is fine.

4488. FS: Grundig Yacht Boy 400PE Portable receiver

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-12 00:00:00 UTC
From: Brian Harrison <bharrison@apple.com>
Message-ID: <B4CAFDC7.64F0%bharrison@apple.com>
Source record: 85925

Hello, and thanks for reading:

I have an almost new Grundig Yacht Bob 400PE portable receiver for sale.
This radio was purchased for a nephew who was to go overseas with the Peace
Corps, but ultimately didn't - used very little, maybe 5 hours.
Works very well, though...

See the latest Amateur Electronics Supply catalog page 32. or info at:
http://www.aesham.com

Covers 1.6 to 30 MHz, all SW bands, FM broadcast band (stereo with
headphones), AM and long wave broadcast bands. Direct keypad frequency
entry or scan tuning with 40 memories, SSB reception with fine tuning
control, high-low tone switch. Tilt stand, telescoping antenna.
Multi-function backlit LCD display shows dual zone 24 hour time, frequency,
band and signal strength. Dual selectivity. Automatic turn-on and sleep
timer.

Includes external reel-up antenna for shortwave, carrying pouch, manual, and
AC adapter (otherwise uses 6 "AA" batteries, not included).

approx 4.5" height x 7.75" width x 1.3" diameter, 1.5 lbs.

I'll ship to your door (in the US) for $169.

thanks, and regards,

brian

4520. Amateur Radio in a Toyota

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-12 00:00:00 UTC
From: David Kelly <dkelly@hiwaay.net>
Message-ID: <38A4D6BC.1C4C09FD@hiwaay.net>
Source record: 85994

1) Does anyone remember what issue of QST covered automobile
manufacturer's policies as to transmitters?

2) I remember General Motors, Chrysler, and Ford got awfully high
marks for documenting the right way to install commercial and
amateur transmitters in their vehicles. Is there a generic and
understood industry term for such documentation? Maybe I just
don't know what to ask for?

3) Last week I made quite a stretch and purchased a 2000 Toyota
Avalon XLS. Registered at Toyota's online owner's site. Asked
for help in where to put an antenna, mount the radio, get power,
and route the cables. All to stay away from the ECU, airbags,
etc. This is what they said (looks like a form letter):

> From: CR22@toyota.com
> To: dkelly@hiwaay.net
> Date: Fri, 11 Feb 2000 09:46:49 -0800 (11:46 CST)
> Subject: NCAC/Kelly, David - Toyota
>
>
>
> Thank you for contacting Toyota Motor Sales, U.S.A., Inc.
>
> We do not recommend modifications to Toyota vehicles. Should you need technical
> specifications, you may contact our Materials Distribution Center to purchase a
> repair manual.
>
> We appreciate you taking time to write.
>
>
> National Customer Relations

4) I haven't checked to see if there is a Genuine Toyota Trailer
Hitch. Doubt it. But none the less the car is rated to tow a
2000 pound trailer. If Toyota does not recommend modifications
then how the heck could one tow a trailer?

5) Am having another worse time trying to figure out *where* to
put a radio in this car. Looks like its going to have to have
something small such as an IC-207 or TM-G707A, or FT-90. But
even then there just doesn't seem to be any good place to put it.

--
David Kelly N4HHE, dkelly@hiwaay.net

Greetings Dave..

You actually shouldn't have very much of a problem locating a small muffin fan. However, if custom parts are ever required, you'll understand more than most why I stay away from any manufacture that changes its radio line [typically] in less than 6 months.. Trying to locate spare parts for obsolete Kenwood radios *can* be an interesting challenge.

Have you tried http://www.kenwood.net/help.cfm yet? In addition, although the link *may* be dead another source of information may be http://www.aesham.com/mfg_manuals.html .

Of course the home location is:
http://kenwood.net/

Cheers,
Gary

Thanks for the info. I'm not against drilling a hole in the roof and there are several members of our club willing and ready, with hole saws in hand. The problem is that I only have about 8 inches of clearance when I pull in my garage. The through glass antenna could be mounted low enough to not be a problem. I'm now thinking about a 1/4 wave through the roof (would need to take daily hits from the door opening) or possibly a trunk lip mount on the edge of the hood. Operating 2 meters, by the way.

Up to five users at one time, all from one standard dual phone jack.
Supporting up to two outside phone lines, this system allows you to place up to eight cordless handsets throughout your home or office, all operating off the corded desk station and a standard phone jack. Unlike other cordless products, the desk station and up to four of the cordless handsets may be used simultaneously.

Multitasking,
The Gigaset 2420 offers all the tasks a small office or busy home demands from the desk station and each of the handsets. LCD screens that handle Caller ID* and Caller ID on Call Waiting*; Speed dial/redial, etc.; Call restrictions; Handset paging; a room monitor feature; A remotely accessible digital answering machine that answers separately for each line; A Smart Fax/Modem Port** and much more.

Superior Reception and Security,
The system's 2.4GHz frequency and high-speed digital voice encoding provide reception that is superior to other cordless technologies and almost indistinguishable from corded phone systems. Frequency hopping spread spectrum technology ensures unparalleled security.

And More Asking $300.00 + $10.00 Shipping includes extra charger & shipping Unit Retails for $379.99+ Tax

Comet, and others, have models that are spring loaded, and you pull up a
little bit - then fold it down. Very quick and easy. Much better gain
than your typical glass mounts.

4528. Brand New DeltaForce Magnums on Ebay $259.00 (DUTCH)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-13 00:00:00 UTC
From: Antenna Warehouse <kingpop@cis.net>
Message-ID: <38A6F094.1F1049B6@cis.net>
Source record: 85798

>>>>> ONLY 8 HOURS LEFT!!!!!!!<<<<<

I have 15 of the DeltaForce Magnum SSB/AM/FM/CW 10 meter Transceivers up on a Dutch auction on Ebay at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=255222923

These radios are designed and production supervised By RF Limited, and are packed with features that no other radio on the market has. Like RF Limited's Turbo Echo, and no squeal all mode talkback. They will also cover from 25.165-29.699 in 10 bands once the MARS/CAP Modification is performed

This is a Dutch auction, which means no worries about being outbid at the last moment, or the price sky rocketing because of bidding wars. Your bid of $259.00 plus shipping gets one to you. Shipping will be based on exact cost to your location via USPS insured priority mail from zip 52730. If you want to know exactly how much shipping is, go to:

http://postcalc.usps.gov/

and use the rate calculator to find out. The shipping weight is 6 pounds.

Deal with confidence, I have over 75 positive feedback comments from successful deals on eBay, and no negatives

Thank you

Tim

4532. HELP Please Yaesu FT-747 Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-13 00:00:00 UTC
From: radiotek@pacbell.net
Message-ID: <38a6fe4b.14145059@news.swbell.net>
Source record: 85802

Hello,

I have a Yaesu FT-747 HF rig. A few days ago, I was talking with this guy on 15m. Once we finished our QSO, I left the rig on but turned down the volume. But, a couple of hours later, I turned up the volume and I noticed that there was something wrong!

I was still on 15 Meters. The audio just did not sound right. I left it in USB mode and that was the same mode that was on when I came back. The audio now sounds very NARROW on USB. When you switch from USB to CW modes, you can hear the audio change from wide on USB to narrow on CW. I cannot figure this one out!!! And no, this rig does not have IF shift or anything like that.

However, LSB sounds just great! I cannot figure this one out. I am about ready to through this away!! j/k hee hee
I wonder if anyone else has come across a problem such as mine.

I don't know why this would do that. It may be a relay is stuck in the ON position to switch the narrow audio filter. And this may only effect USB & CW, not LSB. But, this radio does not have the capability of narrowing the audio on USB! This radio does have a narrow CW & AM filter. But, the filter on CW sounds more narrow than what I am experiencing on USB. What I think is happening is: normal SSB filtering is ~ 6 kHz wide, but now it seems to be stuck on ~ 2.5 kHz wide filtering.

Can anyone help me??? I do not know what to do. I do not want to take this to Yaesu, it may cost me $100 or so.

Please E-mail me: radiotek@pacbell.net

Thanks & 73,

Mike KQ6MU

Likely not, Bill. 1.25m is 220 Mhz and not in many HTs these days.

I think the T81 is 6, 2, .70 and 1.2 GHz

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-13 00:00:00 UTC
From: Bill Gallagher <KS3Y@prodigy.net>
Message-ID: <8871d8$4bpk$1@newssvr03-int.news.prodigy.com>
Source record: 85805

The most common cure for this problem: Simply open the rig, disconnect and reconnect all of the interconnecting cables, and make sure that all of the boards are correctly seated and tightened.

There IS a diode to switch the filters in and out, and to choose just which side of the SSB filter is used, but usually it does not fail...the connector just creeps loose.

Take Note: This radio is a great little rig, but it does need regular preventative maintenance!

73!

4536. FS: Kenwood TM-221A PACKET 2-mtr

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-13 00:00:00 UTC
From: "Alan D. Wilcox" <awilcox@suscom.net>
Message-ID: <38A70947.B4C2CF82@suscom.net>
Source record: 85806
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.digital.misc

After being off the air for about 5 years or so, it's time
to sell this fine rig and the 1270B TNC.

Kenwood: 5w or 45w, 144-148 MHz VFO with 14 memory channels.
Scan & CTCSS. With MC-48B DTMF microphone. Original manual.
Prob needs a new lithium battery; noticed it forgets memory
settings when power has been off awhile. Excellent condx.
See photo at http://yourpage.suscom.net/awilcox/Sales/Kenwood33b.jpg

I bought it new in '87 ($340) and used it as base station and
later connected it to MFJ-1270B packet TNC.

TNC is the standard MFJ with instruction manual. I added in a
circuit board for tone alert when digital connection is made
to the TNC: the Sonalert in photo does a Morse "C" for "connect."
Front view: http://yourpage.suscom.net/awilcox/Sales/TNCa34b.jpg
Rear: http://yourpage.suscom.net/awilcox/Sales/TNCb36c.jpg

Asking ...
Kenwood $ 150
MFJ TNC $ 70
For both together, $200, and I'll include the interconnect cables.

Terms... prefer cash or money order. You'll pay shipping and
insurance from 17701 (central PA).

I have had a large number of people check-in, the ICOM users net, with the 756PRO. The overall impression is good, most all of them, like the rig a lot.
These rigs sound great too.
See for yourself ICOM users net; Sundays @ 1700Z, 14.317mhz.

Mine has that membrene switch problem as well. I understand it is a common problem with them. It has something to do with the adhesive used to keep the assembly together. Somewhere, there are some instructions for disassembling, cleaning, and reglueing it. I recall it was a rather tedious process, but worth the effort if they are really bad.

73,

Barry - N4BUQ

I have a Yaesu 2100 B amp. I am wondering abt the output that it should have. When I load it, it will load to abt 350 - 400 watts on am. Isn't this a bit shy of what it should max out at? If you have one or know the answer to this, pls email me. I have had this amp for a while but don't know much abt it.

Tnx

Bill

Hi:

I have this old tube radio I acquired from a friend some time ago.

The model number is 9R-4J.

The manufacturer is difficult to tell. It has what appears to be a
company logo on the upper right corner of the unit.

It is either "TR10" or "JR10" or "TRIO" or "JRIO".

I would like to learn more about it (age, value,etc.)

The unit works and is in excellent condition.

Attached is a photo.

Thanks in advance for any responses.

From: Olivier Gaude <ogaude@club-internet.fr>
Message-ID: <887af2$2a7$1@front6m.grolier.fr>
Source record: 85823

Hi From Olivier F5PYF!

I bought a Kenwood TH-D7/E handheld dual-band VHF/UHF transceiver with an embedded packet-radio 1k2 and 9k6 TNC.

Unfortunately, the embedded TNC seems to have some problems :

- The TNC doesn't send an ACK frame after a well received packet until the distant station asks this ACK.

- Impossible to switch the TNC in KISS mode (after KISS ON, RESET). The protocol seems to be wrong and not recognized by the terminal program.

I was told about a new TNC firmware (TASCO) but no news since 3 months, all informations will be gratefully received.

Regards,
Olivier F5PYF.

Martin,

you're out of luck. A metal polarization film is used.

BTW, I have a '97 Ford ranger, and have had zero problems on VHF/UHF, as well as great simplex coverage - much more so than a mag mount or on-glass compromise antenna would provide.

Then again, the truck was in the driveway for all of 20 minutes before I had the dome light out and was punching a 3/4" hole in the roof metal above for a permanent mount Larsen antenna. Never a leak in 20 years of mobile installations.

Cheers,
Mike N5MJ

Look who the kettle is calling black!! HAHA! You wouldn't know
pompous if it bit you in your butt! I suggest you reread my post after
setting your emotions aside. First off.. how did I admit cw is less
important?? REREAD!!!! I said nothing of the sort!
I am not crying at all, if you had actually read my post, I said I
was in FAVOR of reduced cw requirements, all that bothered me was the
anti-code people saying "stop the whining" when I remember this topic
being all over packet and the newsgroups from years ago with them doing
just as much as the other side! Talk about hypocrites! Also, I am far
from the only vocal person on this side, and not all of them are extras.
Do you actually ever get together with people of differing views and
talk about this rationally?? Judging by your response, I doubt that you
could take the emotion out of it and discuss this in that fashion.
As for cw requirements being eliminated....I doubt anything I say
can change that, or are you going to tattle on me to the FCC and make
them change the rules? OOOOHH...I'm so scared!
I made my own bed? REREAD!!!! I am ready to welcome the new extras!
REREAD!!! I think I made things pretty clear, I have reread my post
several times and bounced it off several friends, all think its pretty
clear where I stand on this and its not too far from your opinion.

Tom: The issue is generally w/in glass defrosters. I have not heard of an issue w/tinted glass. It's a truck. Drill a 3/4" hole in the roof, mount a antenna that will give you good performance and enjoy it. It's only an incremental amount more work.

Mark you have just asked a question similar to "I want to buy a ball".
Could be baseball, golf ball, bowling ball, ect.

It would be helpful if you could describe the type of communications
that you are interisted in. The ham bands go from just above the AM
broadcast band to way above the TV bands. Some are mostly for short
range communications and use equipment similar to the police and taxi
cabs . For this you can get a license that does not requir the Morse
code. Other transceivers will normally work between 1.8 MHz and 30 MHz
and are for the longer ranges such as from 100 miles to around the
world.

Incase you did not it you need a license to operate any of the ham
radios. YOu have to take some tests to do that . YOu can start at the
ARRL web site of arrl.org to find out more.

I have not looked over their site but there is a very large store for
ham radios called Amateur Electronic Supply. You might look at
www.aes.com to see what they have.

Also when you get the radio you will need somekind of antenna to go with
it. It can be as simple as some wire bought at the local hardwear
store.

I subjust that you get a book called the Radio Amateur Handbook from the
ARRL site. It will tell you alot about the world of ham radio, how to
put up simple antennas and while it might be a bunch over your head it
does have a lot of technical information.

4576. Yamaha RX-V890 For Sale CHEAP!!!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-13 00:00:00 UTC
From: doogin69@my-deja.com
Message-ID: <8851gltfv1@nnrp1.deja.com>
Source record: 85864

For Sale at:
http://auctions.yahoo.com/auction/11981781

RX-V890
340 Watts of power + Full CINEMA DSP Capabilities

Natural Sound A/V Receiver

FEATURES

ON-SCREEN DISPLAY Lets you confirm operation and includes speaker display that makes it easier to balance speaker output in the Speaker Test Mode with a graphic representation of the speakers. You can select each of the DSP programs with one touch on the remote control, allowing you to compare the effects from your listening position.

RECORD OUT SELECTOR You can listen to one source while you record another.

70MM MOVIE THEATER CINEMA DSP Multiplies the effects of Dolby Pro-Logic and Yamaha DSP to recreate the movie theater experience in you home. This mode was created based on input from movie sound technicians to reproduce sound images the way the director intended them to be heard.

FRONT PANEL A/V INPUTS For easy connection of a camcorder or other A/V components.

DUAL CENTER CHANNEL OUTPUTS For utilizing two center channel speakers for a larger system or with a big screen television.

PRE-MAIN COUPLER AND SUBWOOFER OUT WITH LPF Lets you add signal processors or larger amplifiers to your system. Also allows for direct subwoofer connection. 200Hz Low Pass Filter ensures best possible subwoofer performance. Makes for greater system flexibility and room for growth.

35MM DOLBY PRO-LOGIC ENHANCED Another unique Yamaha DSP program that creates the same type of sound you experience in movie theaters with multi-speaker arrays.

10 DSP PROGRAMS In addition to Yamaha's unique 70mm Movie Theater, TV Theater and Dolby Pro Logic Normal and Enhanced programs, the RX-V990 offers a special sports program and five HiFi DSP programs: Concert Hall, Rock Concert, Stadium, Jazz Club and Church.

YSS-223 LARGE SCALE INTEGRATED CIRCUIT Yamaha's amazingly powerful, compact LSI provides extremely accurate Dolby Pro-Logic decoding and digital sound field processing.

64 KEY LEARNING REMOTE Lets you program and control additional components such as a VCR, Laserdisc player, or TV.

5 AUDIO AND 4 A/V (WITH S-VIDEO TERMINALS) INPUTS This receiver lets you hook up not only five audio components, but four audio/video units as well. You also get S-video terminals. All providing extensive system connectability and room for growth.

LINEAR DAMPING FACTOR CIRCUIT A linear damping factor of 200 (8 ohms 20 - 20 kHz) means plenty of ability to stop the speaker cone from vibrating when the signal stops. The result is clear crisp pure sound and significantly improved frequency response.

40 STATION RANDOM ACCESS PRESET TUNING Preset stations can be grouped in five sets of eight, according to AM and FM, or musical genre, or any order you desire.

SLEEP TIMER Switches unit off, after up to two hours of play in :30 increments.

A/B SPEAKER SELECTOR Allows use of one or both sets of speakers.

BASS EXTENSION CONTROL It accentuates the base by providing a 7dB boost at around 70 Hz.

TONE BYPASS SWITCH Allows bypass of bass and treble, to provide a flat frequency response without readjusting the tone controls.

2-WAY BINDING POST SPEAKER TERMINALS Banana plug compatible on all channels. Permits the use of a variety or speaker wires and connectors.

REMOTE CONTROLLABLE MOTOR-DRIVEN MASTER VOLUME CONTROL With the aid of the LED indicator, you can see and hear your volume adjustment right from your seat.

```
--------------------------------------------------------------------
FORSALE - MINT Icom 735 HF rig
--------------------------------------------------------------------

I have an absolutely mint condition Icom 735 HF rig that
I'd like to sell. The rig includes the optional 500-Hz
CW filter, the optional EX-243 electronic keyery,
and the original hand mike with up/down controls. I bought
the rig as a "backup" and have never used it (other then to test it
out for about 1 hour). It's like new. I also have the original box and
manual. It's also ALWAYs been in a smoke free environment.

ICOM 735/cw filter/elec keyer/mic $575.

Guaranteed that you'll like it.

WARNING!! The specials flyer recently sent out by AES lists the
ICOM IC-207H for $299.95 and shows a picture of an IC-2710H. The IC2710H
has dual band display where the IC-207H only has a single frequency
display.

4589. Re: Amateur Radio in a Toyota

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-13 00:00:00 UTC
From: Richard Ferguson <raferguson@worldnet.att.net>
Message-ID: <38A6310C.B2F9F145@worldnet.att.net>
Source record: 85877

I have had radios in a couple of Toyotas, including HF, no special problems. A friend of mine has 2M and 440 in his recent Toyota. Basic good practice, such as adequate power connection, adequate grounding, and mounting the antenna away from the passenger and engine compartments, should prevent problems. I tend to drill holes in the roof of the car, but you may not want to do that with a new Avalon. a Trunk lip mount might be a good choice.

I recall the QST article also, but don't remember the details. You may not be able to get info from Toyota on radio mounting. The US makers sell to police and fleets, who expect to install radios and expect to get some advice on how to install radios. Few police departments drive Toyotas.

If space for a radio seems tight, look at one with a removable faceplate, and locate the rest of the radio under the seat. This is how I mounted my IC706 in my Subaru.

I would not expect any special problems. Good luck.

In NAZI Germany they had an "official" radio set to RX a single
channel. If you were to break the seal or modify it in any way
the penalty was DEATH. With all this emerging technology the
Klintonistas only want you to know how to push the buttons on
all the wonderful little black boxes and to dutifully pay all the
little ALGORE surcharges. They don't want you to have ANY
inkling on how the innards of these wonderful gadgets work or to be
able to build anythingof your own. QRP homebrewing is
becoming a big thing. Perhaps soon we will have to "register" our
experiments with the FCC and obtain type acceptance on
everything that xmits. An INGNORAMUS is a socialist/democrat's best
customer

> 4) Yaesu ft2600m

I was also recently in the market for a 2m mobile and looked at a few of the radios you mentioned (Icom 2100H and Yeasu FT2600). While I was trying to make up my mind, the dual band Icom 207H went on sale for $315 at HRO. After a bit of deliberation, I decided to spend the extra $100 to pick up support for 70cm. I've only had the radio up and running for a few days now, but my initial impressions are favorable. This seems to be a good radio for the money.

Back to 2m rigs... In my opinion, the Icom had somewhat better audio quality and a more logical control layout. The Yeasu has a no nonsense look and an extra 10 watts of transmit power. While I'm generally a Yeasu fan, I have to admit that I was thinking pretty hard about the 2100.

Here's a link that might help.

What you heard were complaints about an arbitrary fence that the FCC has considered obsolete for quite some time.

What I'm hearing now are a bunch of petulant crybabies screaming that "it ain't fair!" when someone else gets something without having to jump through the same hoops that you had to.

If you don't see the difference, then I can't explain it to you.

I don't think so. Obsolete is not the question. It is an authorized mode for ham radio. If obsolescence is an issue, then AM, RTTY, SlowScan and many other modes should be removed from the amateur service and the questions dropped. The way technology is going, packet and many of the relatively new modes should be outlawed as well.
The thing that bothers most of us, especially extras, is the cry baby attitude concerning the whole issue from the people who want to work as little as possible to get what others have. I liken this to the welfare mentality I see rampant in society today. If you ever had to work like I and many others did to attain something worthwhile I guess YOU would understand what we feel. Obviously you don't!
Then when all our hard work is thrown out the window, you wonder why people scream? Are you sure your thinking cap is on right?? Or are you so far removed from reality that it doesn't make sense?
Certainly some of the rhetoric on BOTH sides has been absurd, but the anti-code side has been just as whiney. That was my point.
Then the thing that really makes me wonder about the intelligence of some members of our hobby, is if I make even a little stink about this, I'm made out to be some kind of arrogant exclusionist trying to keep everyone else from enjoying ham radio. NOT! I accomplished it, so can anyone else who puts in the effort. Now certainly the lowering of the cw requirement may have been timely, but 5 wpm? only time will tell.
I personally don't think this or even a dropping of cw will save ham radio. This present move by the FCC, will only encourage licensed hams to upgrade. I hardly think hardcore CB'ers are going to flock to our ranks, with the exception of those who will become good op's, maybe some others who disliked cw, but not in droves!
Interestingly enough, I was for the lowering of the cw requirement for general and advanced, maybe even extra to something I felt was more reasonable, 10 wpm maybe. But 5 wpm? As a VE, I had to pass a guy who recorded the dots and dashes onto a paper, then he transposed them to the corresponding words. Everyone in my VE team felt that the rules didn't say that it was wrong, but it sure didn't show any proficiency! I had to pass the guy, I didn't like it though.
As I said, only time will tell what will happen, but I for one think that this move by the FCC will not have the desired effect of growing ham radio, nor do I think that the new upgrades will pollute the extra class bands.

You pompous jerk! You just admitted that Morse is LESS important than
RTTY, packet, etc., and yet you still defend the old Morse
requirements?! What a hypocrite!

> The thing that bothers most of us, especially extras, is the cry
> baby attitude concerning the whole issue from the people who want to

The ONLY one CRYING now is YOU!

And once again, you make a pompous statement like; "The thing that
bothers most of us, especially extras...". HA! I'm sure most Extras
are reasonable people, not part of YOUR vocal PIG-HEAD minority - who
ticked everyone off to the point that the FCC has virtually ELIMINATED
the Morse code requirements.

WHY DON'T YOU JUST SHUT UP, BEFORE YOU GET MORSE CODE REQUIREMENTS
TOTALLY ELIMINATED!!!

From: kr4wm@mindspring.com
Message-ID: <MPG.1311e217414573cd989682@news.mindspring.com>
Source record: 85696

Greetings all- I have a question for the newsgroup. I purchased a ProStar-400 that was destined for the Chicken-Band market, which was modified for the dealer prior to arrival. I bought this particular radio for a reason- low power consumption- QRP power levels, and -hopefully- it'll make a nice compact portable solar-powered 10m station.

This radio appears to be identical externally to the Radio Shack 10m rig that currently sells for $139.95, with the exception of having a CW key jack (I assume the 10m Radio Shack rigs have this, I only looked at the front of the radio). I bought this radio new-in-the-box for a substantially less than the Rat-Shack version.

Now- the problem. I see it has what appears to be an "accessory board" soldered to the chassis, and it's "possibly" a factory mod so that whoever makes the Radio Shack 10m rig can "mod" the radio for illegal chicken-band use. I -could- use the rig as-is, but the VFO is stuck in 15KHz increments (channelized for CB use). Is anyone here familiar with this "board", and can it be removed to restore 5KHz or possibly even 1KHz spacing? I don't have any schematic for it, so don't go there. I'm assuming that some traces may have been cut on the main board, and don't know where to look. Also, if anyone DOES have a schematic, perhaps you can point me in the right direction to restore the CW function to the board? What I'd really like to do is find out who -does- the mods so they can tell me how to *un-do* it.

73 all, -Web KR4WM

4611. 1000MP Poor Performance

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-14 00:00:00 UTC
From: John <hydro@fx2.com>
Message-ID: <bkVp4.3246$Cx.22288@newsfeed.slurp.net>
Source record: 85699

Well I finally got a Yaesu 1000MP that everyone is raving about. The transmitter DSP sounds great as long as you do not used the speech processer (the 2.4 filters are in line when speech processer is on) The bad points, the receiver is VERY noisy with the (dsp off) while trying to listen to weak signals. The filters are way to narrow (2.4) and the overall receiver sound terrible. My old rig yaesu FT-102 sounds like a hi fi stereo compared to the 1000MP. Pretty lousy for a rig that cost way over 2K . Are there any other 1000MP owners that are as unhappy as I am about this radio ??
John.....

4612. Re: Help with antenna impedance required

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-14 00:00:00 UTC
From: Reg Edwards <G4fgq.Regp@btinternet.com>
Message-ID: <88986hmvp1@uranium.btinternet.com>
Source record: 85700
Cross-posted to:
alt.ham-radio.packet,aus.radio.amateur.digital,aus.radio.amateur.misc,rec.radio.amateur.equipment,sci.electronics.design

The input impedance of a short vertical antenna (less than 1/4 wave)
fed against ground is given approximately by a series resistive
component Rin and a series reactive component Xin. Xin is always
capacitative for a short antenna which can be tuned out with a base
loading coil of the same value reactance.

Logs are Naperian to base e.

Begin with -

Ro = 60*(Log(2*H / D) -1) ohms

where H = antenna height or length in metres,

D is antenna wire diameter in metres,

Xin = Ro / Tangent(Theta) ohms

where Theta is angular length of antenna -

Theta = 360 * H / Lambda degrees

where Lambda is free-space wavelength in metres

Rin = 36 * Square(Tangent(Theta / 2)) ohms.

To Rin should be added the loss resistances of the loading coil and
the loss resistance of the ground electrodes or radials or what have
you.

Programs HELICAL3, VERTLOAD, ENDFEED, DIPOLE1, TRAPDIP, available from
website below, do it all for you with performance, etc, calculations.
Download in a few seconds each. Not zipped up. Run immediately.

Source record: 85707
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.swap

Mike, the performance of the noise blanker depends greatly on the character of the noise. It works best on tall narrow spikes. Apparently on 40 meters the spikes are wider, or they are accompanied by other noises that the blanker can't handle.

It doesn't seem there is anything wrong with the noise blanker, just that your vehicle needs attention.

An idle opinion from an old timer who has been there, and who also runs a TS-440S mobile from time to time. But then I probably have a better designed car; I don't think too much of American made vehicles. That's another idle opinion, don't take it personally.

HAHAHA! Why should I complain, you've proven my point for me perfectly! All I ever said, and if you had ever really read my posts you would have seen it for yourself, was that there has been quite a bit of childishness and whining from both sides of this issue! It has been a constant flood of illogical statements, derogatory comments and down right foul language from every point of view. Non of this proves either side was right, just showed how immature some people are.
I have sat down many times with friends and strangers over coffee or a beer and had a great time discussing these issues with them. Very few times have we all agreed, but we had mature discussions and actually heard each others opinions and came away with a better understanding of the other side and respected them for it.
I have been in favor of reducing the cw requirements for some time now. Need I say it again, or can't you understand plain english? We are on the same side! I just felt that for the anti-code side to tell others to stop whining after a couple of decades of the same was hypocritical. I do understand the feelings of extras who have worked hard to get cw speeds up to pass the exams, only to see that work discarded. I still believe that cw's importance has lessened over the years and the exams should reflect that.
I will offer you this, if you are ever in the Rochester, NY area, I would like to meet you and discuss this over coffee or whatever, your choice, I'll buy, lets carry on a real dialogue and just have fun!

I have lost a step with age. I used to dunk it with two hands from a standing-still flat foot position. Now I need a running start and use only one hand. I've got extremely long arms, like my orangutan cousins. Put $600 of knee braces on me and I can still do it. After all, I only have to get the ball about one foot higher than just standing and holding it. And being able to palm the ball one-handed sure helps.

Hi all,

I'm looking into buying a dual band (2m/440) HT and haven't been active in ham radio for awhile so I don't know which company has a good reputation, solid products, and good reliability - in general at least. Specifically, I'm looking at the following radios:

ADI AT-600
Alinco DJV5T
ICOM IC-T7H
Yaesu FT-50RD

Any comments on those brands, or even the radios themselves if you have them would be most appreciative. I'm especially interested in the ADI AT-600 (Radio Shack HTX-204 ??) because it has dual-VFO's. Otherwise I can't really afford a radio with dual-VFO's, and I don't want to buy used at this point...

Thanks in advance for any emails or posts and 73!

Steve

correct, i neglected to say that 220mHz would be in the extended
receive range, a little deaf at that.
sorry 'bout that to the original poster

Here's a message I posted earlier in response to another question about
antennas. A random length of wire can be made to be resonant by adding
reactance in series with it. A short antenna usually requires an inductive
reactance known as a "loading coil".

You are working at 400 MHz and the original question was about 27 MHz,
but the principles are the same.

On Thu, 27 Jan 2000 14:29:14 -0000, "Mark Vernon" <mark@rdlab.freeserve.co.uk>
wrote:

>How do you calculate the inductance needed to resonate an antenna when the

>line with an inductance to make it resonate at the correct frequency but how
>do you calculate the value.
>
There are too many variables involved to make calculations that will be
of much use. The best way to proceed is empirically. Insert an inductor that
can be easily replaced in the antenna. Then use a simple field strength
measurement somewhere as far away from the antenna as you can get a reading.
Then adjust the value of the inductor up and down to maximize the feild strenght
reading.

Keep in mind that if you change the length of the wire part of the
antenna or its position relative to any other metal close to it, you will change
the required value of the added inductance.

The typical physical dimensions of a loading coil (inductor) for an antenna like yours is a coil of wire about a half an inch in diameter with 20 or so turns of 20 gage wire spaced out over a plastic support rod or tube with a length of an inch or two.

i have 4 antennae mounted on the bed rails of my 91 dodge dakota.

true, performance would be gained from a cab mounting but that
pro am 17m stick is a little tall =]

the other antennae are a 6m pro am, high gain cell, and a coat hanger
for 2m/70cm until i can afford a comet dualband to fit on the nmo mount.

not much banging around and get favorable results so far.

> clear where I stand on this and its not too far from your opinion.

It seems I shut out listening to you when you trotted out the old "crybaby" term. It is kind of funny because you may be MORE inclined to lower CW requirements than me.

Anyway, it seems that our argument has distilled down to be over the importance of Morse. Here too, I have stopped listening to arguments from the other side. There may BE some use for Morse - but the UNREASONABLE attitude in the past pissed off so many people that I can see why they acted unreasonable, and lowered the requirement to 5wpm. IT WAS PUNISHMENT. Now the other side is "crying". And it just feels SO GOOD to rub their own words in their face.

Maybe one day we can get back to talking to each other, instead of screaming at each other.

Oh, by the way, it seems you don't like me editing previous posts; well, my newsreader doesn't let me include too much old text in replies. I think it is an etiquette thing.

Get a 1/4-wave with a flexible stainless steel
whip - it'll bend when you go into the garage.
I've never had a problem. It'll probably work
better than a thru-glass mounted down lower as
well.

I received my Pegasus in Oct 99 and it has been used daily since. I have
had no problems with the rig and am very well satisfied. There are several
of them in use among the 3965 crowd in Alabama and I know of no one having
any serious complaints.
Pros Excellent transmit audio. They have the best audio of any rig
I've heard.
Filters. The dsp receive filters work very well and of
course built in...nothing extra to buy
The automatic notch filter really works to get
rid of "tuner uppers"
Software. Ten Tec has upgraded the software twice since I got
my Pegasus and Carl,
N4PY has a version out that I think is better
than Ten Tec's
Price Really, What new rig can you but with the same
features for $895?
Service. Ten Tec service is legendary, especially if your
used to getting an
IcomWoodeasu fixed.
Con Computer interface. If you're "in to" computers there's no
problem but if you're computer
illiterate then there is a learning curve to
master.
No built in tuner available. There again, it depends on your
setup. If you use resonant
antennas, no problem but if you routinely use
a tuner, it would be nice to have
the option of a built in one.

I still have a UHF Saber II High power Alpha readout 48 Channels. This radio has the keypad under the housing so it can be recased and have a keypad. This radio is programmed into the 440 ham band and GMRS frequencies. This is a great radio but I need a VHF radio. I would like another Saber II but I will take a GE MP-A (system model). But I would consider any radio that will program the VHF ham band and up to 162. It has to have 20 channels or better. The Saber comes with antenna, High capacity battery, pocket charger and belt clip so if You have anything you might want to trade let me know by e-Mail.

While you might get 'excellent' results at home, you really should
compair it to a goo d antenna. It might work ok for a repeater antenna,
but you will be much beter off with a
'comercial quality' antenna such as the 4 bay dipole arays. The takeoff
angle for the arx-2b is probably somewhat up in the air and if the
repeater is already up high, the signal will be mostly up in space.
Also you need to concider the construction of the antennas. They need
to withstand alot of wind and ice stress.

kf6foz wrote:

HI,
In AM mode, it is totally different story, as Gary mentioned it is not designed to run high power in AM due to the fact there is no margin in Tubes,power supply ventilation, etc. I would not feel comfortable if the output is more than 200W at maximum in AM mode.

If I could ask a dumb question, what's a 3rd order intercept point,
and what is its significance? It's a phrase I hear bandied about a
lot, but I can't seem to recall what it means.

Larsen, absolutely! And use the big square based mount, not the smaller round mount, the magnets are much more powerful. Keep the underside of the mount clean and don't do as I did and open the door with the coax stuck tightly in the window. The XYL screamed for a week after that one!

I left C.B. Radio a few years ago because of the people.I got into amateur radio 2 years ago and really enjoy it.But the more I read this the more I think maybe there's not that big of a difference. I know I'm going to take a lot of flak for this, but you need to grow up.

Maybe you should complain to the FCC? or the ARRL? or maybe your local
brownie scout(I'm sure she'll let you cry on her shoulder, if you buy a
box of cookies).

Maybe your right about the language, though. There might be some
brownie scouts on this newsgroup who are interested in ham radio.

Geoff, When you open the FT-757, with the dial facing you, on the display board, there is a small switch on the lower mid-section. This switch has been changed and switching in in reverse will correct the problem. Be very careful when you lift the cover because it is easy to break the inductors on the display board.
Please e-mail again if you need any other info.

WHAT are you driving it with? WHAT power?

The tubes don't have enough dissipation to run nearly as much output
on AM for extended periods as SSB, nor will the power supply last long
at the power levels you ALREADY have tried. It's a SSB, fairly LOW
duty cycle amp, NOT a rock crusher...

Hi Everyone,

I just bought a Kenwood TS-930 off of Ebay and everything seems to be fine except for the cooling fan. After a short time, when the rig heats up, it kicks on but makes a terrible whining noise. I seem to remember reading that the fans on these were a bit noisy but this one is pretty bad.

Does anyone know where I can get a replacement fan or have any ideas how to quiet this one down?

Please reply off-list to daved1@tir.com.

Thanks in advance!!

Dave Duncanson

Oh? You're turning in your license?

Your hard work learning high-speed code bought you a few more years of HF privs. My patience is buying me those privs, years after I would have had them if I had gotten my speed up when I first got my license. Seems to me we're about even, we made our choices and took our prizes.

: Then when all our hard work is thrown out the window, you wonder why
: people scream? Are you sure your thinking cap is on right?? Or are you
: so far removed from reality that it doesn't make sense?

Why was all your "hard work thrown out the window"? You still can copy
and send 20+ wpm on CW - I hope. Many extras cannot do that any more, as
many of them have seldom been on CW since they got their rating.

Just get on the CW segments and USE your ability to send and receive that
fast. If the people with a lower speed capability want to talk to you,
they will get their code speed up. If not, then you can gloat and brag
about being better than the other extras who cannot keep up.

Just don't try to communicate with some who can copy much faster than
you can - they just might make fun of you in return.

: Certainly some of the rhetoric on BOTH sides has been absurd, but
: the anti-code side has been just as whiney. That was my point.
: Then the thing that really makes me wonder about the intelligence of
: some members of our hobby, is if I make even a little stink about this,
: I'm made out to be some kind of arrogant exclusionist trying to keep
: everyone else from enjoying ham radio. NOT! I accomplished it, so can
: anyone else who puts in the effort. Now certainly the lowering of the cw
: requirement may have been timely, but 5 wpm? only time will tell.

I was in favor of 10 wpm myself. That is just about where one of the
common plateaus occurs.

: amateur radio 2 years ago and really enjoy it.But the more I read this
: the more I think maybe there's not that big of a difference. I know I'm
: going to take a lot of flak for this, but you need to grow up.

There isn't a lot of difference. There are whiners/moaners in both groups - just as there are those that enjoy either or both of the hobbies to the fullest extent possible.

In general, there is less jamming etc on the Ham bands, but that is because the Hams tend to police their frequencies better - and the FCC has been a BIT more responsive in shutting down the troublemakers.

It is always going to be impossible to satisfy everyone. We must also keep in mind that technology has changed drastically in the last 50 years or so. Hams no longer build the transmitter/receiver that they use frequently. Most equipment is purchased, as the receivers have just become too complicated to design and build yourself - if you want all the capabilities that exist in modern rigs. It also saves you little or no money over just buying the commercial gear - which was one of the reasons to build your own gear in the first place.

when you paying such big bucks for a radio you would expect to have a decent receiver. When a ham manufacturer delivers a receiver with a +30dbm 3rd order intercep point i will be the first to buy it. Untill then this is just another mickey mouse radio with mickey mouse features. It seems ham radio equipment designers have forgotten the word RF DESIGN. We dont seem to be going forward in real terms, just stuck on a mediocre platform of boxes for the sake of boxes. I just picked up the 2000 handbook, and in there were circuits for mixers with better than +35dbm third order intercept. I wonder why manufacturers are not up to this standard considering they want us to fund their RD and budgets.

4677. WANTED:::Old Synthesizers & Used Gear:::::

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-14 00:00:00 UTC
From: myrolandman1@my-deja.com
Message-ID: <8893h2ifc1@nnrp1.deja.com>
Source record: 85771
Cross-posted to: rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.swap,alt.music-lover.audiophile.hardware

Hi folks. I am an electronic musician searching for some old electronic music making equipment, in any condition, BROKEN OK.

Synthesizers, keyboards, drum machines, tone modules, effects racks or pedals, vocoders, sequencers and especially old modular, patchable or analog synths (modules or complete systems).

Also looking for old literature on this equipment, particularly all Keyboard Magazines pre 1988.

Will consider anything by the following manufacturers:

MOOG, ARP, Roland, Korg, Oberheim, Sequential Circuits, Electrocomp EML, EMS Synthi, VCS3, Buchla, Serge, Paia, Steiner-Parker, Octave-Plateau, Wavemakers, Aries, Digisound, Synton, Yamaha CS and OTHERS.

Please email me privately if you have or know the whereabouts of something I might be interested in. Please be sure to include price, condition and location. Thanks for your time and Happy Valentine's Day!

Examples of items I am looking for:
Roland MC-202 Microcomposer
Moog 16 Channel Vocorder
Roland Jupiter 8
Roland TR-808 Rhythm Composer
Graphic Equalizer GE-810 and GE-820
Stereo Phaser PH-830
Lots of other stuff...

I'm not sure how different this amp is from the FL2000B, but max carrier power out (CW) for me runs around 500-600 watts on all (non-WARC) bands below 10m, and around 400 or so watts on 10m. I'm currently using a pair of Svetlana 572B's with the bias mod in place. It wasn't that much different on the low bands with the original 20 year old Cetrons... This is with around 100 watts of drive and 500ma of plate current (roughly 1200 watts input). This is when the amp is set up for 220V power. I think the power output is reduced if 110v is used.

Anybody have any info on how the TS-50 sends band/frequency info to the AT-50, and how the At-50 tells the TS-50 that it is tuned up?

Does the Service Manual explain the nature of this interface?

I would like to build my own automatic antenna tuner which uses the AT-50 interface connector on the back of the TS-50. Any info would be appreciated.

Cross-posted to:
alt.ham-radio.packet,aus.radio.amateur.digital,aus.radio.amateur.misc,rec.radio.amateur.equipment,sci.electronics.design

Does anyone have a formula for estimating the impedance of a straight wire antenna when it is less than 1/4 wavelength.

I am constructing a 400Mhz transmitter and have very limited space.

Also, if anyone has design info for any other types of antenna which would be reasonably efficient in small size (30mm square).

Please email me if you can help at

huisman@ihug.com.au

Joe, this is sad and in very poor taste. Is this really what you want to do with your life?

I'll courtesy copy this reply to the Dayton Hamvention points of contact as well as many, many other hamfest points of contact on the ARRL website. I only ask that they discourage this sort of behavior and obnoxious display at their events. I'm sure that I can find better use for my time and -money- than to attend an event where I am openly offended by my peers. I wonder if I am alone in thinking this?

Please reconsider your offer.

Dunno about a formula, but Kraus ("Antennas") has an impedance spiral
for whips.

>Also, if anyone has design info for any other types of antenna which would
>be reasonably efficient in small size (30mm square).

Thats about one-sixth of a quarter-wave if my mental maths are any
use. Better look at multi-turn loops etc, but the radiation
resistance of ANY "real short" antenna is low and therefore energy
transfer efficiency is difficult. Can't you use some external (e.g.
power) leads or something as part of an ant system? Or does the whole
thing live in a matchbox?

Have a look at Edwards' site for his helical modelling prog - will at
least give you a feel for efficiency for a short helical approach.

The Comet and Diamond foldovers might be a good solution. The performance is excellent. I stopped using them because they don't have a means to mount a shock spring.

BTW: The instructions that came with the Diamond (SG7500, I think) had my favorite bit of Japanese to English translation ever. In regards to safety while operating the fold-over mechanisim: "Be Careful not to be but your finger!"

I just recently picked up a Yeasu FT-2200 radio. Unfortunately there was no manual or other documentation with the radio. The problem I'm having at the moment is I cannot workout the steps required to store frequency's into memory. I believe the radio has 53 memory channels, however, I have been unable to access them. Any advice you could offer would be greatly appreciated as I just received my amateur licence and I'm eager to get this radio working properly.

Regards Colin.

4694. Problem with noise blanker on TS-440S

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-14 00:00:00 UTC
From: Mike <ki5mp@DOTDOT.arrl.net>
Message-ID: <dpTp4.5501$39.239549@news.corecomm.net>
Source record: 85788
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.swap

Greetings everyone.

I have an intermittent problem with the noise blanker on my Kenwood TS-440 and was wondering if anyone could shed some light on it for me.

I have a Chevy AstroVan with lots of ignition noise (comes in through the antenna). I'm running a Hustler antenna with three resonators - 80M, 40M, and 10M. I haven't spent a lot of time really getting to the root of the problem by eliminating the source because the noise blanker on the TS-440 has been working quite well - until recently that is. On 40 meters the noise blanker works sometimes and sometimes it doesn't. The s-meter reading on the noise level on 40M is an S-9. Depressing the noise blanker button sometime wipes the noise completely out and sometimes it doesn't do a darn thing - making weak stations completely unreadable. On 80M, the noise level is a S-7 and the noise blanker consistently does a good job of cutting it out. On 10M, the noise level is about a S-4 and the noise blanker also consistently does a good job of cutting it out. The intermittent problem only appears on 40M.

Does anyone have an idea what may be going on?

Thanks in advance for any help.

4697. Re: Ham newbie

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-14 00:00:00 UTC
From: Larry Menzel <lmenzel@millcomm.com>
Message-ID: <PFTp4.1038$Pd1.82414@news7.onvoy.net>
Source record: 85791

Mark,

Just a quick note, that the stuff that previous post said was all correct and very helpful. A couple more things.

1. Look around in your town for other hams...usually not too hard to find their homes, as they usually have a tower with antennae on it.

2. Check with ARRL, like he said. They have many helpful books and tapes to learn about ham radio.

3. The link that he gave to Amateur Electronic Supply was incorrect. The correct one is:
www.aesham.com
Poke around in there and you'll be amazed at the stuff they have. You may want to look at the following as well:
www.yaesu.com
www.icomusa.com

Also check out: www.dxer.org, www.qth.com, www.qrz.com.

Good luck

Larry, N0XB

Mark,

I was looking at a similar installation on my BMW R80RT a few years ago and never really completed it. I was intending to use a 2m HT (at the time I had a Tandy) and found a place on the internet that sold a throat style mic (like the WW2 pilots used) that was compatible with the radio. Headphones for the helmet were no real problem (entire mic/headphone sets are available in most motorcycle mags) and wiring a PTT for the left handlebar grip seemed easy enough. As for waterproof, do you really want to be screwing around with a radio while riding in the rain? Put it in the fairing pocket in the rain. I was planning on putting my HT on the top of the tank bag I always carried, and slipping it inside in case of rain.

Hope this was a bit of help,

N2RHV

radio shack at one time sold a vox/ptt headset mic for ht's
i removed the headband part and 'slid' the flexi mic shaft thru the ear
cup
and down to the front of my full face helmet. a little velcro to keep
the
speaker in check and i was off. a hershey kiss mag mount antennae and
an
ht in the tank bag. worked well.

I've got an Icom T8A, and personally I think the audio is quite good. Even for occasional music listening on the FM broadcast band, it does a decent job. My only complaint about this radio - and it's a big complaint - is that its batteries don't last very long. A couple hours and they die, usually in mid-sentence.

I'm considering selling the T8A and getting a VX-5R. The small size is important to me (for skiing, hiking etc) and its lithium batteries are quite high capacity compared to the Icom's NiMH.

Bob, KI8AB

James, I find it fascinating how many tech plus licensees like yourself contend that they have credibility arguing against my contention that there is a loss of privelege as a result of amateur restructuring. Tech + lack the experience operating several HF amaterur bands beyond ten meters, hence I am not convinced that the arguments are even worthy of
debate since they lack supporting experience, knowledge and facts.

With that said, you do bring up an excellent point which further supports the argument that priveleges have been lost for 13WPM and 20WPM licensees with the new restructuring. All general advanced and extra class licensees could be effected by the FCC restructuring that has been passed. Not just extras.

As a radio amateur who has been on the other side of pileups, operating with reciprocal licenses in foreign countries, the amateur restructuring proposal may hurt one's ability to maintain similar operating priveleges (reciprocity) when overseas. I realize this impacts less than one tenth of one percent of the amateur population, but, since I'm in that group, I contend it is a loss of priveleges.

For example:

In several Asia countries where I have operated with reciprocal permit, the 1st class license allows one to operate all HF bands with a power output of 1KW. The 1st class license used to be "reciprocal" to the amateur extra exam. The 1st class license carries a morse speed requirement of 18 WPM.

The second class license carries similar frequency priveleges but output power is limited to 50 watts. The 2nd class license carries similar technical elements but a morse exam of 10 WPM. Reciprocity was granted for those holding a general class or advanced class license

The third class license carries restricted HF priveleges (ie, no 20M) with similar technical elements but a morse exam of 5 WPM. Reciprocity was granted to those holding a Novice or Tech-with-code (old Tech) license.

I contend that until the IARU votes on this stuff, The "extra lite and general lite" exams potentially mean that when we go overseas, we will no longer
be able to obtain equivalent "1st class" operator priveleges. If this is to
be the case, then we lose the ability to use 1KW, to use 20M, etc,

despite us
being a holders of the "old" general, advance, and extra class tickets
which
formerly were offered full and equal reciprocity to "local" license
classes.

Just some food for thought. Anyone else concerned that the once
premier operating permits are now 2nd or 3rd class licenses in many
places?
As a DX'er, I sure am! Wouldn't that suck....go to P51 for the
dxpedition of a
lifetime only to find out upon arrival that the dumbing down of the
license structure suddenly limits the team to 200 kilocycles on ten
meters! Doh!

Joe K7JOE
ex: 7J1AOF, BV/N0IAT, YU3/N0IAT, K7JOE/DU1, V63TT, etc...

And...for those that are a little slower than most, My T-Shirt offer holds,
but the post was intended primarily to foster discussion
since the newsgroups were getting a bit boring and the action on the 6M repeater has been dead all week. You have livened up my evenings with an inbox full of healthy debate and a few T-shirt orders to boot. Your results are impressive.
There are some very good, and some very poor debaters out here.

120 total comments in the past week.

35% support the contention that the FCC erred when it dumbed down ham radio.
Almost all (96%) were higher class license holders (general, advanced, and extras) as indicated by a name and/or callsign match to the various callsign databases.

65% were against the contention....vast majority (92%) tech or tech plusses.

5% of total comments were one liners like "eat shit" or "FOAD", which were
taken as part of the 65% figure.

One comment even made me fall off of my chair I was laughing so hard...it was the one about "I'm with stupid" or something like that. It was well done. Kudos to those whose power of pen is stupendous.

And the lowlight: Sad to say that I received a death threat from a fellow ham from this discussion. He's out of 5-land (Texas). Get this...the guy signed his name and call-sign to his email. It has been handed over to his ISP and the FBI for investigation.

Finally, in closing, my article on amateur restructuring is now statistically
based and ready for press. (albiet not the most scientific method around).

and now you know.....the REST of the story. Good day.

Looking for a mid-60's call book that might have my old novice callsign
listed. Call sign is WN6OMD. If anyone has an old call book from 1965-66,
I'd appreciate hearing from you.
Thanks,
Chuck

Jose:
A nice idea! I also seem to remember that someone did offer an external keypad for the 440/5000 several years ago but I could be wrong. That device required the IC-10 interface chips be installed so it probably plugged into the computer interface port.

(yes! I found the reference to it in the RDS White paper on the R-5000: Stone Mountain Engineering. It was $107 but they may not be around anymore)

I would be interested in your design, although my current keypad is still working OK.
Brian Denley

When I joined the state credit union years ago.. you had to be employed by a state agency to become a member, I met the qualifications at the time, no comlpaints.

Two years ago.. the credit union decided to open its doors to everyone. Lo and Behold! there were tons of people joining.

Should I complain that these people didn't have to "qualify" the same way I did?

Maybe these people aren't as smart as me...

Maybe their money is different from mine...

Maybe this is all a big WASTE OF MY TIME!

I have a dual band Comet antenna such as you describe. Folds over nicely at about 65 MPH. Replaced it with a 17" high non-folding dual band antenna. Size of a 2m 1/4 wave but with a cellular looking loop in the middle and no problem clearing the garage door. The Comet had to be folded to fit without hitting. Have always kept the Comet in the trunk just in case I decided to tape or solder the folding joint in order to have a bit of gain.

Will be drilling a hole in the top of my new car in the next couple of weeks. Its not all that long before the Dayton Hamvention so I've got to start getting ready.

Good Greif.

This whole babble on restructing is still going on? I guess there are those that will never accept change. Good or bad it is here and it is here to stay.

One more comment. If the reactions about this are bad just wait for about ten more years. Sometime in 2001 or later the ITU will take up the issue of removing the code requirement period. Boy will that start a cry that will make this look like a whimper. Get ready it willl happen.

regards
james

And for those that seem to think that the extra class license has been cheapened, I pose this.

The ITU has never placed a minimum speed requirement or a maximum speed requirement on code. The treaty has only stated that code is a requirement for operation in the amatuer bands operating below 30 MHz. What is an acceptable level has been for most part a determination of the resisdent countries signees of the treaty. The US implemented requirements for incentive based licensing. It known that in the last 20 years the incentive to become an extra class license has deminished. The priviledges gained have not been significant to warrant the effort. In an incentive based licensing system if no one is willing to reach the top level then maybe the carrot is unobtainable or the rewards for obtaining the carrot are not sufficient.

In my opinion the rewards for obtaing the carrot no longer seem reasonable. With that the extra class portions of the bands have in most part been the least used of the spectrum below 30 MHz. The extra class licensee of the past have enjoyed less crowded segments and are quite happy of that. Most of the arguements about restructing have only centered arround the main fact that the extra class segment now will become more crowded and this really pisses many off. They feel cheated and that the license class they so proudly hold have been cheapened. This, from their perspective, is true. It seems that work like Joe is doing is to distinguish between older extra class and newer extra class. It appears to me that this is some move to segrate those before and those after. To me this in its own right smacks of prejudice. These people that want to distinguish between pre 4/15/2000 extra class licnesees from those who accomplish the feat after, are in fact very poor examples of what members of amatuer radio should be. This attitude is deplorable and should not be allowed in amatuer radio. If this new restructuring is so offensive, may I suggest that you not renew your license when the time comes. I think the amatuer community will be better off without the like of those that will hold prejudices against the new extra class licneses that will follow after 4/15/2000.

4730. Re: 1000MP Poor Performance

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-15 00:00:00 UTC
From: wb <willyacht@yahoo.com>
Message-ID: <Ep2q4.25982$3b6.114282@ozemail.com.au>
Source record: 85649

This is not surprising, if you read the ARRL reviews you did not have to be a genius to work out that the receiver is all that crash hot. You get all the best this and the best that on reflectors here and there, but nobody publishers the figures. It is a receiver of mediocre performance, that is noisy. Your old FT102 had third order intercept of +15dbm much better that your FT1000MP, it also had a very clean transmitter -3rd order imd of -40db. The receiver noise floor i cant remember the figure was also quite low. If you have followed ham radio desingn progress you will realise we stuck in rut. These manufacturers dont want to give us high performance radios because they get away with selling crap with such huge profits. If you want to see what a real hi performace state of the art radio looks like , have a peak at the Rhode & Schwarz site, the EK2000 series. A receiver with a third order intercept of +40dbm. We have had receivers that were made in the late seventies that had +30 dbm third order intercept points, they can be bought for 800 bucks. Combine a receiver like that with your FT102 and you will be alright maybe for ten years the way most ham radios are designed. That is of coarse if you talking facts and figures, not subjective mouthing off and reviews in CQ magazine.

Message-ID: <A23q4.9282$_p1.852438@news1.rdc1.md.home.com>
Source record: 85650

I have a motorola HT-90 Handheld that I just recrystaled. I need the instructions for tuning the radio. I got a manual from motorola, but it turned out to be the Theory/Maintenance Manual, and does not have the instructions for tuning.
What I really need, is the Motorola Part # 68P81022C80 UHF Service manual. If someone would photocopy it, or scan it for me, I would pay for the copying expenses.

Any help would be appreciated.

4732. AEA Morsematic keyer problem

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-15 00:00:00 UTC
From: k3bu@aol.com
Message-ID: <20000214221221.25064.00001384@ng-cp1.aol.com>
Source record: 85651

I bought AEA Morsematic keyer advertised as good, but it has a problem. When turned on, the keyer works at the default speed. When trying to enter some control codes, it appears to switch to hig speed code and nothing else works. Looking at the schematic, there are two what appears 40 pin microprocessor chips. They are marked Motorola and AEA (3870-1, 3870-2 in the schematic). Looks like custom programmed micro chips? Anybody familiar with it or possible help?
Thanks!

Yuri, K3BU

While the 'big three' do make some good models (and some that aren't so good) you might want to take a look at the ADI AT-600. It doesn't have quite all the bells and whistles of some of the others but of the four units I tested (Icom W32, Kenwood TH-79A, Yaesu FT-50 and the AT-600) the '600 had by far the least trouble with intermod. Unfortunately all the manufacturers have a common problem in my opinion - the radios are far too small to contain a speaker of any decent size. None of the more recent HTs can be heard in an environment with even a small amount of ambient noise. I keep an Icom IC-32 (older model with a larger form factor) for those situations when I need plenty of audio.

In any case that's my $0.02. Good luck with your search!

4734. Re: ADI AT-600 Feedback Needed !!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-15 00:00:00 UTC
From: Brian Esche <none@worldnet.att.net>
Message-ID: <_F3q4.10676$UP1.248305@bgtnsc05-news.ops.worldnet.att.net>
Source record: 85653

Steve, I own an AT-600 and I truly believe that you won't find a better HT for the money. Although you can get more features with some other models the AT-600 is a solid performing radio with low intermod susceptibility (a big plus in my estimation). I've seen them priced at around $200 and that's a great price for a radio of this caliber. As I've mentioned in other posts on this topic my only complaint is that the speaker is too small to be practical. However, virtually every other amateur HT manufactured today shares that problem.

If you do buy one, here's a hint: The radio is compatible with Standard CNB-152 and CNB-153 batteries (although they are not an exact match cosmetically) which can be purchased for reasonable prices from aftermarket manufacturers (W&W, Maha, etc.). The 'official' ADI batteries are a bit pricey.

Good luck!

OK, after a few days of researching the issues, I thought I'd ask for advice here. The Subject line sums up the topic of my quest: I am looking for a mobile rig with three constraints:

1) I would like DTMF paging. At least, I believe that this is the correct term: I would like to be able to program the radio so that it opens the squelch only when it receives a sequence of predefined DTMF tones.

[In case someone is interested in why: my wife just got her ticket and she is less interested in listening to repeater chatter than I am. With DTMF paging, she can tune out everbody until I open her squelch.]

I am aware of CTCSS and DCS paging. However, CTSS is frequently used for repeater access so not available for individual squelch control. DCS isn't but if I need CTCSS for repeater access I can't use DCS.

2) Detachable front plate. It would be _so_ much easier to install in my Subaru than a one-piece rig.

3) Affordable. Something like $200.- for a decent 2m rig would be nice. Let's say, $300.- for a dual bander.

It seems that I can fulfill two of these constraints but I haven't found any radio for all three. For instance, there are great 2m radios at about $200.- which fulfill conditions 1 and 3 (e.g. ICOM 2100,Yaesu FT2600). However, no detachable front plate.

Actually, I couldn't find ANY pure 2m rig with detachable front plate, only 2m/440. Of course, there is nothing wrong with a dual bander and I would be ready to pay a bit extra for it. For instance, the ICOM 207 has a detachable front plate and is just within the budget (300.-). It looks like a great radio but no DTMF paging, if I understand the QST review correctly. So, this one fulfills 2 and 3 but not 1.

Of course, it is easy to find radios that fulfill 1 and 2 (detachable front and DTMF paging) but not 3 -- in other words, if you pay enough money you get any feature you want. The cheapest I could find is the Yaesu 90R but it costs already 400.-, that is, twice as much as the other rigs (eg. FT2600,IC2100) that do essentially everything I need.

Or am I misunderstanding something? I can't believe that this DTMF paging is such an exclusive feature. Not only does my FT50 have it, it's even in the HTX-202 that I bought for a hundred bucks at Radio Shack

when they were discontinuing them. So, is this perhaps such a basic function that ALL the rigs I am looking at have it and they don't even mention it any more in reviews and catalogs?

Sorry this got so long. If you are still with me, and if you have either a suggestion for a radio, or a clarification to my last question, I would appreciate if you could post it or drop me a line. THanks!

I have been out of radio for a number of years and unfortuneately I had sold all my wonderful equipment. However, recently I've gotten the bug. I was wondering if anyone can tell me how the 10-meter band is performing at this time...are conditions good?

Thanks
KE4PJB

I recently got back on HF after a long hiatus. I just put up a homebrew
5/8 vertical and worked France, Netherlands, Germany, Japan, Aus, NZ, &
all over stateside & Canada with 100W from Utah.

Hello Dave,

Try to use the muffin fans being available around for the Pentium
processors. Or take a look in the Radio schack catalogue.
I am sure you will find the close replacement.

Good luck and best regards,

4751. Problem on my JST-145

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-15 00:00:00 UTC
From: Dongho Lee <ds1lvx@thrunet.com>
Message-ID: <gHc4RO7d$GA.284@news.thrunet.com>
Source record: 85670

I own JST-145 from JRC. It worked OK till last week.
I has a problem of unstable SWR in 15m band only. When I try to transmit the signal, I usually use FM mode to check SWR of my equipment. The meter was indicated at right range of SWR and suddenly moved to high value. Sometime it went to high and sometime it stayed at low value. When I changed to other bands, they were all OK. I use R-7000 antenna and dipole with manual tuner. The above phenomenon was happened when R-7000 was connected. If I connect dipole with manual tuner, I could adjust tuner to get
low SWR.

Only 15m band has problem.

Is that a simple problem to fix it ?

Help me !!

- Dongho.

At least from up here in the Washington State, things are pretty good. I have a minimal station- a TS520 that makes about 50-75 watts on 10- and a dipole at about 8 ft. and I get lots of QSOs. I contacted a fellow in Alaska this last weekend who was putting out 5 watts to a home-made Yagi beam. I also contacted Hawaii and regularly make contacts all over the Midwest.

You will need to have daytime for hamming because 10 is only open during the daytime. When the solar flux is between 150 and 190 as is goes now, 10 usually has some nice openings

If you want to dip a toe in, Radio Shack has a ten meter radio for about $180 and that, plus a dipole and some sort of power source will get you on the air. Used rigs will cost you more. I got lucky and found my TS520 for a total of $250 with new finals and a shop tuneup. YMMV.

Does anyone have an older two meter rig around
that still needs crystals?

I likely can help. I literally have 100s of both transmit
and receive 2 meter xtals. Most are in the 146 and 147
MHz band segments, with very few in the 145 MHz
segment.

These are all the small HC-25 xtals, like were used in
most of the solid state 2 meter mobiles and HTs.

If you need some, please e-mail the operating frequency
you need. I have them listed by operating frequency and
rig, and not by actual xtal frequency. Send the frequencies
you need (transmit or receive), and the rig that you have,
and I'll see if I can help.

Thanks.

The solar numbers are still going up, and 10 is definitely getting
better and better. DX is pretty easy, and I understand that when the
solar index averages over 200, night-time communication will open on 10,
as well.
It's a good time to get back in.

Hello!

I got a Kenwood TS-440S some days ago. I am still facing one trouble in receiving (low sensitivity in 10 meters) but the rig, apart of this, seems to work really fine... EXCEPT for the keypad. Doing some research in the Newsgroups and also by comments got from Kenwood List members (kenwood at qth.net), it seems a very common fault.

Well, I have a way to build a new keypad PCB, with better switches (real ones!). This PCB would be 'plug & play', but you would need to remove old
PCB and put this one. I have done a similar work (dismantling the original
keypad and puting it back) and it is not hard to do. As I would need to spend some money with the PCB manufacture, stocking low profile switches,
connectors and so on... I need to know if there is interest in this project. Please, _real_ interest. Price for each PCB would depend on the quantity made, but I calculate it around US $50-60. BTW, with the switches
I would use, it would last forever.

So here is the idea... comments welcomed!

Best regards,

JOSE

Brian,

Just remember, it's not illegal (yet!) to be an ass... If someone
chooses to act this way, fine.

Please excuse the language in the following, but it DOES make
a difference to how this is presented.

A friend (an extra I think... You know, it doesn't matter. I don't
believe his license class EVER came up in discussion, and I
never checked!) explained to me to 'calm down' once. He
told me there are allways assholes. And that these kinds of
people attract other assholes. You have to think of them as
'asshole magnets'. Only here likes attract, not repel. And if you
let yourself be attracted to them, even to disagree, you're just
another asshole.

Mike

4765. FA: ### MOTOROLA SABER I - VHF w/ACCESSORIES

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-15 00:00:00 UTC
From: pdfdisp@aol.com
Message-ID: <20000215094253.01211.00002114@ng-ch1.aol.com>
Source record: 85684

For Sale: Motorola Saber I VHF Radio w/accessories

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=260444596

Factory ID - H43SAN7139AN

Radio Specs:
12 channels
6 watt output
146-174Mhz
CTCSS/DCS/PL/MDC600/MDC1200 capable
Radio comes programmed to your specs

Radio Comes With:
Antenna & Radio programming terminal protector
Two (2) New High Capacity Batteries
Remote Speaker/Mic w/earphone jack - NMN6166C
Motorola Rapid Charger & Conditioner - NTN4734A
Motorola Leather Swivel Holster/Case w/strap
RIB Programming Cable (not shown)
Saber RSS Programming Software (not shown - you must have the necessary licenses to use it)

This unit is in excellent shape (10 out of 10 cosmetically) and is guaranteed to be in 100% working condition. All included accessories are genuine Motorola parts (except RIB cable) and in excellent condition. Selling because it is not needed anymore. I've been told that this package is worth over $1500! Reserve price is VERY reasonable. If there is not enough interest in this as a package, I will resell the items individually. Please email with any questions. Good luck, and thanks for looking!

ITEM IS UP FOR AUCTION AT:

Source record: 85692

Have you bothered to put this into a search engine?? Things like the
following come up.

Kenwood R-1000

The Kenwood R-1000, an early consumer grade digital readout receiver, was
first produced in the early 80's. In its day, it was one of the best
receivers available. Sensitivity on the medium and long wave frequencies is
outstanding. Selectivity is adequate (I must add that my R-1000 was modified
by Radio West. The stock wide filter was replaced with a 4 kHz ceramic
filter, and a switchable 1.9 kHz Collins Mechanical Filter was added to the
narrow position). The selectivity of the R-1000 can be improved by
depressing the wide and narrow filter buttons simultaneously, with little
degeneration in audio quality. The R-1000 has a noise blanker which is
highly effective in an urban environment, but is not variable. At times, it
can be overloaded by strong signals, and has been noted to produce spurious
signals in high RF areas. As a result, in some instances, the noise blanker
may have to be switched off. The R-1000 does not have a notch filter, which
may limit its use around computers and TV sets. As a budget DX receiver it
is an excellent choice. Except for the lack of a notch filter and passband
tuning, the R-1000 compares favorably to today's good consumer grade DX
receivers. In minimal interference areas, the R-1000 can hear everything the
R-5000 or NRD-535Db can hear. Only when there is strong adjacent channel
interference or hetrodynes will the newer receivers out perform it. R-1000's
can be obtained for $200 or less. They are frequently listed for sale on the
shortwave newsgroup.

4774. Yaesu FT2400H Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-15 00:00:00 UTC
From: MuleBreath <noname@noname.com>
Message-ID: <88c13u$8tl$1@nrchh45.us.nortel.com>
Source record: 85693

I am having a problem with a Yaesu FT2400H 2m rig. I am not able to get any audio when I key up. I am able to bring up a repeater, so I assume I am getting power out, but I am not modulating. I have replaced the mic element in the microphone, but that did not cure the problem. I am getting power to the mic, the other functions on the mic work.....up/down freq, etc.

A search of dejanews found a post back in June 1999 that described the same exact problem.....I found no answers to this query though.

I don't want to send this unit back to Yaesu. I could get a new rig for the price to fix this one. Any thoughts?

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal
fundamental frequency. Merely supply International with
the exact receiver model number, printed on the rear label,
and the frequency you want to monitor. They will perform
the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second
local oscillator crystal is 11.155 MHz regardless of band.
On VHF high band (148 - 175 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700
series, one for each local oscillator. The crystal
formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the
first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X
SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel

Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications
Corp. sells used Plectron receivers, in working condition,
for $75-100. If you require crystals or reeds, TCS may be
able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.

If you wish to purchase a new receiver with "Plectron-like"
signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

Al,

Big mistake returning the rig... who needs an s-meter? I talked to Belgium, North africa, South America and a few others without really trying on a Hustler mag mount stuck on the Explorer while driving around town :) The rig has gotten nothing but good reports. And I got a pleasant surprise!

Raleigh KA8OZO

4780. Re: Opinions on Yaesu FT-8100R

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-16 00:00:00 UTC
From: Robert Lyons <boblyons@umich.edu>
Message-ID: <38AAABC7.CFF491EF@umich.edu>
Source record: 85547

Thanks for all the opinions, folks -

Consensus/summary for the '8100:
Good intermod resistance (consistent with the QST review)
High priced (consistent with my impression :P)
Be careful with the front end - overloads blow it.
Possible to damage the volume/bandswitch controls
Good scanning features
If ya don't need cross-band repeat and/or wide-band receive,
consider a cheaper rig.

All sounds like good advice. I do like the wide receive (entertainment
on long car drives) and the cross-band repeat (boost for the 0.5W HT's
we use on ski trips). The price is a big problem, especially if I get
any extras (separation kit, CTCSS decoder).

Thanks for the input, all.

Greetings,
I have a friend who is looking to buy a SMALL UHF or DUAL BAND HT. I noticed that the AT-400HP isn't too tiny and not to big and would do the trick. He is also looking for the unit to RX in the 464.000MHZ range. If anyone has this unit for sale or knows another unit that would do the function and is going to sell it please let me know. The other reason he likes this unit is because its very low priced according to AES.

Please let me know what you people have...

Thanks

Well, I am a proud owner of a 1000MP Hiss box . Whats with this radio. The audio power amp has hiss a low volumes . The receiver is noise floor is terrible without the DSP. and the DSP is nothing to right home about. I get a headache listening to this radio . But where's the noise coming from . I have went over the receiver circuits and there the same stuff yaesu has used for the last 15 years. FET in the mixers and front end, everyday components. Maybe the switching power supply noise is getting in the receiver. Anyone out there done some serious testing??

Filter, filter, filter.
Use two fat wires directly to the Batt + and - for power. Add a large
choke, 50+amp diode, and large cap in the + lead. Ground leads on the cap to
the - wire. Use a filter in the antenna input. Move the antenna as far
away from noise sources as you can (engine and on board computers). Good
luck! KC7LTV

Dear om
if you can help me I`ll be happy :)

I have a Transceiver (Kenwood TS-140S)
But it is not work now

SYMPTOMS :

First time : good receive but audible alarm " UNLOCK "
with morse code time to time .

Now : - open display firs time (forexample 14.000.00)
- after opened display (like . . . . .)
- not receive also not any sound or hiss
- not transmit
- alarm " UNLOCK " with morse code repeatly .
- when I rotate Tuning knob display is open
like 14.230.00 but again . . . . . .after 1 second.

I measured 3.2V on back-up lithium battery .

When I was living in the USA, I saw demonstrated a replacement E-PROM for the TS440 that took out the key pad bounce through different timings. At the time mine was OK, but it is now begining to show signs of the same problem. I can't remember who showed me the replacment E-PROM, and I've spent several hours trying to track down reference to it on the web with no luck. It may be easier and cheaper to track down a programmed E-PROM with different timing parameters.

I think you will find the low sensitivity on 10M is due to leaky diaode in one of the band pass filters. Have a look at the official Kenwood USA web site.

Help and info needed on Yaesu FT-757 / FT-990 problems.
After having bought two brand new Yaesu radio's in the
past ten years I've had the same identical problems with the
optical tuning encoders. Both radio's tuning knobs have seized
up and had to be replaced by Yaesu at my cost. I'm not very
happy about this. I spent hard earned money for these radio's
and to have the same trouble really upsets me. Has anyone
else had the same problem? I was told by an Yaesu rep that
this is a very rare problem. Any remarks pro/con would be
helpful.
thanks,
Bill

This is a logical extension of the TS790A. Here in the States, we can only get the 1.2 GHz module, but there is a 2304 module available in Japan.

There is also a TM541 (1296 FM) and 641 (2304 FM) available in Asia!

I suppose we can dream...

In general, when you need something like that, the factory isn't interested in talking to you. Call a distributor, like Allied or Newark and ask them for what you want. Maybe they can't help but they will talk to the factory, and probably get more action than you can. Or a representative of the company that made the equipment, although it's probably too old for that.

4813. Re: HV supply from oven parts?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-16 00:00:00 UTC
From: Louis Bybee <louisb@datacomm.com>
Message-ID: <38AB8472.3049BE24@datacomm.com>
Source record: 85580

Im am not experienced in HV supplies as relating to Ham applications,
but if you have a transformer with the correct current capabilities,
reducing the voltage to a usable level isn't much of a problem.

A low voltage transformer such as one with a 12, or 24 volt secondary
connected in a buck configuration, would reduce the primary voltage fed
to the HV transformer by the rated voltage of the secondary of the low
voltage transformer, and the secondary voltage of the HV transformer by
the secondary voltage of the low voltage transformer times the turns
ratio of the HV transformer.

For example; 120v in & 3000v out = an approx. turns ratio of 25.

120v -24v in = 96v. 96v x 25 = 2,400v

As SWL receivers go, its pretty good, but it suffers in comparision to modern Ham receivers(ie no DSP, no Passband tuning, no automatic interecept, no FM, no squelch, no RF gain, no memories). The analog tuning is pretty fast (makes it somewhat difficult to tune SSB), with digital freq counter type of readout.
It tunes in 1MHz segements; its easy to QSY.

The 12 Khz wide AM filter is great for listening to Broadcast band or SWL music broadcasts. The 6Khz filter is good for voice AM/SWL broadcasts. The 2.8KHz filter is ok for SSB, but is a bit wide for CW. It has a true "product detector" for SSB/CW, and excellent audio with a big built-in speaker. It has a built in clock/alarm clock. I have used it as a "bedside" receiver to wake me up.

Its a great IF for a VHF converter. I've owned one for more than 10years, and keep it around for miscellaneous uses. I would have given a lot to have one when I was a novice, but wouldn't be satisfied with it if it was my only receiver for Ham use. For casual SWLing, its great...

I found out a little more. I called Kenwood Customer Service, and they looked in the TS-50 service manual, which says nothing about the Antenna Tuner. Then the guy looked in the AT-50 service manual, and said that there is only one paragraph about the interface: Namely that it is a serial interface (?RS232), with one start bit, 8 data bits, 2 stop bits, running at 4800 baud. He couldn't/wouldn't tell me anything about the content of the messaging. Still would like to hear from anybody who knows anthing about it...

If you want the junky phones they give you with the service
contract...sure. If you want a decent phone (7760 or 7860 etc.), you have
to pay extra for them...so $200 may be a very good price..depending on the
phone.

if you have no previous technical skills, then let someone who does
mod your radio...

this is what you do for extended TX...

Open FT990 like explained in your OPERATING MANUAL.
Localise JP5002 on "CONTROL UNIT" and close it with solder.

If no transmit between 4 to 6.5 MHZ and 8 to 10 MHZ, do the following:

Display 5.5 MHZ in CW mode, "meter selector" to ALC, push "MOX" button
and adjust VR1003 on "RF UNIT" for normal ALC meter deflection.
Display 9 MHZ and do the same with VR1005.

QRS - Could you slow down to 5wpm for us Technicians?
:-)

Seriously, I thought you made some good points. As a technician looking down the road, I have to admit that the relaxing of the code requirements makes it more likely that I'll advance in amateur radio. I'll get flamed for this, but the truth is that time is at a premium these days. I suspect that I'm not the only person who has difficulty with the notion of spending a considerable amount of this precious resource learning a form of communication that I have no intention of using beyond the test.

If a person is into CW and wants to bang a key at 20 to 40 wpm, that's wonderful! My hat's off and I'm in awe of their accomplishment. But why should those of us who are not particularly enamored with CW have to demonstrate this ability to gain access to additional spectrum that we want to TALK on? Please, let's don't go to the "it builds character" or the "I had to do it, so you have to do it" end of the pool. The "it's the global form of communication for emergencies" argument doesn't seem to hold much water either as the military and public service branches have dropped support for it.

Don't get me wrong, I think that advancement SHOULD require effort! I don't have a problem with making the radio theory and operations sides of the advanced license classes more difficult. Amateur Radio is about understanding radio theory and proper station operation, so it's easy to see how these fit in the grand scheme of things. I have a more difficult time seeing the advantage of a 20 wpm code requirement.

Sorry to hear about the threat, it amazes me how often stuff like that comes up these days.

Mike
KG4GGE

PS - Just to get back on topic, any recommendations on a good 6m/2m/70cm base station? I'm looking for a quiet radio with a solid receiver and a clean transmitter.

Mine's been back to Yaesu twice for the same repair. Two meter side looses sensivity. Repair replaced a FET and another transistor in the front-end. After the second time for the same problem I did some searching to see if anyone else had a simalar problem, they have. The general thought seems to be the lack of protection diodes to prevent overload on these components so if you happen to be parked next to someone who transmits with high power (say 50 watts + or -) you can bet your going to loose your receive.

One other problem others had noted, I've not had this problem, was that the volume controls are surface mount type of components that don't hold up well. Both volume controls have a push button switch that you have to use to switch bands. Seems this force is enough to break the solder connections on whatever they're mounted to.

Aside from that I've enjoyed mine. Lots of features, not that hard to program (I'd spend the bucks for the programming kit), and good audio reports.

Greetings Bob, and others on the group. Well, I echo the sentiments of most of those who replied concerning the 8100. I have have been using one in my mobile now for about 5 months and love its performance. It doesn't seem to get hammered with intermod like some of my previous mobiles, but still has a pretty "hot" receiver. Scans fast and goes out of band nicely with a simple mod. Got mine used, but in mint condition with a tone board, for $370 shipped (Yahoo Auction). Good luck with your find.

From: peters@attglobal.net
Message-ID: <38AC94A1.9511892F@attglobal.net>
Source record: 85448

Should I buy one? Today I dug an old Swan 350 out of the closet, put up a 10 meter dipole (4 ft above a roof, 25 feet above ground) and starting turning switches and dialing. Got some strong signals (20 db over 9) at around 28.4 (that is what I cut the wire for) but could only hear one side of the QSO's, lots of drift and background noise. Couldn't leave it alone and listen to anything. Yes, I cleaned all of the antenna connections and the feed line is short, but it is old RG58. Maybe if I clean up inside the receiver, it would help eliminate some of the noise as repeatedly operating the band switch helped. But, I don't think I want to turn it on again. If the new rigs require that much effort just to listen, I don't need to work anymore on my general. I don't have a base station VHF rig, using a hand held which works fine. (well sort of) I am willing to spend the bucks on a new rig, but it had better be good or I would just turn around and sell it, give up on HF. The FT-847 would upgrade me on VHF while letting me listen to HF and provide some needed motivation. I am not interested in fancy antennas or automatic tuners until I see that there are plenty of good stations that I would want to contact. I guess I am just 2 meter spoiled.

Personally, my favorite mod for the HR-2510 came from an old back issue of "73". No, it didn't give the old "all-band" CB freq range; rather an bit of a tweak for the PA section, using a higher Q predriver xstr and an increased output final PA xstr Motorola manufactured for the VHF-Lo market. Back "pre-ticket" I worked on quite a few of the little guys - still have two on the shelf waiting for me to take the code test- and the PA mod was the most rewarding after its use. I'm not sure why one would want to do a CB mod on it. No, I'm not anti-CB, it just doesn't perform (do that "swang thang") as well as the current CB "customs" would dictate. Guess I just got bored and moved on....one of the HR's is gonna get turned down soon, to feed a 28-144 transverter. Always have to keep trying something new.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.

The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

Was wondering if there were any mods for the HR-2510? It was made by Uniden. Basically the same radio as the old Radio Shack HTX-100 (I think that's the correct model #)

Thx in advance

You want to advance in Amateur Radio .... So the FCC needs to lower the
standards or requirements for you to do it. Hmmmmm........ Is it just me?

I agree that Amateur Radio is not what it was 20 or 30 years ago.
Hams generally do not build or repair there own equipment much anymore and
the radios are becoming more and more complex and integrated with computers.
The test requirements should change with the times. The name should also be
changed to something like "Digital Communicator" to reflect the new nature
of the hobby..

All well and good ..... But can you really call it advancement?

William Lee N5WRX

Sure, if you want to waste $3.00 a month. When my phone was stolen I made a police report and called my insurance company and my home owner's policy paid for it even though it was stolen from me in a store. Pretty good... Same applies with renter's insurance, also. The $3.00 you pay to BAM is wasted in most cases since you probably have that phone insured under a different policy. Oh, and, that $3.00 dollars a month will buy you a replacement phone that is most likely used so don't expect to get a new phone in every instance. This is the same crap the rental car companies try to pull with you when they know you are covered under your own auto policy.

That's the problem. It IS just you -- or, rather, too few of us to have
a real influence.

Which would make you happier -- relaxing the standards to maybe bring in
enough new hams to have some political clout, or watching ham radio
being legislated out of existence?

Those are the choices. One or the other will happen. I'm surprised
that we were even given this chance -- but, sadly, not surprised that so
many people are WASTING the chance with their "pull-up-the
-ladder-I-got-mine" attitude.

I don't need a mounting bracket, and I can figure it out without the manual. I use Plantronics headsets for mikes on my gear. Thus, I only need the radio itself. Email the address to send you a check for the UPS charges.

4875. Re: 1000MP Receiver Hiss. Why???

Source record: 85519

There is a mod for the 1000MP which greatly improves the S/N ratio and eliminates the hiss. It is a little preampt for the 70 Mhz stage, and costs $48 from INRAD. Everyone I know who uses the MP has done this mod and liked it. Including myself.

You know I keep hearing this 'lowering the standards' crap when the
only thing that really got the boot was the advanced CW speeds.

And they deserved to go! PERIOD!

While some can lament the test today, anyone that things it's easier
to cheat on is full of crap. In the old days, the FCC had a limited
question pool, and there were the BASH books, put out by a guy
named (I think) Dick Bash. He'd get people who took the FCC test
to remember questions, and keep adding them to the books. The
result was that you had a test in front of you to study with.

Yeah, they weren't that common, but they were there. I think with
the larger question pool the testing SHOULD be tougher.
Since I haven't taken a test since 1981, I really can't say what it is
now, but I CAN say what it was then.

This is one of the reasons I bought and sold 3 MP's...the INRAD board is a patch for a versatile but not outstanding radio. I've had Ten Tec Paragons that were quieter than the MP. Agreed on the 1000D. MP is not a BAD radio but not OUTSTANDING either. ARRL reviewers sure loved it in the QST review though. Could we all be missing something ?? 73, Brian K3USC

>Since I haven't taken a test since 1981, I really can't say what it is
>now, but I CAN say what it was then.

And I can tell you what it was like in 1963. I wonder how many hams would like to go back to what had to be endured to get a license in 1963? The ARRL study guide for the Novice exam was 4 pages and the ARRL study guide for the General (the class that granted all amateur priveleges) was 16 pages. Would any of the people studying the test today want to go back to the old tests? The present ARRL study guides are:

Now You're Talking: 443 pages
General Class: 315 pages
Extra Class: 358 pages

Maybe we should make these people study the 16 pages I had to study!

Dear om
if you can help me I`ll be happy :)

I have a Transceiver (Kenwood TS-140S)
But it is not work now

SYMPTOMS :

First time : good receive but audible alarm " UNLOCK "
with morse code time to time .

Now : - open display firs time (forexample 14.000.00)
- after opened display (like . . . . .)
- not receive also not any sound or hiss
- not transmit
- alarm " UNLOCK " with morse code repeatly .
- when I rotate Tuning knob display is open
like 14.230.00 but again . . . . . .after 1 second.

I measured 3.2V on back-up lithium battery .

> Hmmmmm........ Is it just me?

If you read my post again you'll see that I'm in favor of making the technical requirements for advancement more rigorous. Achieving 20wpm is an incredible accomplishment and I sincerely salute those of you who have done this. I'm even more impressed by those who have not only reached this level but continue to use it regularly keeping those skills sharp. The concept that I take issue with is that the ability to work CW (only one emission mode of many available) at a particular rate of speed somehow makes one more worthy of the title "amateur radio operator".

Let's look at an analogy: I work in the computer field (application architect) and can type about 45 wpm. That's also an accomplishment, but our secretary can hit 60 wpm! I think you'll agree that being proficient with a keyboard does not prove that one knows anything about computer science. Morse code is only a small part of the world of amateur radio. If you're into dits and dahs then by all means have a good time with it, but I don't think it's appropriate to look down upon other folks who are more interested in the technology side of the hobby.

> I agree that Amateur Radio is not what it was 20 or 30 years ago.
> Hams generally do not build or repair there own equipment much
> anymore and the radios are becoming more and more complex
> and integrated with computers.

Agreed, most hams don't build their own equipment anymore. I've been an electronics hobbyist since I was a kid and recently built a SW regenerative receiver just for the fun of it (I admit that it was from a kit, but even in the "good ol' days" many amateurs didn't actually design circuits but worked from schematics published by a smaller subset of the group). The radio doesn't hold a candle to my Yeasu FT-990, but I had a good time putting it together and managed to learn a few things in the process. I plan to give the radio to my nephew the next time I see him. Who knows, it might be the seed that someday grows him into another amateur radio enthusiest.

In preparing for my Novice and Technician exams I learned quite a bit about radio theory, station operation, antenna construction, RF radiation exposure, etc. Are you saying that these things don't qualify as an accomplishment? If so, I'm afraid I'll have to respectfully disagree with you.

> The test requirements should change with the times.

The requirements *have* changed, something that's quite naturally painful to those who tested under the old requirements.

> The name should also be changed to something like "Digital
> Communicator" to reflect the new nature of the hobby.

No, my wife's a "digital communicator" with her cellular phone. She has no idea what frequency it operates at, could care less what the length of wire is wound in it's little duck antenna, and probably wouldn't want one if she had to take a test proving she knew these things.

> All well and good ..... But can you really call it advancement?

As mentioned above, I've learned quite a bit in my amateur radio travels thus far. I'm working my way through the General Class theory now. I'm learning new things about a wonderfully interesting topic and having a ball doing it. Yes, I'd call it advancement.

We may never see eye to eye on this, but I still look forward to talking to you on the air someday.

made by jade products. has small 40 meter loop antenna and receiver that uses a ne602 double input. See http://www.jadeprod.com/slr.html for more info. I will throw in a tentec trans match kit and tentec enclosure.
Got it at Dayton last year and have realized that i have WAY to many projects on my plate.
The whole shebang cost a lot more than the 100 bucks im asking.
thanks

FS: Motorola 2-Way Trunked Radio System "Maxtrac 800" (410) Baltimore, Maryland, MD area

Dear News Readers,

I am selling my 5 unit, 2 base station Motorola 2-Way Trunked Programmable Radio System "Maxtrac 800". It runs on 800 megahertz frequencies. I will sell the system whole or separately.

I am asking $1500 for the system complete. All offers will be considered!

"BEST OFFER" GETS THE RADIOS !

The system specifically consists of:
5 Motorola 2-Way Trunked 800 MHz Mobile Radios "Maxtrac 800" Programmable 15W 1 System / 1 Subfleet ($3,907.50 new)
2 Base Control Stations ($748.00 new)
1 Deskset Base Station Extension ($434.11 new)

The system was used for my towing company, and we have reduced our fleet and have decided to utilize cellular communications. In Baltimore, a company called Nextel has purchased and is converting 75% of the analog 800 megahertz frequencies to digital signal only, reducing the system my radios operate on. The system was running on 20 different channels, and will probably be reduced to about 5 channels which might be pretty crowded in Baltimore, depending on how may radio users switch to digital or cellular.

If you have any suggestions on any places on the internet that I should advertise these radios, I would really appreciate your advise.

Then the next thing you need to look for is a voltage loss to the radio when high current is demanded of the power supply. Is your power supply dropping voltage under load? Check the fuse connection between the supply and the radio too. If all checks good, then simply take a voltmeter and start tracing the plus 12 volts all the way from the power supply output, through the DC wire and connector, into the radio. Maintain the negative lead of your voltmeter at the power supply negative point. Whistle into the mic of your radio on TX to force high current demand and make your measurements.

At least, that's what I'd do under those circumstances.

Greetings, and thanks for reading this. I am checking out frequencys for a purpose 6 meter repeater in Eastern Canada , (New Brunswick) . The purpose transmitt
frequency would be 53.430 mhz. and 51.73 mhz receive. I am looking for other transmitting repeaters on this frequency that could cause possible problems.

Those who know of any repeater on the same mentioned frequency can email me at ve9dwf@rac.ca

With the going prices of todays HAM radio market, I am interested in buying a complete, nostalgic Heathkit station from a friend of mine. I wanted to ask the members of this forum how much would the following items cost? The list are as follows:

-SB300 Transmitter

-SB400 Reciever

-Original Stock Microphone

-Heathkit Speed Keyer

(All these items are in very good condition with low hours of usage)

Reason for the sale of the whole station is because of neighbor relations and his constant interference problems. Please email me at your earliest convienence. I just wanted to know what price range I can work within for a good deal. Thanx and 73...

JM,

I have the PAR 6m loop for 6m SSB base use. AES sells this antenna. My priorities were omnidirectional, wide bandwidth, and little to no detuning in the rain. The PAR meets my needs exactly. Many so called omni loop antennas do not have a circular pattern. Also many of the small halos have very narrow bandwidth and are easily detuned by rain. I live in rain country and the tuning of the PAR is fine wet or dry. Some of the higher Q loop antennas may have a bit more gain, but again will suffer from narrow bandwidth and moisture detuning. No good for me. The PAR seems a bit light but has withstood two significant wind storms with no ill effects. This is a great antenna for my needs. If I need more gain, I will soon be using a KMA 5054 6m beam to maximize the signal in the proper direction.

For mobile use there are smaller, more robust loops that might be better suited for that environment. Good luck TR.

Small Aerospace firm always collecting resumes and future
employment contacts. Titles are irrelevant to us.
In keeping with the history of Aviation, we accept resumes
from everyone: Bicycle mechanics, hobbyists, HAM radio operators,
kit plane builders, rocket enthusiasts, as well as professional
engineers and scientists (undergraduate through graduate).

OPENINGS:

Aerospace Engineering, Electrical/Electronic, Mechanical:

Spacecraft / Rockets-- Design & Project Management, Systems Engineer,
Structures, Payload, Attitude Control, Telemetry, Flight Computer,
Tracking, Power, Thermal, all relevant subsystems from design through
flight following.

Other: Materials Engineering, Chemistry, Physics, Planetary Science,
and other related fields.

Aviation & Technical:

Airframe & Powerplant Technicians, Automotive Technicians, Electrical
Technicians, Machinists, Draftsman, CAD/CAM and other skilled labor
capable of enhancing our projects.

Hobbyists/Other:

Depending upon your skills, we also love working with people like HAMs,
skydivers, ultra-light pilots, kit builders, rocket & balloon
enthusiasts, and remote control fans. Often, these people provide a
valuable, experienced, and unique consulting & skills base in excess of
a standard engineer. Some even have educational and career
qualifications in excess of what we need. So, don't be shy.

COMPENSATION:

Arrangements run from 10% over your maximum job offers with full
employee package (for the super-duper engineers and grad students).

Other options include contractual work and partial ownership on a per
project basis. For example, when our engineers say "Hey! We should work
on something in that area."... we tend to recruit a CEO, CTO, and
project team and place that under a subsidiary relationship.

APPLICATIONS:

Email your resumes to: space_physics@yahoo.com

Thanks in advance for submitting to our HR database. We will not be replying to most applicants. Please indicate the length of time that you would be interested in tenure, geographic preferences, desired compensation range, and list your skills or experience by keyword.

HUH?? There are only 14 channels of FRS in the 460 Mhz band...
NOW there are 50+ CTCSS tones you can use BUT if a carrier is on
one of the 14 channels, you CANNOT use that channel with ANY PL
or CTCSS tone...your signal will get interferred with...
ALL the FRS radios have all 14 channels...the extras (like extra PL
tones) dont mean that much as far as operation...it does mean your
radio MAY stay quiet more often because you can choose a tone
that noone else can...but it doesnt mean you can use the channel
either!

Nope, they dont...GMRS is allowed more power, higher external
antennas (FRS is NOT), higher deviation which means better
signal to noise at the rcvr, and REPEATERS! Yes, the require
a license but they are what CLASS D CB WAS supposed to be..
And CB is NOT a hobby...it is a personal communication system
You want a hobby folks? Get a HAM ticket...I did at age 14.
and with the drop of the code requirement, even the GoodBuddy types
can get a license (unless they are too much a moron to take a test!)

I have a Keypad for a Collins KWM-380 for auction on eBay.

The URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=263640124

and the blurb is

This is a mint-condition keypad for the Collins KWM-380 transceiver.
Enables direct frequency entry from the keypad, storage of displayed
frequency into one of 10 memories, recall of frequencys stored in
memory, and "stepping" through the frequencies stored in memory. The
stepping feature is especially nice for contesting. This is a heavy
metal brute, weighs around two pounds and mounted on a rubber slab so it
stays put on your operating table. Comes with documentation, cable and
connector all ready to plug into your '380 and go. This is in like-new
condition, owned by a non-smoker who rarely used it. I honestly don't
think you could tell it from new. The last time I saw a KWM-380 keypad
advertised retail it was close to $300; I don't even know if they're
still available anywhere else but right here on good ol' eBay.

Check my other auctions for a KWM-380 SSB filter.

Closes 2/27/00.

Thank-you.

4933. License restructuring and equipment

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-18 00:00:00 UTC
From: Ne0p@aol.COM
Message-ID: <92.1a0967e.25de480d@aol.com>
Source record: 85475

Now that the FCC license restructuring is here and we can't do anything about it, lets hope that something good comes out of it in terms of equipment. If this does open up the floodgates for people getting licensed, lets hope that the manufactures respond by creating new products for new bands, and the like. NOW IS THE TIME TO START GETTING ON THEM. I went to kenwood'' Japan webpage today (www.kenwood.co.jp) and saw that they sell a 2.3 gig FM transceiver over there. Why don;t we have one here? Maybe because we need more activity on that band. It would be nice to see someone make a commercial 902 rig. Maybe Yaesu can upgrade the FT100 so that it actually works, and offers 222 on it. That would be a great rig. It would also be great to see a new version of the FT736 come out, but to offer band modules up to 10Gig. Lets hope that the influx of new hams causes the equipment makes to sit up and take notice, and offer us more choices for more bands. I just bought an Icom 746 and love it, but would love it even more if it had 222 and 432. Just my thoughts on this. We do need to push the manufactures into action on this, though.

Had this preoblem also. sign the money order with his name
then sign your name below his. Then put "for deposit only",
"prior endorsements guaranteed" and deposit in your account.

Some here will tell you this is forgery. Your intent is to recover
your money. it was always yours and by leaving a "paper trail"
you have shown NO intent to defraud.

NOT advice. but it works.

My opinion

And when I went to Saudi Arabia carrying a rifle and defending their interests, I could not operate reciprocal or even take a home grown exam. It seems that you have to be a member of the "royal" family to get licensed. Sometimes you just have to accept the facts of life, no matter how unjust. Its called "Sovereignty."

As a side note, in 1973 we should have begun developing alternatives to the Henry Kissinger engineered oil embargo, and let those folks over there deal with their beloved Saddam and Ayatollah.

Did you have the receipt? Without the receipt, should the bank give the
money to just anybody that brings the money order in?

>Why does the bank in question refuse to cancel a normal transaction
>and return his money?

I'm sure they will return the monry to the purchaser with a receipt.

>Perhaps a letter to the appropriate state bank
>examiner's office is in order.

Why would you assume that the bank has a state charter and not a national
charter?

Well i just found out that when you open up the VX5R for extended TX and
REC.
The ADMS-1 E version will no longer send Data to the radio.

So after backing up all my freq data, I made the mod and then tryed to
restore
my freq backup. Ha, No go. The VX5R display reads Clone ERROR.

Anyone else find this little problem.

I undid the mod and restored my saved freq's .

Guess when you open up the radio the ADMS software no longer works.

> it's specifically made out to his name!!!!

If your name is not on the money order, don't even waste time trying
to cash it without a receipt. Instead, write "for deposit only" on the
back and deposit it in your checking account. It may take a few days to
clear, but at least you'll have your money.

In the future, use Post Office money orders. There is a place on
these money orders for both the sender's and receiver's name. If it is
returned, the sender can also cash it.

I, on the other hand, have been burned by dishonest individuals selling stuff. Because of that, I will not do business with a person that will only ship after receiving money up front (money order, or whatever). In fact, I'm very wary of any individual that flatly refuses to ship COD.

You're the seller, Piero. You're the one that wants money. Therefore, in my book, you're the one who has to take the risks. If given a cloice between sending you money up front, or buying a product elsewhere for more, I'll shop elsewhere everytime.

Besides, why would I want to send money to a total stranger? When I buy from an established company, there is something more substantial on the other end. You're just some guy sitting in front of a computer. You would have to prove to me that you were honest before I would send you money up front (finance records, references, and/or anything else a real business would have). Even with a regular business there is no guarantee that the transaction will go smoothly, but it has a far better chance than it does when dealing with an individual.

Unless you do a lot of business, the situations you describe above are very rare. I've done business with UPS and FedEx for years and have only had problems a couple of times (usually circumstances other than a straight transaction involved).

You're claim that a person can file a "fraud complaint with the Postal Inspectors" really would make me nervious dealing with you. If you know as much as you suggest, than you should know that no investigation is launched unless large amounts of money are involved or a history of complaints exist. Therefore, to hide behind this to justify your business practice of accepting only money up front, when you know that

nothing will be done if the person complains about you (assuming you did rip someone off), clearly suggests to me that I would not want to do business with you.

Interesting! I recently bought a certified check from my bank, for the
same purpose. Since I had never done this before, I asked the teller
if, in case the deal falls through, can I redeem the certified check
and get my money back.

Her answer was "Sure, no problem. We will just mark it 'Not Used
for Intended Purpose', cancel it, and give you back your money".
One would think that whatever the policy is regarding this, that
it would be the same at all banks ???

In my case there was nothing wrong with the deal, it was
consummated, so I did not get a chance to test the teller's story.

A well-documented situation. From The Unofficial VX-5R Mods page:

4/12/99
The ADMS-1E has been released...template modifier will NOT work with it...ADMS-1E reports a check sum error if you attempt to use TMOD (Template Modifier) or hex edit it. I guess RT Systems knows about the Template modifier and put some code in the program to reject the RDF if any changes are made at all...

Hold down the UP *or* down key for a second. The unit will start
scanning the programmed freqs.

Go to the VX-1R mods page, and purchase the little "cheat sheet" book -
VERY handy and complete.

> The best ones I've seen so far...

The Vertex VFX-10 and the original Kenwood are my two favorites of the scores available. And the Kenwood is available for only sixty bucks each now.

The Vertex is elegantly simple to operate: just to knobs. ON/OFF VOLUME, and CHANNEL SELECTOR. Couldn't be easier to operate. Slim and sleek, and a full 500mW output. If you're in a busy area, it has 6 DCS codes for privacy. Built bullet-proof. When I test HTs, they get dropped from three feet into a bathroom sink - the Vertex' plastic case is great.

Want "bells and whistles?" Then look at the original Kenwood. CTCSS, audio inversion voice scrambling. LCD readout. Scanning with their speaker-mike attached. Although "only" 300mW output, this fact did not really make much of a difference in communications test as far as distance was concerned.

The Standard FRS unit is now discontinued - Vertex acquired it, and is maintaining their own FRS units.

Hello, gary, go to the post office where you bought the money order. Hopefully
you still have your reciept. Ask to talk to the postmaster there or whomever
is in charge. Tell them what happened, i'm sure they will investigate it. They
can find out who cashed the MO, when and where. If you have an email trail on
your computer from the transaction, print that out and bring it with you to the
PO, and show it to them also.
Sorry to hear you had a problem...
Best of luck... Joe

Sounds like RF getting into the microphone cable. I have a similar problem when I use the stock mike on 10M. Even with the VFO locked, you can still use the UP and DOWN buttons to change frequency. RF really confuses the heck out of the rig.

Sure it would. Certainly the USA leverages our desires with certain trade benefits and sanctions. If your gubmn't doesn't know your desire to have CEPT-like priveleges with China, then
they won't know to axe for it during the next "most favored trading nation" debates or campaign
financing drives.

> over there?

Your response was so transparent (and elitist). So it does have to do with my being a Tech!!!

I operated a lot. KH2 was a blast. I could announce a break and go eat supper and they would
still be callin half an hour later. I also had a lot of really good ragchews around the Pacific.
Very interesting people out there. HL9 would have been better if I didn't have to work all the
damned time. I got same HF priveleges I held in America. Their power was dirty and blew up my
power supply. I tried to get parts to repair it, but I was at the end of the world on that one.
I used a "borrowed" battery for quite a while. I finally hooked up with another ham that had a
spare and I was back in business. They had a rule at the time no mobile ops, so I couldn't operate while convoying or in a field status, which was a lot. T5 sucked because of the

situation, but I worked a fair amount using pacer bounce and a 500w amplifier. I was suprised at
how poor that particular military HF radio received. Then I hooked up with a marine that brought
a full amateur station. We worked opposite shifts, so his station was always available when I was
off. One lebanese ham even invited me to visit his home. Ha!

> Eletist extra is not a birth right.

All you have a "right" to is Extra - because you earned it. Part 97 doesn't grant elitist attitude.

> Like all Extra class license holders, I
> have worked for my extra class ticket and 20++ WPM morse code capabiliy. I am

> Joe K7JOE
> dit dit

Joe, I understand that you are proud of your accomplishments, and I am proud of mine. You seem
to have chilled since your original T-shirt post, but I still think that the T-shirt idea is in
very poor taste. Hopefully we won't have a bunch of pot-bellied Extras stompin around hamfests in
one of your embarassing t-shirts.

Reciprocal licensing is not a right. It is a privilege granted by SOME
countries to SOME users.

I would hazard a guess that you could challenge that country's own CW
exam if the code requirement is a problem. If worse comes to worse, you
could actually get the local license, if you are up to their standards.

The only thing you need to do is write "Not used for purpose intended" on the back of the money order and sign it. They will refund. They keep a record of who bought it. I know, I'm in the banking business and that is how it would be handled with us.

Also, I would consider myself lucky that this individual, while a bit confused, was honest enough to return the money order. I would be disappointed that I didn't get the TNC, but again, you didn't loose your money.

I still can't seem to get the virtual
jumper to work. Actually, I can't find
it on the screen. There is nothing on
the upper right hand side.

Do I have to download, upload then
download again in order for the virtual
jumper to be activated?

Richard:

Please take a good look at your FCC license. I do believe that it conveys all the privileges within the US and it's teritories and with all treaties laws, orders, and rules and regulations. It does not guarantee that you will have privileges everywhere in the world. It is the treaties that grant you privileges in other parts of the world without having to take an exam. This seems to be a major misunderstanding that has now arisen. Just because your are an AMerican with an Extra class license gives you squat in Singapore without their permission. It is a treaty with both countries that will allow you to operate without having to take a test in that country. Yes there will issues in the near future where reciprocal aggreements will need to be ammended and renegoitiatied. In the short term you may suffer for the lack of operation in a foreign country. These will be ironed out in time. Remember the US is not the only country restructureing. This is a wave that is sweeping over many countries. It may take some longer to implement changes. Changes are on the way. They are inevitable. But as for the license granted by the FCC, you technically have not lost any privileges within the US and it's territories. This is a fine line but it is so.

regards
james

Your assertions above may apply to SOME consumer SS devices, but
NOT to the AT&T phones, based on my employer's chipset, for which
I was one of the principal architects ... our chipset/software solution
bursts
data for less than 2.5 ms (milliseconds) in each direction, then hops to a
new channel. We also use a fully adaptive hopping algorithm, which
swaps out bad channels (channels trashed by interference or deep multipath
fades which exceed link margin at end of range). Finally, we use the entire
902-928 MHz band (actually each phone adaptively uses the best 25 of
about 90 channels available in the band and hops them in pseudorandom
sequence, substituting new channels from the "pool" as necessary to avoid
interference (from/to other occupants of the band.) The very short bursts
of energy on any given channel, the system's relatively wide bandwidth, and
the adaptive hopping algorithm's behavior all contribute to reducing the
potential for interference with, for example amateur operations.

OPCS (Other People's Crummy Solutions) may "spend several hundred
milliseconds on a channel" and not be "truly frequency agile", but the
system
which *I* designed does not have those failings. :-)

> Sporadic, static-like
> choppiness can be heard in a NBFM receiver that happens to be tuned to
> one of the phone's channels.

This could conceivably occur *IF* the NBFM receiver was listening to a weak
intended signal (in the 902-928 Mhz band) and the 900 MHz FHSS cordless
phone was VERY close to the receiver.

> Every Part 15 SS device (and every legal ham device, as far as I know)
> uses a publicly-documented spreading algorithm and code, as required by
> the FCC.

Bzzzzzt ... wrong answer :-)

Part 15 devices are NOT required to "publicly document their spreading
algoright and code (in fact in our system the hopping sequence is partially
based on truly random data and partly on the system security code and
partly on something else which I'm not going to tell you :-) Also, since
the hopping is adaptive, the hop sequence can be constantly changing
as interferers come and go in the band.

Also, the FCC recently removed most of the ridiculous restrictions
which they had placed on amateur SS operation and any spreading
sequence/code is not allowable, not just the 3 ridiculously inadequate
sequences of the past.

> It's a mistake to think that consumer SS devices provide any
> real security against those who are willing to spend the $$$ to listen
> in. If you are planning to start up a drug-running post-Y2K doomsday
> militia, don't count on one of these phones to keep Janet Reno out of
> your hair!

While the security of consumer SS devices is not what NSA would
consider "cryptographically secure" (to their standards), it's pretty
damned good. And the purpose of security in consumer SS devices
is NOT to hide illegal activity, but to prevent eavsdropping by your
neighbors, business competitors, etc. Not to keep the feds from
listening. If the feds want to listen they can do so on the telco side ...
in fact the telcos are required to "pipe" your line to the local FBI
office upon presentation of the proper warrants under the new
world order ... no fooling. The feds don't have to screw around
with trying to"hack" your SS phone ... they just call the phone company,
fax over a copy of the warrant, and start listening in the comfort of
their own offices in the Federal Building.

However, as far as "hacking" is concerned ... I would venture to
guesstimate that it would cost ... at a minimum ... hundreds of thousands
of dollars in equipment and manpower to "snoop" one of the cordless
phones based on "my" chipset ... in addition to the adaptive hopping and
digital transmission, the data is scrambled (for data whitening in the short
term), encrypted (not something the NSA would have a hard time with,
but more than enough to hose the average industrial espionage 007 wannabe),
and encoded with FEC coding.

Have fun trying!

Hi, folks,
I'm considering the purchase of a decent general-coverage receiver and
am drawn toward the Icom R75.
I read the review in QST (January 2000) but was wondering if anyone
in the group has had practical experience with the radio.
All opinions are welcome.
Thanks!

4997. Re: Icom 746 filter question

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-20 00:00:00 UTC
From: Matt Erickson <kk5dr@hotmail.com>
Message-ID: <38B001FB.FC390A6D@hotmail.com>
Source record: 85299

With a 1.9khz filter in use, the audio is narrower, it has to be, the laws of physics, and radio theory all apply. Squeeze a wide signal through a narrow filter, and what you get out the other end is a narrower signal, that is what filters do. The removed portion of the filtered signal can not be restored, minus the interference. It's just some thing you have to live with, if you wish to get rid of the offending signal. The technology currently does not exist to do it any other way.

Source record: 85301

I would also like to add a question.
I know the IC-746 allows you to add two optional filters in the9 MHZ IF and One optional filter in the 455 KHZ IF. I saw on the PCB that there is a small 455 KHZ IF filter placed in teh middle of a big area reserved for a larger 455 MHZ IF filter.
My question is ....Has anyone removed this small 455MHZ filter and installed a another filter. I know it involves soldering.
DID ICOM initially plan on allowing two drop in 455 MHZ filters etc. ?? DID they put this cheap 455 KHZ filter to save $?
ANy help appreciated.

For Sale: Motorola Saber I VHF Radio w/accessories

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=260444596

Factory ID - H43SAN7139AN

Radio Specs:
12 channels
6 watt output
146-174Mhz
CTCSS/DCS/PL/MDC600/MDC1200 capable
Radio comes programmed to your specs

Radio Comes With:
Antenna & Radio programming terminal protector
Two (2) New High Capacity Batteries
Remote Speaker/Mic w/earphone jack - NMN6166C
Motorola Rapid Charger & Conditioner - NTN4734A
Motorola Leather Swivel Holster/Case w/strap
RIB Programming Cable (not shown)
Saber RSS Programming Software (not shown - you must have the necessary licenses to use it)

This unit is in excellent shape (10 out of 10 cosmetically) and is guaranteed to be in 100% working condition. All included accessories are genuine Motorola parts (except RIB cable) and in excellent condition. Selling because it is not needed anymore. I've been told that this package is worth over $1500! Reserve price is VERY reasonable. If there is not enough interest in this as a package, I will resell the items individually. Please email with any questions. Good luck, and thanks for looking!

This unit is in excellent shape (10 out of 10 cosmetically) and is guaranteed to be in 100% working condition. All included accessories are genuine Motorola parts (except RIB cable) and in excellent condition. Selling because it is not needed anymore. I've been told that this package is worth over $1500! Reserve price is VERY reasonable. If there is not enough interest in this as a package, I will resell the items individually. Please email with any questions. Good luck, and thanks for looking!

The "noise floor" is NOT raised over the entire band by FHSS. What
it can cause is very brief (in the case of the system implemented by
the cordless phone chipset produced by my employer <2.5 millisecond)
bursts of energy on a given channel. Furthermore, in the case of that
system, the bandwidth is MUCH wider than a SSB or CW receiver's
bandwidth, so only a small fraction of the FHSS system's transmitted
energy would fall within your receiver's bandwidth. This, coupled with
the relatively low power levels, reduces the potential for interference
significantly.

(DSSS does raise the noise floor and over a rather wide bandwidth,
but DSSS is not a great choice for bands which are not wide enough
to allow a LOT of spreading.)

> Those doing EME work

Those doing EME work could benefit greatly from using better
techniques than "brute force" power and outdated modulation
schemes.

> and weak signal high speed CW

Using "weak signal" and "high speed CW" in the same phrase
is a bit of an oxymoron.

> or even SSB and CW are very concerned about this trend.

People often fear what they don't understand. The FCC does
not share this concern ... they recently liberalized the amateur
SS rules. And SS was introduced into the Part 15 unlicensed
bands (which we share at 900 MHz, 2.4 GHz, and 5 GHz)
because it reduces the potential for interference.

Hi all
I'm a new ham and need some input on equipment.I'm currently a tech no code,and am working on cw for the upgrade.I would like to upgrade to general class before april 15.I now have a Yaesu FT-2600 2meter mobile,and a Yaesu FT-757GX for HF when I get the upgrade.I need advice on an antenna tuner and antennas for HF.Also what are some different base mics that would work well on the 757?I'm intersted in some other radios for possible future purchases, and would like to hear from some who have experience with them.They are;Yaesu FT-100, Yaesu FT-847, Icom IC-706MKIIG.Thanks for all comments

When driving my 8072 final to more than 40 or 50 watts I hear a hum in the headphones when first keyed.... HMMmmm but it's only present during the first 2 or 3 chars send. There is no hum heard during long transmissions or after a few chars with the keyer but as soon as I stop keying for a minute or two it returns for a few chars... I also notice a slight fall off in output power during this hum say from 60 watts it drifts down to maybe 55 - 58 watts and then hold pretty much steady there... Is this by any chance a function of the capacitive filters in the HV supply? The rig uses ONLY caps to filter the HV... no choke!

Message-ID: <NhWr4.9831$AG2.235859@news.rdc2.mi.home.com>
Source record: 85314

Hi, i would like to be able to use my dual band full duplex HT, as a short distance phone for a short time, and have some kind of phone patch here, using 2 ht's (a 2 meter and 440), one would transmit the person i'm talking to, and the other ht would recieve the signal from my dualband for when i am talking. Are there any phone patch units that would send out a "ring" on the tx ht when someone is calling? and i can enter a dtmf code to answer it? If not, oh well. But what are some good phone patch units? not too expensive maybe also.

Certainly, everything's relative.

Good mic, excellent audio and ALC circuit, reliable
> power (5-10-50 watts switchable). Tolerant of antenna problems and
> car voltages. It's a little fussy (i.e., un-intuitive) to program,
> but I've had mine in daily use for over a year and can't complain
> about anything. And, as you said, built-in DTMF (but decoder is
> optional).

My understanding is that DTMF encoder AND decoder is built-in. I
thought it was the CTCSS decoder that is optional.

What's a better mobile transceiver for a lower price?

I don't know of any. HOWEVER, my impression is that for relatively
little money more (and again, everything's relative :), there are
better rigs. The lowest price I have seen for the Kenwood 261 is
179.-. The ICOM 2100 can be had for 193.- at AES and, at least on
paper, it looks a lot nicer. For again a bit more (209.- @ AES), the
Yaesu 2600 looks like a much newer rig with many more options, more
sensitivity, less intermod, higher power etc. If you add $60.- for the
CTCSS decoder on the 261 (standard in both ICOM and Yaesu), the
Kenwood is actually the most expensive.

Of course, neither the Yaesu nor ICOM have DTMF decoding (not even
optional). And, admittedly, all my judgement is based on reading
reviews and specs, I have no first-hand experience at all. If anybody has
any additional information about these three rigs (ICOM 2100, Yaesu
2600 and Kenwood 261), perhaps even first-hand experience with more
than one of them, I would certainly love to hear about that. I am
about to order one Yaesu (which I think is the best of the three) for
one of my cars and one ICOM for the other (the Yaesu does not fit into
the dash of that car).

Download the demo of AirSCAN, software for the BC895XLT and a few other scanners. AirSCAN is a very convenient package used for finding and labeling active frequencies (similar to a "bandscope"), counting hits in frequency ranges, saving and loading previous searches, managing your scanners banks, counting hits on your existing scanner banks, and using the new "extended banks" A-Z adding 2080 more channels for your scanner!

See Silver Software website.

The 1.9 Mhz filter doesn't do anything that you can't do manually with the twin passband tuning. I bought and installed one on my 756, and presumably it would do the same for a 746. Only advantage to having the filter is that I can quickly press the "SSB" button to connect the filter without having to twiddle with the passband tuning adjustments.

Al, W2JUV

Well, and additional filter will provide a sharper slope than that available via the PBT control, but the difference may not be much (depending on the quality of the filter), and may not be worth the additional cost, depending on your needs.

As to the other question regarding whether you need both the 455 and 9 MHz optional filters, that too is somewhat up to the user. If you have both filters the PBT will be able to control the shape of the passband a little more effectively since it will have both filters to work with, but again the improvement may or may not be worth it vs. the cost. The improvement will not be dramatic in any event, but if you're picky and have the $$ then you may want to go for it.

And in response to the original question, yes, the IC-746 does use a cheaper ceramic 455 kHz stock filter, and the PC board is silk-screened and drilled for the larger crystal filter package, so it appears that it would be any easy swap. Again, the question is whether the improvement would be worth the cost. If you were to go this way, I would suggest getting the Inrad 2.1 filter set (455 kHz and 9 MHz IF). Not the cheapest solution, but probably the one that would provide the biggest improvement. The IC-756 is equipped with a crystal filter in this slot I believe, but for the life of me I've never been able to discern any noticeable performance or audio quality difference between the 746 and 756 so it may be one of those things that matters more on the test bench than in the real world. Still, if anyone does have any experience in swapping the 455 ceramic filter I would be interested in hearing about it.

73,

- Seth N6BMB

Hi from my exierencey your going to need the Icom ct-17 ???(think thats the right model) I tried several diferent solutions, the MFJ level convertor and anthoer I had from a software interface package for Kenwood 440. I spent many hours trying to get the various interfaces to work, thought that the rig had a problem, until I tried the Icom interface and then every thing worked ok.

When someone says "Motorola" and "portable products" in the
same sentence, I tend to think of commercial mobile radio.

If you're talking about Motorola Semiconductor's solution
for consumer cordless phones, INMSHO, our solution is
head and shoulders above that.

Howdy,

I have the IC-706 MK II G. It seems from the manual that the mic input is 600 ohms. Is this correct?

I want to use my Shure mic from the Kenwood TS-830S. (MC-50). It has High and Low (50 KOhms, and 500 Ohms) impedence. Now, my hope is that I can match, say, the 500 to the 600 with a transformer (I can wind it??). Or, is there something better I can do? The shure mic is flat, I think... would that be good on a MKIIG?

One of the reasons I wish to do this is that I have a boom mount so that I can have hands-free operation... I already created the conversion cable ... that works fine. Just the impedence mis-match causes the MC-50 to currently be way to weak for good operation.

Thanks!

Hi
Thanks for the replys.The FT-2600 is fairly new. Its's a great radio in my opinion.I'm thinking about getting something later on that has 6meters ,2 meters,and 440,that is all mode.This is why I am looking for comments on the rigs I listed in my previous post.I really like the 757,and probably will hang on to it.But if I can get a good rig with HF,VHF, and UHF all in one,and possibly a better radio,why not?Anyway ,I would like to look into an all mode VHF/UHF rig.

Thanks for all thoughts

Use the Shure mic set for 500 ohm impedance and don't worry about the apparent numerical mismatch with 600 ohms.

Impedance data for mics, headphones and speakers are "ballpark" figures only, and vary rather much over the audio frequency range.

If the Shure mic won't drive the rig, the problem is most likely simply low output level, not impedance mismatch. If I remember correctly the MC-50 is a dynamic mic. It is unlikely that it would have enough output to drive the Icom directly.

Most Icom rigs require amplified mics since the mics they furnish with the rigs (or recommend for them) are electret mics with amplifiers and the rig audio systems are designed accordingly.

You may have to build up a simple mic preamp, but this is easily done. Consult the ARRL Handbook for simple designs.

Howdy Tomas....Based solely on my experience, I wouldn't think that your problem is due to mismatch...(assume you are using the 500 ohm setup of that MC-50 of course). Impedance is only part of the requirement, with level being the other....output level of a particular cartridge, the directional characteristics of the microphone assembly and to a lesser degree the response curve of the mic can affect its use with a different transmitter.....the response curve will really affect the sound of it when SSB (suppressed carrier) mode is used. If that was my project, I'd want to monitor myself (or preferably someone else you know) using the combination to see if the response is acceptable...if it is, merely increase the mic level to suit - if its still not enough you may have to consider another cartridge OR an added preamp with just enough gain to restore good RF power output response to the audio input. Best of Luck!

From: CJ <cjr@visi.com>
Message-ID: <38B07D03.B191ECB6@visi.com>
Source record: 85340

Does anyone know where the concept that CW is "normal" when tuned LSB style, i.e. pitch increases as one tunes higher in frequency, and "reversed" when tuned USB style?

I ask the question because my own operating preference has always been for the "reversed" tuning. I do a fair amount of VHF/UHF weak signal operating where it is important to be able to switch between USB and CW with an absolute minimum of retuning at either end of the contact. In addition, although my memory may be faulty, I am quite certain that I always tuned CW that way -- even back in the days when it didn't make much difference because I didn't have a receiver with good enough selectivity to make much of a difference. And when I got more modern equipment, it was Yaesu and it tuned my way.

Then I encountered ICOM and Kenwood equipment that sometimes couldn't be made to tune CW USB style or didn't work as well when it could. I remember once seeing a rather involved modification for a TS-700, I think it was, to make it do CW USB style.

Well, this is not earth shattering and I hope I don't start another endless thread, but if you think you know I'd like to hear from you. Maybe its just various Japanese engineers' whims.

I am in full agreement with Marv. I bought the 9MHz 1.9KHz filter, and the 455KHz 250 Hz filter.

The 250 CW filter is great and worth the money. The 1.9 makes SSB audio sound like it's coming through a tin can but has no noticeable affet on the QRM, IMHO.

Save your money.

helmsman@mindspring.com wrote:
>
> TM-261A
> Anyone using one want to comment on it?
> Good, bad or otherwise.

I have one. Two complaints...

1 -
With the radio in auto repeater offset mode, it
works fine. Tune to a rpt freq and it automatically
sets the TX freq to the proper offset up or down.
That's perfectly normal.

But you can't tune to simplex on a repeater freq.
You can reverse the TX and RX freqs but you can't
tune simplex to either one of the pair of freqs.
It automatically sets TX to the offset.

Perhaps most people would not want to do that
anyway but there is a local freq in use near
my QTH that is technically within the repeater
pair frequencies. To talk simplex on that freq
I have to switch back and forth with the
reverse switch.

2 -
The microphone has that weird loop type hanger
instead of the more traditional button type that
most mobile microphones have. There's a solution
in that you can add a button like an aftermarket
cellphone button but it seems stupid to have the
loop thing in the first place.

Other than that, it's just a basic 2m mobile box
like the hundreds of other brands.

My $.02. Maybe that helps.

Nice idea on the 118 MHz rock. Only one problem...the 11M noise is loud and dirty around here - or so I'm told, haven't spent much time on 11M since getting my ticket - the whole idea was to get away from the crud that 11M had degraded into. I'd be a bit concerned that one of these guys might be in the neighborhood, splattering into my IF rig. Of course, then again, our local OO (5 blocks away) fires up his Henry 3K Classic on 10M and wipes out my 6M on Field Days now. Lord knows what would pop up on a 28 MHz IF!

With the response I've gotten so far, will probably break down and order one tomorrow - unless I see something REALLY good in a 2M all-mode on the swap groups.

Thanks,
Jimmy KC7BDP

I am recently getting back into ham radio but don't know that much about equipment. I am looking for a set of radios that I can use for my wife and I to communicate up to 100 miles away. I used to have a Kenwood rig but sold it. I remember something about handheld 2 meter or something serving the purpose I'm looking for. I have a license and my wife could get one. Anyone have any suggestions what type of radio I need or where to go to get more info on this?

The answer is yes, youll never know it's there. Thats the beauty of
spread spectrum or as it some times known "frquency hopping" it's not
on any one frequency long enought for you to know it just used the same
one you are on. It dosen't "eat up" the band it just hopps all over it.
It's the wave of the future.

If it's OK for a

Yes you did get my attention!

But why spend $200 for a used 10m radio? You can
spend $249.95 at AES and get a brand new dual band
RCI 2950DX which covers the 10 & 12 meter bands.

5054. TH-D7 AGAIN...

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-20 00:00:00 UTC
From: Olivier Gaude <ogaude@club-internet.fr>
Message-ID: <88oltigcc1@front5m.grolier.fr>
Source record: 85439

Dear friends,

I recently bought a transceiver KENWOOD TH-D7/E, which according to the various advertisings published in the specialized magazines, is able to operate in packet-radio mode as well in 1200 as in 9600 bauds with its integrated TNC. This feature made me choose this transceiver rather than another.

Alas, many problems concerning this transceiver tarnish the consideration I had for this company which gave me yet all satisfaction since many years:

The first significant point to mention is the laxism contained in the handbook. For example, the wiring diagram concerning the connecting cable between the PC and the TH-D7, supposedly to be specialized in the data transmissions, is false! An inversion on the wiring diagram will make us lose hours to seek the reason why the TH-D7 does not communicate with the PC...

What is serious, it is not this mistake by itself, but rather the fact that KENWOOD did not publish any corrective measure since 1998, date of the original handbook creation! This same error is always in the package of the new transceivers sold today! Does the Kenwood company have a such conscientiousness? One wonders it...

It is not all: as said above, this transceiver is the first to have an integrated TNC which makes possible to operate into packet-radio without any additional external equipment. Alas and alack, this TNC supports only a limited commands list and all of them don't operate properly.

Certain commands, however summarily documented in the handbook, do not have any interaction on the TNC. For instance, the command "PACTIME EVERY 10" is not accepted. Only the value "AFTER" can be understood by the TNC.

The ACKs frames are not sent by the transceiver: when we download the bulletins list from the local BBS, the TNC does not send the ACK even if good packets were received. On the other hand, when there is something to send in the TNC buffer to the BBS, the ACKs are well generated. The result of this is that the speed on the Air is incredibly slow.

The only way to leave this dead end would have been to configure the TNC in mode KISS (Keep It Simple Stupid) and use only the internal modem. Unfortunately, and although the commands "KISS ON" and "RESTART" are well in the available commands list, this specific Kenwood (Tasco) KISS protocol is not readable by any application softwares!

What doing now? I sent a fax at Kenwood-France, no answer. I wrote an e-mail at Kenwood-Japan: the answer is surprising " See with Kenwood

France "! No, no, there was nothing to laugh at in the situation...

In short, I am very astonished that a company such as KENWOOD, specialized, appreciated and well-known in the ham radio field, proposes a transceiver which does not give all satisfactions to its customers and who does not do anything more to correct the problems.

The KENWOOD official Web site does not even speak about a possible TNC firmware upgrade that other sites, nonofficial, however reports. This is unacceptable! And I will not speak about the set language held by Kenwood-France.

Anyway, all informations concerning a possible upgrade of the TH-D7 firmware will be more than welcome and I really hope that Kenwood will face up its reponsabilities towards its customers.

Regards,
Olivier F5PYF.

PS : sorry for my English mistakes, I speak french-frog a little bit better!

> sound like?

Not withstanding that not many folks are using SSB on 902-928, I'll
endeavour
to answer the question.

In the case of the FHSS phone build aroung my employer's chipset, probably a
bit like "the woodpecker" ... a short series of bursts <2.5 ms in duration
which
would occur in a pseudo-random pattern as the hopper "landed" on a channel
which encompassed your receive frequency. Now, not all that much energy
would be likely to land in your SSB receiver's bandwidth, because the
hopper's
signal is slightly greater than 250 kHz wide at the 20 dB points with 2
distinct
spectral peaks at carrier frequency +-64 kHz (the FSK shift is equal to the
symbol rate ... 128 kHz).

A DSSS system would sound like an increase in your noise floor (all the
time).

Thus, the FHSS system could be dealt with (to the extent it MIGHT
cause interference) with a noise blanker ... with the DSSS system, you'd
be stuck with the noise.

73,

Here is some simple advice, Go get your ham license and then get the
radio. With the use of many repeaters on the 2 meter band, you may go
further than 30 miles maybe 60 or so. There are a few here in
California that reach as far as 150 miles that I know of...

Hope this helps!!!

5064. Motorola HT 1000 NiCad Tech Help

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-21 00:00:00 UTC
From: Skippy <wrangler@northnet.org>
Message-ID: <38B1BD73.3E5698D8@northnet.org>
Source record: 85199

Howdy ,

I'm employed in the law enforcement/security field and am also a licensed Amateur Radio Operator . I have a few questions regarding the Motorola HT1000 handheld batteries .
I have read the manual that comes with the radio and I'm a little confused about the NiCad battery Motorola #NTN7143CR . The confusion arose when I read the section about the battery and the ,"no memory effect" with this battery .

The battery is allegedly fully charged in 1 hour using the supplied standard rate charging cradle with supplied adapter that's rated at 12v 2.4 w which seems appropriate for a 7.5v 1200 MaH battery .

I'm wondering if anyone knows what if anything Motorola has done to their batteries to eliminate the so called memory effect that many licensed operators have had to contend with NiCad batteries .

I'd appreciate it if when replying you could state your qualifications , ie. Radio Technician , Amateur Operator etc .

Any assistance , input to this is greatly appreciated .

Thanks , Kevin

Been to your FLAT state many times...I envy anyone who doesn't have 600-1000
foot mountains to block their signals. Can't say what your range will be
but I'd bet MUCH better than our 10 miles or so simplex range when we're
down in the valleys and canyons. Your repeaters must have awesome coverage!
BTW I love my HTX-242. Try to get it on sale as Radio Shack's list price of
$250 is way too high.

my old 1992 repeater directory shows that there were 14
repeaters on 2 meters then. I would expect that there are
several more by now. i wouldn't worry about getting 30
miles range while using them. You should be able to get
much better than that. i would try the 146.94 repeater and
ask questions.

This method is not too reliable. You need a method of locating all
sites pointing to yours, right? So - do a search using altavista,
for sites with links to yours.

The syntax for the link search is all on the Altavista advanced help.

Basically you search for link:blah.com.au/jabba
or whatever your site is.

This way you will find all sites linking to yours (within the currency
errors of Altavista) and you can compile an email list while you're at
it. Then when you next move your site, you can just email those
webmasters and request the change direct.

You will find other very useful facilities on the advanced help of
most search engines. The other one I use often is to limit the domain
range to sites in .au or .com. This does mean you won't find
Australian sites hosted at a non AU domain.

You mentioned that your employer's chipset produces some nearly random hopping - how is this decoded on the receiving end if there isn't a known sequence for the receiver to lock on to? There must be some relayed information or common sequencing scheme that would allow the two ends to decode each other's DSS signals - correct?

Actually, you CAN see spread sectrum on a spectrum analyzer. It shows up as an either increase in noise level over a wide but still restricted frequency range, or noise spikes over a wide but restricted range.

And of course we share the 902-928 MHz band with unlicensed, Part 15 devices, and ISM devices. Same as sharing 2.4 GHz. In addition, we have to give way in that band to Automatic Vehicle Position monitoring.

>miles or so.

With 45 watts and good repeaters, you can easily work double that
distance. However, you may find yourself unwelcome on ham repeaters if
you're totally unfamiliar with amateur radio and unlicensed. It would
be worth your while to get your license, learn the proper operating
procedures, and then go from there.

Or, you and your buddy could just get cell phones -- that'd be a lot
cheaper and no license is needed :-)

Yet another alternative that requires no licensing -- go to a radio
shop that sells business radios and get yourselves 35 watt Motorola
rigs. They run about $700 installed, and you get your own private
channels to talk on.

You're right. Out here hilltopping is great, it's the canyon floors that keep me off FM and on the HF bands. Our repeaters are great too, I just can't hit any unless I'm mobile: hilltopping again.
The distances to the horizon on the high plains are much farther than on our Eastern lowlands, so the equation gives surprising results out there. At 4-5000ft, the curvature of the earth actually becomes a factor. Now run the equation for a repeater on a 7000 ft mtn above a mile-high plain and see what you get. OK, I'm not talking about OK here, just dreaming about a little further West. My statement is true if you're surrounded by sheer granite walls and can't reach out to the repeaters (no tower, yet!) If I lived three miles up the road I'd be a happy VHFer, but in my location halfway up my canyon it's shortwave only! My horizons are measured in feet, not miles.

I am trying to identify some directional antenna smaller than a
traditional Yagi,
but still having the best possible performance, trouble free, etc.

I've looked at the Butternut Butterfly, and heard both good and bad
reports
on it, so I don't know what to think about it. I'd like to know REALLY
how
this antenna is, as well as any alternatives I should consider.

Please let me know your thoughts on the Butterfly or any other antennas
of
similar size that might also do well.

Thanks,

Mark

Go to eham.net and you will decide on the Icom 746 for a
tabletop/"portable" rig. Read the product reviews. For a mobile HF rig
buy the Icom 706xxxx. The Yaesu fans will say the FT-100. It had alot
of bugs early on and IMHO still does. I had to de-subscribe to the
Onelist FT-100 list because it was alot of guys complaining about their
FT-100s. They say it is fixed but I was in HRO yesterday and a guy came
in complaining about problems with an FT-100 he bought 3 weeks ago.

I have an FT-2600M too. I go by model, not brand.

Rich,

I've beeen watching ebay, eham, yahoo auctions, vhamfest and the local reecycler. Some have gone for less than $80, some more.

The new htx-10's have already been sold for $130 (on sale) at Radio Shack, and normal list is $150.

I've heard of this. I don't remember the URL, but I do remember that when I found it, I was exploring, starting with http://www.qsl.net/atn (the web page for the Southern California ATV repeater network). Somehow, it's "library" section led me to a page (which may not be theirs) that had this, and also had something about homebrewing 2m cavities.

If that doesn't help, try a search engine.

5086. Re: CW / CW Reverse (and now USB/LSB question)

Message-ID: <20000220213508.15387.00000654@ng-fn1.aol.com>
Source record: 85360

I have a question of a similar nature. I've never understood why USB signals seem to be on the "lower" side of the signal and the opposite is true of LSB signals. In other words, when I tune away from a USB signal (Donald Duck's voice gets higher pitched), I am tuning down in frequency and the reverse is true of LSB. It would seem that when I'm listening to USB, tuning "up" in frequency would cause the pitch to get higher and higher.

Am I confusing the pitch of the sound of the voice with the "direction" I'm tuning? Perhaps this is a silly question, but I've not been able to resolve this seeming paradox yet.

73,

5087. Need Fluke 341A Voltage Calibrator Schematic

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-21 00:00:00 UTC
From: CDT <xctx@onr.com>
Message-ID: <01bf7c2a$e0fcd580$a632c8cf@default>
Source record: 85361

Anyone have a Fluke 341A Voltage Calibrator Schematic?

My 341A works but I'd like to lower the drift at the microvolt
level. Since the unit uses 709 op-amps (about 25 years old)
I figure there are newer op-amps that might lower the drift
in at the 10 microvolt level.

thanks,

-CDT

5088. ElectroVoice 676 Microphone

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-21 00:00:00 UTC
From: "George T. Baker" <w5yr@att.net>
Message-ID: <38B0CE64.ABD876B0@att.net>
Source record: 85362

I have recently resurrected an EV 676 and started using it with my Kachina radio. Audio reports have been very gratifying.

I obtained this mic over 25 years ago - actually from a waste basket at a local college where it had been tossed as "broken" but had only a broken wire inside - and it has resided in one of those boxes containing jewels that are too valuable to throw away.

Now that I have seen how well it works, I am curious to learn more about the mic. If anyone has any spec sheets or other technical information on this old timer, I would very much appreciate having it. I recall seeing it advertised in QST back in the post-war era, along with the EV 664, but can't find anything in my files.

Thanks for any help.

I can change the offset on mine by using the <F> then <SHIFT> with no
problem.. As for the loop on the microphone, I just use the supplied
hanger..

Rod KI0KT

helmsman@mindspring.com wrote:
>
> TM-261A
> Anyone using one want to comment on it?
> Good, bad or otherwise.

I have one. Two complaints...

1 -
With the radio in auto repeater offset mode, it
works fine. Tune to a rpt freq and it automatically
sets the TX freq to the proper offset up or down.
That's perfectly normal.

But you can't tune to simplex on a repeater freq.
You can reverse the TX and RX freqs but you can't
tune simplex to either one of the pair of freqs.
It automatically sets TX to the offset.

Perhaps most people would not want to do that
anyway but there is a local freq in use near
my QTH that is technically within the repeater
pair frequencies. To talk simplex on that freq
I have to switch back and forth with the
reverse switch.

2 -
The microphone has that weird loop type hanger
instead of the more traditional button type that
most mobile microphones have. There's a solution
in that you can add a button like an aftermarket
cellphone button but it seems stupid to have the
loop thing in the first place.

Other than that, it's just a basic 2m mobile box
like the hundreds of other brands.

My $.02. Maybe that helps.

Same thing on my radio..... you have to open it up, or have someone
do it. The SMA center conductor in my unit broke the solder loose
from the pad on the pc board. It is simple enough to resolder.....
but carefully..... it IS about the largest solderable joint in the
unit. Good luck

There is no significant difference between a 500 Ohm and a 600 Ohm impedance microphone. Just connect it and it should work.

True, but then you have the same offset for the entire radio. You (or at least I) can't set one memory location for no offset and have the rest of the radio use the normal 600 offset.

Hey Jefferey,

At the following link you'll find the diagram that you need. I didn't want to use the speaker plug on the rear of the radio so I brought speaker audio up to the front mic connector. I tapped the audio from the hot part of the volume pot. By doing that, I was able to turn down the volume on the radio and still get good copy. If I want to monitor the local repeater for a few, I don't have to disconnect the rear speaker plug to listen.

A 2-meter hand held radio for each of you would be good. Get a couple hand helds and a repeater directory, that will keep you in contact. The repeaters themselves play the major part in how far you can make it like so, The higher the altitude and output power of the repeater means more coverage, Linked repeaters can cover over several hundred miles. There is a 220 mhz repeater system that covers most of the Western states and some Mid-west called the Condor Connection all via links. Best thing to do is, ask a ham near you that has these capabilities or just get one radio to test the waters that way you dont spend too much. I wont give you any suggestions on what brand of radio to get, because there a several and each brand makes a good rig.

Hope this helps!

AM signal is composed of tree part : two sides bands and a carrier.
Generally, AM signal is present as an frequency who you simply vary the
"power" level (sorry to cutoff tech's words).

In real world, your voice is compose of mix of many many freq combine
together to make your natural sound. Low, med and high pitch notes. AM
generate a carrier (tunning freq) and two frequency band (your voice) each
side of the carrier. The Lower band part is similar to the upper band part.
50% of the transmit power is consume by carrier each band consume 25% of the
transmitted power.

If you filter out the carrier you have DSB (double side band) and if you
filter out one band you've get single side band then put all you precious
watts in this single part. Note : the upper band is similar to lower side
band (mirror copy). In SSB you put all the power to the message and nothing
to the carrier.

The receiver have to "decode" the signal by regenarating the AM. First you
inject the carrier (tunning the receiver) into the SSB and make a duplicate
of de Side band. With this regenarate AM you put it in a AM receiving part
Voil&#65533; ! voice again

In USB if you raise the tunning freq, the receiver made a copy of "reduced"
band = cave sound. Since you made a "copy line" (injected carrier) highier
then needed, you chop a part of the signal. One part is over the copy line
and one part is under the copy line. (The needed copy line must be under the
entire USB message to make a complete copy of the USB + LSB)

The part over this "copy line" is shifted down in freq and the part under
the "copy line" will substract itself to the copy result.

When you lower the tunning freq, you have all the massage but you "push it"
far of the carrier in the high pitch note make a hole in the lower voice
note.

In LSB, you have similar but reverse effect

In CW, the voice message is composed of one frequency (the tone). In USB,
tunning up made the copy line close of the CW tone ; lower the tone and
lowering the tunning lower the copy line then raising the tone. Mirror
effect in LSB

I hope it,s may help

I'm trying to build a little circuit to make a relay close
when a signal is received by a radio. (Cobra's and midlands (FRS) are
what I'm working with).

I want to use the speaker port, but my problem is that the
speaker always has voltage across it, squelch regardless. Anyone who
knows audio circuits knows about this problem. Can anyone think of a
way to check "speaker activity" through the speaker port? Anyone
perhaps have a schematic sitting on the shelf? I'm not looking for
anything too special, just to close the relay to trigger my event.

Any and all help appreciated.

I've send e-mail to Kenwood over 2 weeks ago but no reply so far. I
have my mind set on a TH-D7 but as long as the TRX does not support
KISS the way it should I'm not getting one...
I bet others (Yaesu, Standard, Alinco) will have handhelds like that
soon enough and if they play it right their TNC will support 'real'
TNC commands...
Just wait and see...

One or two more things:

1) It has no alpha-tagging of channels which I'm still trying to get used to.

2) You can mitigate the fear of damage to the volume controls by getting used to using the button on the Mic to toggle back and forth.

3) As usual, the ADMS software has an annoying bug in it in the importing from a tpe file. I haven't reported it yet though.

4) After using an HT and a scanner, I really like the audio coming out of the speaker. More rich which is a big plus in a mobile env.

5) The fan kicks in on even the slightest keydown - not just when things get hot. This can be a slight bother when on the nightstand.

That is really interesting, Carl -- thanks! I stand corrected. It
looks like ARRL needs to bring the introductory chapters of their
spread-spectrum handbook up to date with the times, as they mention none
of this.

Those mountains become your friends if you locate repeaters atop them.
Otherwise, you have d = sqrt (2h) to contend with, where h = your
height in feet, and d = the distance to the radio horizon in miles.
In his flat state with an HT at eye level, the radio horizon will be
about 3 miles distant.

>Your repeaters must have awesome coverage!

Mountains are needed for that.

Message-ID: <20000221.175746.-40636065.1.ki0dz@juno.com>
Source record: 85218

Hello Rob,
I've had a Yaesu FT-757 for a few years and have been generally pleased with its performance. I don't do a WHOLE lot on HF, so it suits me. There is an automatic antenna tuner available for the rig (I'd sell you mine if you're interested). However, I'd heard that manual tuners are more versatile. So, I recently purchased a MFJ Deluxe Versa Tuner II which works fine with it. I also use my 757 as an IF for 6M with a Ten-Tec transverter.
For an HF antenna, I use a simple G5RV. It's great for someone just starting out who doesn't want to spend a whole lot of money on an antenna.
Hope this helps.

The Windows 3.1 program works really good with Windows 95, the MBX feature
is a mail box option, and Timewave was doing a repair special and upgrade
for around $100.00. The windows version of software is a lot easier to use,
then the DOS version, and it is easier to use the micros, my two only
problems was in the Florida heat it would shut down and I had to cut a hole
in the top and add a fan to cool the board and that the keying transistor
would not key an older model Kenwood TS 820S transceiver which was cured by
using a reed relay to key the Kenwood. KB4XJ

Maybe I am mistaken, but during my tenure with Motorola C&E
we could not find any decernable pattern on the Motorola
Portable Products using spread spectrum .. of course they
probably were a bit more complex and expensive. <G>

I have a Blazer with a Wilson 1000 roof top 11-meter antenna on it. I DO NOT want to install another antenna on it. Is it possible/feasable to unscrew the Wilson and install a 2-meter antenna in its place? If so, what kind? I DON'T want to cut the 11-meter 'stinger'. Coming up thru the roof, is an SO-239. The 2-meter antenna must have some sort of a base-load on it for weatherization purposes.

5137. 'Multi-CAT' and WinCAT (for Yaesu rigs)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-22 00:00:00 UTC
From: "JOSE V. GAVILA (EB5AGV/EC5AAU)" <eb5agv@ctv.es>

Source record: 85229
Cross-posted to: uk.radio.amateur,rec.radio.amateur.equipment

Hello!

Well, first than anything else, thanks for your positive response to my Yaesu FT-840 repair message. I am glad you (or at least, some of you ;-)) liked it. I think the best way to learn is by doing things by yourself, but nobody has all the rigs (nor the time) one would like to have. I would be glad to hear from other people who has also done repairs... any taker?

On the other hand, another topic which seems interesting is the 'Multi-CAT' interface. As I told you, it lets to manage up to FOUR rigs with only one serial port. There is a trick, though. It will work with any other CAT software but as a 'one rig only' interface. This is because it uses two lines from the serial port to select which rig is used. As this is really an easy thing to do, perhaps other programmers could also add to their software the 'rig selection' option...

Yesterday, I connected my FT-890 and FT-840 to the Multi-CAT and it performed fine with my old (1994!) WinCAT software. I have just started a new program, which will be called... you guessed it, WinCAT 2000!. I have lots of nice ideas for it. As now I only have an FT-840 and an FT-890 to work with, the program will run only 100% with these rigs. I know (as I started some years ago a program for it) that the FT-900 is very similar to the FT-890, CAT wise. So, if I get a copy of the CAT part of the FT-900 manual, I could adapt it easily. Other rigs, as the FT-747 or FT-757 could be added later if there is interest and if I get the info on them.

I plan to develop WinCAT 2000 as a FREEWARE software. Of course, any donation to help in the further development would be gratefully accepted.

I am also opened to ideas to implement in the software. As soon as I have a beta version available (it will also work with an standard IF-232 or compatible interface so everybody could run it), I will write a message. Meanwhile, if anybody wants to check any 'pre-beta' versions (made just for testing some particular thing, as different computers / serial ports), please, send me an e-mail and I will arrange an special 'pre-beta' e-mail list to advise you of the developments.

Well, as in any project of this kind, the success of it depends not only of me, but also of you and your interest and feedback. So, please, let me know your opinion / ideas about it.

Thanks and best regards,

JOSE

> Does anyone know if the mic jack configuration is
> identical between the VX10 and FT50RD?

Yes, it is. Vertex is the commercial side of Yaesu. The same speaker-mike plug configuration exists for the Yaesu VX-1R, VX-5R, and FT-50 series HTs...as well as the Vertex FRS VFX series and the commercial VX-10 series.

> Are these two radios the same?

Absolutely not. The VX-10 is a series of five commercial HTs. Single band units, they cover 134-160MHz or 148-174MHz on the VHF side, or 400-430MHz, 450-485MHz, or 485-512MHz on the UHF side.

The FT-50 series is are dual-band amateur HTs.

Geez, guys, I can't believe that every reply so far has been about repeaters. With 45 watts and small yagi antennas, there should be no problem whatever in covering 30 miles on FM simplex. You may have to "loosen" the squelch a little, though. I can work my buddy about 100 miles north of me here in Minnesota on 2m SSB almost any time we try. He runs 10 watts.

I definitely agree that the first step is to get the licenses. They are embarassingly easy to get these days.

Hello,

I have 5 different types of antennas for Amateur use up on Ebay Dutch auctions this week. They are:

Wide band VHF/UHF Discones
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=266083194

MaCo 5/8 wave 10 mt. vertical antennas
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=266095312

2mt. Mobile 5/8 wave magmounts
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=266110499

No Ground limited space antennas for 10 mt.
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=266135828

10 mt. indoor antennas
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=266151340

Remember, these are DUTCH auctions. Which means no worries about being outbid, or the price skyrocketing due to bidding wars. Each item has a set price. If you bid that price, you get one.

Thank you

Tim/N4YFX

5159. Question about grounding

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-22 00:00:00 UTC
From: Fred Cole <emeraldj@twcny.rr.com>
Message-ID: <20000222.16424597@KIRK.twcny.rr.com>
Source record: 85251

I have an IC-701 with the IC-701PS power supply. My two antennas are connected through my MFJ Versa Tuner II. From what I've noticed, I can transmit ssb on 10M with one antenna but I don't seem to be able to with the other antenna.

One antenna is an indoor 2m (I know I shouldn't even consider using it for TX) the other is a longwire. It's the two meter antenna that works for ssb. When I use the longwire on 10M I hear a screetch like feedback when I use higher than about 10 watts on CW. Also, when using the longwire, I can't even get the alc meter to even twitch, no matter how high or low I turn the mic gain.

Is this problem caused by a lack of a ground? Or is it just the operator? Since the power supply has a 3 wire plug, the connector to the rig is 3 wire, and the ground lug on the tuner is connected to the ground lug on the rig, doesn't that mean that they are already grounded? Do I need a ground in addition to the apparent house ground?

Since I live in a trailer park, with no nearby trees, I figure that the longwire is my best bet, unless someone else can give me a suggestion on homebrew antennas, I heard about an underground type but haven't found anymore info on them.

Tnx
Fred Cole - N2NRV

5160. Yaseu 767 SWR problems Help Please

Newsgroup: rec.radio.amateur.equipment

Source record: 85252

Hi,

I have just purchased a Yaesu 767 radio off of EBAY and was very excited as I have always wanted this particular radio. I am currently in the process of studying to earn my license. Of course for now that means I am operating on 11m only. Well ever since I received the radio, I have been unable to transmit on a brand new Antron 99 antenna along with brand new coaxial cable. I can receive ok but not as sensitive as it should be. Well the antenna tuner tries to tune the antenna to a good SWR but just can't seem to do it, and when I do try to transmit, the radio will not allow it because I believe it's own safety feature is kicking in to protect the radio. I tried to transmit on an identical Antron 99 11m antenna at a friend's house and had the same problem. Please help me with this guys. Is the 767 internal tuner designed to tune to 11m? Any help will be greatly appreciated.

Wes

I can assure you that the antenna tuner will tune there. I owned one
of those beauties and never had that problem.

5162. Rat Shack HTX-10 microphone pinouts

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-22 00:00:00 UTC
From: ccox@chopped-ham-filtre.uhc.com.invalid
Message-ID: <88ujb0$tff2$1@pike.uhc.com>
Source record: 85254

Good Day.

Has anyone figured out the correct pinouts for the HTX-10 microphone connector? They are not supplied in the user manual.

Mine has developed a fault. It appears that there is no bias being supplied to the electret mic element, and, so, there is no audio being fed into the radio. Bridging the electret element with a dynamic microphone causes decent sounding audio to be transmitted.

I have tried buzzing out the pins, but it's quite confusing!

It appears that the mic supplies a ground return to enable both the receive and transmit strips, and the up/down buttons seem to supply a positive potential to scan down, and a ground to scan up, but that certainly doesn't seem correct.

I'm unsure whether the microphone is at fault, or the radio itself. Of course it is now just outside the mingy 90 day warranty period so I'm reluctant to return it if I can just use a microphone from the junque box.

Thanks in advance.

FOR SALE: WORLD RADIO TV HANDBOOK 's

EVERY YEAR from 1976 through 1999 (24 books). All are in very good to excellent condition (1980 edition is fair to good).

Also will include with the set is the 1957 "World Radio Handbook" (before it was the WRTH). Condition of this 1957 edition is fair , but solid.. no pages are missing or even starting to fall out (minor coffee stain). 170 pages.

And also the WRTH "DX GUIDE" , 208 Pages, late summer of 1978 (excellent condition).

As an extra bonus will also include "World In My Ears" by Authur Cushen (very good condition). This book has been out of print for many years.

WILL ONLY SELL AS A SET !!!!! (WILL NOT BREAK UP ANY PART OF THESE - NO EXCEPTIONS !!!!)...SO DO NOT ASK IF I WOULD SELL JUST ONE YEAR , I will not !!!

At this time I'm taking offers on this entire rare "SET" (27 books). Please, serious inquires only. But if you have any questions please let me know. OFFER ONLY GOOD IN USA -LOWER 48 !!!! Will not ship outside the USA, or to AK or HI (too heavy and big). NO COD's will need payment before I ship.

Send your offer / or questions to me via e-mail direct, NOT to this news group. Will take offers only until Monday Feb. 28th at 1800 UTC..sharp on this , and of course will go to the highest "lucky" person (however I do have a "min"..value that I must see before I will let these go..so don't make your offer too low if you are "really" intrested)

DaveZ

5165. Re: Commercial Spread Spectrum OK in Ham bands???

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-22 00:00:00 UTC
From: Cortland Richmond <Cortland.Richmond@usa.alcatel.com>
Message-ID: <38B2D80D.71D44F27@usa.alcatel.com>
Source record: 85257

A spectrum analyzer's response depends on the fit between its bandwidth and the emission, and on the time it takes to sweep the range you are looking at. A direct sequence spread spectrum signal DOES look like noise -- broadband noise -- and it will raise the noise floor where it's present. The narrower SA bandwidth, though, the less you'll see. As to frequency hopping, it's easy to tell when an HF frequency hopper is in use as you can hear the modulation components before it moves on. But on a SA those signals show up as blips that appear and disappear on the frequency axis.

5170. SX-99 Problem -- Help!!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-22 00:00:00 UTC
From: Ron Evans <cosmos41@ix.netcom.com>
Message-ID: <38B2EB72.9162E335@ix.netcom.com>
Source record: 85262

Back in ham radio after a long hiatus, I recently bought a beautiful SX-99 to use in my Vintage Radio Station. I knew it had a few minor problems and was counting on someone with more technical expertise than I have to help me solve one or two of them.

The main problem is that barely bumping the rcvr or the table it sits on causes the cw note to warble (shift around in frequency) and then settle back down again. Just thumping the side of the rcvr has the same result. Is this a well-known problem with the SX-99? Is it the same stability problem that the SX-100 is known for?

Can someone please tell me how to proceed or where an article on the problem could be found? An answer here is great because others may have the same problem, but if u could email me, that would be even better for me since I can't access the newsgroups at work. My email address is cosmos41@ix.netcom.com

Thanks for any help you could provide. I really want to enjoy the old "gal" the way she was meant to be enjoyed -- "singing" rather than "yodeling." *grin*

Ron - K5MVR

Source record: 85263
Cross-posted to: rec.ham-radio,rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.misc

Well... Mobile to mobile good luck. Not too likely, unless you go
'external' through a repeater. In that case, it's strictly a repeater
coverage issue. With 45W, you'd be on the 'strong side' of the
statement that 'If you can hear it, you can work it' with most
repeaters.

Mobile to mobile is going to be degraded by the terain, and
as flat as it looks, it just ain't. Buildings and slight variances
in terrain are going to get you as well. 30 miles, well, maybe,
IF it were really 'flat' and IF you had fairly unobstructed path...

But if you have a repeater, over 'relatively' flat terrain, just getting
100' in the air and 30 miles is easy. That's FROM the repeater.
I couldn't run mobile to mobile from my home about 15 mi north
of Ft Worth to even downtown Ft Worth, but had no problem at
all running the same distace from my car to a friends house with
the antenna first 40' then later over 60' in the air. We made our
own repeater and routinely worked through it with 1W from 15
miles away using our HTs. But his 'base' was 60'+ in the air.
(This was both 2M and 220.)

Mike

What you want is something like a device called "The Night Logger". They used to be available at scanner dealers. It turned on a tape recorder when there was audio present on the speaker line. Another device is called a noise gate. It too could be modified to do what you want. Check out this web site:

From: Bubba <bubbajoe@mail.usa.com>
Message-ID: <xcFs4.566$Tr5.5724@typhoon.tampabay.rr.com>
Source record: 85273
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.cb,rec.radio.amateur.equipment

Design tips:
Use a capacitor (in your case it is a DC blocker)
Feed the audio (from the cap) into a diode (to rectify it)
feed the rectified audio into a comparator.
feed the other comparator input with a pot (to vary dc bias -- change your
trigger threshold)
feed the output of the comparator to a transistor (to act as a switch)

bob's your uncle. piece of cake.

Hello, Ron!

Gently tap on the top of each tube with the eraser end of a
pencil...especially the oscillator (BFO) and audio stages.

A clear 'ringing' sound on any of the tubes means that you have a , well,
'ringer' and the physical 'bump' is causing oscillation inside of the
envelope which is picked up and amplified by tubes further down the chain.

This is very good in distorted guitar amps, and very bad in radio receivers!

>
> Thanks,
>
> Fred NG3J

Other than keeping you from getting shocked, the grounding of the amp
won't really effect too much. Your main worry will be from fundimental
overload to the other users. Also what bands you use will have quite an
effect on if you cause problems or not. I would bet if you run that much
power someone will have a problem of some type. Mainly just from the
close proximity to the antenna. Many have run from townhomes but they
might have to bend their hours on the air, or bands used to keep the
peace. Some bands you might have little trouble at all. Others like 10
and 15 can really be a pain at times. It is their problem if they
receive your signal, and all your gear is clean with no spurious output,
but you still will have a heck of a time convincing the non-radio users.
The end unit couldn't hurt. Cable tv can sure be effected though. Mainly
from overload due to currents flowing on the shields. The quality of the
coax, and the methods of installation can have a big effect. With the
fiber optic cable I have now at this qth, the problem is much less than
it used to be. Of course, the house run from the pole is still
conventional cable , but I think we have quad shield now if I remember
right. That can help. On 80 and 40 , I can run legal limit with no tvi,
but I've had trouble on 10m with a third that power. A few years ago, I
was running 10m late at night with about 500w. I was getting into the
neighbors tv with it turned off! Was being rectified someway thru the
speakers I guess. The guy thought he had a burgler in the house talking.
I heard about it later on. I was ROFLOL for quite a while. I also got
into their cordless phone, and trashed the guys puter modem in the house
behind us. All on 10m. I don't get much of that on 75m.
I quit running an amp on 10m. Don't usually need it there anyway . MK

Don't go to a "hardware store" for an
industrial stength product. I recommend you
go to an Industrial Electrical Supply
Distributer. Consolidated Electric
Distributers or similar, depending on your
location.
Some only sell wholesale so you may have to
get an electrician (go to the local IBEW Union
office) to buy the part for you, or find one
that also retails. They will have the real
McCoy, plus the #4 solid copper and the 1/2"
buss bar to properly set up a grounding
panel. Make sure you NO-OX the connections.
The rod should be 5/8" X 8' and drive it all
but 1' into wet soil. If the soil is dry you
need to use a 10 or 12' rod. The supply house
will have it all.

Source record: 85108

I have another suggestion.

I would buy a AA battery case ($15 ?) for the radio, drill one hole for the filtered DC input wire (of course, you have to connect the inside wiring) and then any holes for the mounting hardware.

This way your radio can be mounted at anywhere and any angle you want and be powered by whatever source you want.

Hope this makes sense.

KK7BEN

"Mark Erbaugh" <mark@nospam.microenh.com> writes:

>1) Is such a mounting kit already available? Since I just purchased the
>radio, I don't have any dead battery packs to cannabolize.

Yaesu makes a "battery separation kit". It has one piece that mounts to the back of the radio, and another that mounts to the front of the battery, with a coiled cord in between. Both have clips to attach them to things. The idea is that you can use the radio itself like a speaker-mike (it's small and light enough) but have full controls and the antenna away from your body, while the heavy battery remains on your belt.

You may be able to modify this to do what you want.

>2) Can the radio take 12v DC through the battery contacts? The highest
>voltage battery available is 9.6v, but the radio has a jack for 12v

Check the radio manual (duh!). I think it can take up to 16 V.
However, you're supposed to use some electronics to provide noise filtering if powering the radio from a vehicle electrical system; Yaesu sells a cigarette lighter adapter that does this.

Dave

[..]

If what your are trying to accomplish is to activate a recorder when the squelch opens you may consider an equivalent method to do this using a computer, software and a sound card.

Check out http://www.davee.com/scanrec.html

This program can be set to activate at any given signal level (regardless of whether the squelch is open or not) and when that level is exceeded it will start recording.

Naturally, this solution is only semi-portable assuming that you have a hand held scanner and note book computer.... But it is fine for stationary or semi-stationary applications.

I have the 8 pin plug. The mike I have is marked GE Communications on the front, and on the back is 344A4528P55 Rev B, Assembled in Mexico.

It has 5 wires and I assumed Black is ground or common, so

Blk to red= open and then "0" with PTT
Blk to Grn= open and then 2 meg with PTT
Blk to wht= acts like cap is charging I stopped at 22 meg. PTT no effect.
Blk to Blue= 4.5mg, PTT no effect

Can I use this mike and how would I hook it up to the plug. Please give how I should look at the plug, front or back.

Thanks Norm

What do you mean "Going to the trouble"? There is no trouble
getting at least the beginners license. If doing a little work,
and I do mean little, then it really didn't mean much to you and you
should really look at getting NEXTEL radios.

David

Hello all,

I'm using a radio shack telescoping 36 ft antenna mast to support a 10m vertical and a dipole. Due to my space restrictions I am unable to guy the mast and it didn't do very well in the wind we had during a snow storm a few weeks ago. It now has a slight bend to it, but nothing that would make me worry about it coming down.

I would really like to put up a tri-band, lightweight, yagi this spring but the cost for a self supporting tower is a little out of my price range. I'm curious if anyone has found a cost effective tubular tower or heavy duty telescoping mast out there that would support a small tri-bander and rotator.

I would appreciate any info about your set-up.

5217. Problem with President HR2510 (long post)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-23 00:00:00 UTC
From: Mike <ki5mp@DOTDOT.arrl.net>
Message-ID: <B7Us4.255$Ag.7374@news.corecomm.net>
Source record: 85159
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Greetings,

I purchased a nice little HR2510 from an individual and it suffers from low power output. I have replaced both the driver and final transistors and aligned the transmitter section per the service manual. The maximum output power obtainable on CW and SSB is around 15W. The AM output power can be adjusted to its specified output of 10W and FM is also low at around 7W.

In the process of doing some circuit tracing, I noticed some minor differences between the actual main board and the service manual schematic. For example, the service manual block diagram depicts Q134 as a TX AMP, but on this main board there is no Q134 - there is a Q140 and associated biasing resistors in the immediate area instead, for which there is no such component listed on the block diagram or schematic. The board has mounting holes and silk-screening for Q134 and R167, but Q134 is bypassed with a capacitor where the base and emitter leads would normally go.

This may be a dumb question, but is there an "European" version of this radio? This radio was supposedly purchased in the Netherlands while on a business trip and brought back to the U.S. The silk-screening on the main board identifies it as a PB-111AE instead of the PB-111 designation indicated on the schematic. The schematic printed in the owner's manual has the same schematic as the service manual, for a PB-111 main board.

A little more history on this radio may be in order here. This radio was supposedly a 'new' radio but when it first arrived at my door and was tested, it suffered from apparent parasitic oscillations when operated in SSB mode. It operated perfectly on a dummy load, but when hooked up to a real antenna system and modulated in SSB mode, the power output would "latch" ON at full output (about 25W PEP) and not drop back with no modulation as it should. (I might mention that there is nothing wrong with the antenna system - I tried the radio on three different resonant systems with the same results.) I returned the radio back to the individual and he 'repaired' the radio by replacing the driver transistor (Q133). He first replaced the final transistor and this didn't solve the problem, but the driver replacement apparently did. I received the radio back and the parasitic oscillation problem did appear to be fixed, but then I noticed the power output was significantly lower than it was before and the SWR meter no longer worked. Follow up e-mails with the individual yielded no results to my satisfaction but I decided to keep the radio because it is in such good shape cosmetically.

So, I replaced the driver and final transistors again myself and aligned the PLL and transmitter sections per the service manual with no noticeable gain in performance. Digging deeper I noticed the aforementioned minor circuit

differences (and there may be more.) I have a sneaky suspicion that this (or the original) problem may be related somehow to the SWR detection and/or automatic power cut-back circuitry. As I mentioned, the SWR meter no longer works

Is there anyone out there that has a schematic for the PB-111AE main board and/or any suggestions?

Any input would be appreciated. I apologize for such a long post...

That is the bottom line. If you do a search on DejaNews, or see warnings about the person on the newsgroups...you can avoid the deal altogether.

> Besides, why would I want to send money to a total stranger? When I
> buy from an established company, there is something more substantial on

Absolutely true...even checking out the references of a person or business is not a guarantee that the deal will go smoothly.

> Unless you do a lot of business, the situations you describe above are
> very rare. I've done business with UPS and FedEx for years and have
> only had problems a couple of times (usually circumstances other than a
> straight transaction involved).

I mostly deal with UPS. FedEx has been problem after problem at work (Police Department) and at home. My department will no longer deal with FedEx at all.

> You're claim that a person can file a "fraud complaint with the Postal
> Inspectors" really would make me nervious dealing with you.

Why would you be nervous dealing with me, you don't even know me? I have completed hundreds of deals over the internet without a problem. Why are you prejudging me without dealing with me?

> If you know
> as much as you suggest, than you should know that no investigation is
> launched unless large amounts of money are involved or a history of

> complaints exist.

That is not true. I deal with the Postal Inspectors on a regular basis as a police officer and they are very cooperative. Local/State police agencies on the other hand will not get involved unless it is thousands and thousands of dollars, and even then we won't get too involved. Extradition is very expensive, but not for the Federal Government.

> Therefore, to hide behind this to justify your
> business practice of accepting only money up front, when you know that
> nothing will be done if the person complains about you (assuming you did
> rip someone off), clearly suggests to me that I would not want to do
> business with you.

I'm not hiding behind anything, if you choose not to do business with me that is your choice. I have never ripped anyone off and have been burnt twice, but I learned after being burnt. Those people have paid for their bad dealings with me, and that is how it should be.

Piero

5220. Yaesu FT-50R vs Motorcycle

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-23 00:00:00 UTC
From: Mark Erbaugh <mark@nospam.microenh.com>
Message-ID: <38b4176c$0$1373@news.voyager.net>
Source record: 85162

I just purchased a Yaesu FT-50R 2m/440 HT. One of the intended uses is on my motorcycle. Looking at the unit, I like the way the 'clamshell' battery mounts to the radio and I came up with an idea for mounting and possibly powering the radio while on the bike. Is it possible to rig up a mounting on the bike that would mate with the radio the same way the battery does? I could install the mounting securly on the bike, and use the battery latch as a quick release to remove the radio.

Two questions:

1) Is such a mounting kit already available? Since I just purchased the radio, I don't have any dead battery packs to cannabolize.

2) Can the radio take 12v DC through the battery contacts? The highest voltage battery available is 9.6v, but the radio has a jack for 12v

First - Did you go to Alinco's web site? You can down load and print alot of that stuff right from there. If not, and if the radio has the removable front panel like the DR-590, then the adjustments are probably on the back side of the control head.

5223. A question regarding ground rods

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-23 00:00:00 UTC
From: w5mec@my-deja.com
Message-ID: <8917j6$5ok$1@nnrp1.deja.com>
Source record: 85165

Question: Where might I find *real* 5/8" ground rods? I've been to all the local hardware stores and their 5/8" ground rods aren't really 5/8" OD. The 5/8" ground rods they carry are approximately .560" OD. A real 5/8" OD ground rod should measure .625" OD.

Basically, I have a bulkhead mount for some coax surge protectors (purchased from Industrial Communication Engineers). The bulkhead mounts on the top of a 5/8" ground rod. The mounting hole in the bulkhead is .660" in diameter. When placed on top of a *real* 5/8" ground rod, this gives a nice .035" to .040" fit. On top of a sub-par 5/8" ground rod, it gives a sloppy fit of .100".

I realize that I can split a piece of copper pipe and make a bushing to tighten the fit. However, that introduces more resistance...which is exactly what I don't want.

Any suggestions? I'm all ears.

Tnx es 73 de W5MEC

Hello Everybody.

A friend of mine did the FT90 Mars/cap mod by removing the resistor and performing a Master CPU reset. Now, his FT90 doesn't have any squelch control.

In other words, the squelch is open at any setting, including full.

Has anyone else had this happen to their FT-90?
What did you do to get the squelch back?

I told him to stick the resistor back in and reset the CPU and see if the squelch comes back.
Also, look for any solder bridges while in there.

US Tower makes self supporting tower masts. Check them out. Get a catalog
from AES, they have a nice section.

My first tri-band -- TA33JR -- was put on a radio shack mast --- I did guy
it and it worked for years. Just remember to break up the guys in non
resonant lengths.

If you don't have room for the guy wires -- look at the US Tower poles.

What I have now is a rooftop tower from Glen Martin Engineering. Since I
have a 2 story house, the 8 foot quad tower (which is superbly built and
desgined -- worth every penny) and 20' mast on it gets my ant up about 36
feet.
it is holding a KLM KT34, a 70cm beam and a Log periodic (UHF/VHF) which is
a lot more than a pole will hold.

Anyway, there are some options.

cheers

From: davem@cs.ubc.ca
Message-ID: <8918l2$6tg$1@newcastle.cs.ubc.ca>
Source record: 85171

"Mark Erbaugh" <mark@nospam.microenh.com> writes:

>1) Is such a mounting kit already available? Since I just purchased the
>radio, I don't have any dead battery packs to cannabolize.

Yaesu makes a "battery separation kit". It has one piece that mounts
to the back of the radio, and another that mounts to the front of
the battery, with a coiled cord in between. Both have clips to
attach them to things. The idea is that you can use the radio
itself like a speaker-mike (it's small and light enough) but have
full controls and the antenna away from your body, while the heavy
battery remains on your belt.

You may be able to modify this to do what you want.

>2) Can the radio take 12v DC through the battery contacts? The highest
>voltage battery available is 9.6v, but the radio has a jack for 12v

Check the radio manual (duh!). I think it can take up to 16 V.
However, you're supposed to use some electronics to provide noise
filtering if powering the radio from a vehicle electrical system;
Yaesu sells a cigarette lighter adapter that does this.

Dave

I have an as new, unused FT100. Bought as backup and it had a problem
out of the box, just received it back from Yaesu, they replaced crytsal
and checked to specs. $900.00 shipped.

yes, it is because of grounding and yes, you need an rf ground.
10 meters is the first band that will exhibit those problems.
you should ground your rig to groundrods outside the shack.
The electrical ground (3rd wire) is not a good RF ground.
Get a copper 8' stake from ratshack at the minimum, and drive it in the ground just outside your window. Use as big a wire as you can get -- copper braid or 1'' copper strap is best, but #10 house wire will work in a short run and connect that to the transmitter AND the tuner's ground

The 2meter ant should be just about useless at 10 meters unless you want local cb type service.

As far as underground -- the rule of thumb for antennas is "bigger and higher is better".

Try a vertical -- should work fine in your situation -- you say it is a long wire, but that really is a multiple wave length antenna so for 10 meters your wire would need to be 60-100 feet long. What you probably have is a random wire.

Get yourself a vertical ant -- use the metal roof of your trailer for a ground plane and it should: A) work quite well, and B) fix your RFI problems. I lived in an apartment that had a metal roof -- put a vertical in the middle of it and worked the world.

cheers

Fred Cole <emeraldj@twcny.rr.com> wrote in message news:20000222.16424597@KIRK.twcny.rr.com...
I have an IC-701 with the IC-701PS power supply. My two antennas are connected through my MFJ Versa Tuner II. From what I've noticed, I can transmit ssb on 10M with one antenna but I don't seem to be able to with the other antenna.

One antenna is an indoor 2m (I know I shouldn't even consider using it for TX) the other is a longwire. It's the two meter antenna that works for ssb. When I use the longwire on 10M I hear a screetch like feedback when I use higher than about 10 watts on CW. Also, when using the longwire, I can't even get the alc meter to even twitch, no matter how high or low I turn the mic gain.

Is this problem caused by a lack of a ground? Or is it just the operator? Since the power supply has a 3 wire plug, the connector to the rig is 3 wire, and the ground lug on the tuner is connected to the ground lug on the rig, doesn't that mean that they are already grounded? Do I need a ground in addition to the apparent house ground?

Since I live in a trailer park, with no nearby trees, I figure that the longwire is my best bet, unless someone else can give me a suggestion on homebrew antennas, I heard about an underground type but haven't found anymore info on them.

Tnx
Fred Cole - N2NRV

Can't do BETTER than a copper bushing unless you use silver -- and you
can't mate that with copper. Concerned? Sweat-solder the bushing to the
copper ground rod. Essentially the same as a proper diameter rod.

Source record: 85177

Skippy (wrangler@northnet.org) wrote:
: I have read the manual that comes with the radio and I'm a little
: confused about the NiCad battery Motorola #NTN7143CR . The confusion
: arose when I read the section about the battery and the ,"no memory
: effect" with this battery .
:
: <deleted>
:
: I'm wondering if anyone knows what if anything Motorola has done to
: their batteries to eliminate the so called memory effect that many
: licensed operators have had to contend with NiCad batteries .

Probably one of many answers, but here goes:

The NiCad "memory effect" is highly overblown and seems to be a
convenient handle for various electronic equipment manufacturers to
better push NiMH or Li-ion batteries (which are certainly better in
many ways, but definitely not better in *every* way).

There are two or three bad things you can do to Nicads: 1) overcharge
them for long periods, and 2) run a nicad battery pack (consisting of
>1 battery cells) down to 0 volts, especially in a misguided attempt
to avoid the "memory effect" by "fully" discharging the battery.
Nicad packs should never be discharged below about .8-1V per cell,
e.g., 6 volts for a 7.2V pack. Also, 3) leave them in a hot car in
summer.

Doing #1 will cause a loss of capacity over time. Until the past 5 years
or so, most chargers were "dumb" and just pumped X amount of milliamps into
the battery. So, if the battery was not fully discharged before recharging,
it was easy to overcharge it, apparently causing a "memory effect" (in this
case, voltage depression and eventually a real loss of capacity).

Doing bad thing #2 is really bad. It can easily cause internal shorts
to form in a cell by reverse charging one or more of the cells. In
essence, although nicad packs generally consist of matched cells, one
cell will probably have less capacity than the others and it's voltage
will drop to zero first, then possibly go negative, i.e., reverse charge.
Once this happens, you can basically kiss the battery goodbye ("zapping"
it with a short high-voltage pulse may fix it for a while).

Most devices now have a low voltage auto shutdown which prevents #2 from
happening.

So...after all this...what's Motorola talking about that's different
about the battery? I don't know for sure, but I'd guess really

nothing, unless it has some built in overcharge/undercharge protection. Most "smart" fast chargers in use today will prevent overcharging the battery, avoiding problem #1. There's also more esoteric evidence or chemistry based arguments that fast charging and perhaps "pulse" charging (versus standard dumb slow charging) prevents crystals from forming inside the battery that effectively reduce its capacity.

In summary, the memory effect does not really exist in the sense that most people think, i.e., partially discharging a nicad many times causes it to lose capacity. That said, some people's empirical evidence does indicate that periodically fully discharging a battery (but NOT below ~1V per cell) seems to keep it running at peak capacity.

If you're interested, I've collected a few net articles and such that I can forward...

5247. Using and AMP in a Townhouse

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-23 00:00:00 UTC
From: Fred G Guiliano <snoopy@wserv.com>
Message-ID: <951350767.239493@dew.wserv.com>
Source record: 85189

Has anyone ever used an HF amplifier in a townhouse? I'm contemplating the idea of getting Ameritron AL-811 or 811A (600 or 800 watt output). If I run the amp directly to the electric box then give the amp a good ground, I was hoping that would cut out some possibilites of interference. The entire neighborhood runs cable for TV but of course there are the cordless phones, and stereo equiptment I must deal with. Anyway, has anyone ever tried using an amp successfully in a townhome? BTW, I have an end unit if that makes any difference.

Thanks,

Fred NG3J

I would arc weld it myself. Silver solder could fly like melted butter
if large strike currents flow thru it.
Solder is bad practice in any lightning mounting. It'll eat your lunch
if used at the tower. Of course, at the shack bulkheads the currents
should be quite reduced if the tower/antenna etc is grounded well, but
I'd still want to weld them. MK

> KG4FDR
I'm sure this will clash with many's thinking, but I don't use a shack ground any more. I DO have a safety ground for the gear, but this is only the ground pin from the 240v to my amp. When the amp is plugged in, The gear is grounded in that respect. As far as an "rf" ground, it's really not needed if you are using an antenna that is ground independant, or has a ground connection at the antenna. IE: radials. etc. If this is the case, there is absolutaly no need to have an rf ground in the shack. I quit using one about 6 years ago, and I haven't missed it yet. And I have LESS "rf" problems in the shack without it. If you have rf problems in the shack, that means you have an antenna /feedline problem. Adding a ground will not cure this. It might "patch" it, but it doesn't deal with the real problem. So anyway, if you are using any normal antennas like dipoles etc., you don't need a ground. But you DO need a safety ground to protect for shock. This can be as simple as using a grounded power outlet for your rig, power supply etc. A 12v rig on a battery doesn't need a safety ground. But anything that plugs in the wall does. Or should anyway. Anything with high voltage power supplies ,like old tube rigs, ABSOLUTELY must have a safety ground. Trust me on this. I've been shocked with 1050v from an old HW-100 when the diodes went kaput, and I touched the ungrounded chassis. It was not fun at all.I learned my lesson on ungrounded tube gear. MK

Problem with welding... you get a weld ony at the beads. Soldering, you
spread things out.
Correct, solder will have more resistance than a similar volume of copper.
Less than just inserting a shim, I think.

Would a soldered connection be superior to a clamped one? How much inferior
to a correctly sized ground rod would a shimmed-up one be? How good does it
NEED to be? And... why not adjust the bulkhead clamp to allow it to work
with a slightly smaller rod?

Go out and locate one of the local power company line
crews. See if they would consider installing a short pole
in your yard, if you have the room. Sometimes you can get
the crew to do the job on the weekend and use a pole that
was broken off at the top or some thing along that line.

Icom 781 HF rig with built in tuner,built in scope,built in power
supply. 150Watts, Does full
power, I put it on a dummy load and it puts out 150 Watts. Comes
with Manual,Power Cord.
No original box and no mic comes with it. This rig works 100
percent
and the scope is nice and bright. The metal cabinet that goes around
it has a few touch ups on it.
The serial number is: 01779 As I stated, everything works
GREAT. Of course this would be double boxed
and packed well.

Price: 2,675.00
You pay shipping

>KG4FDR

Use a couple of ground rods if possible and braided wire for the hook-up.
Bond everything in the shack to the ground braid (tuner, rig, power supply,
etc). Regular stranded wire will work in many instances, but braid's
better... the heavier the better, too. (if stranded, no less than #8). Your
local builder's square will have the ground clamp you'll need to attach the
braid to the rod.(solder it too, with a torch if you can)

Posted on behalf of Frank Lenze VE2LNZ
flenze@captelco.qc.ca

Frank has a almost-Mint, still in the original box FPM-300, which he'd like to get operational. Seems this rig has a small problem -- one of the mixer coils became damaged during an initial check-out (???), and because of this, the rig has never seen use. Frank picked up the rig several years ago from the distributor.

The part in question is the 9Mhz coil used in the mixer stage.
Part# 050-004358 Ref.Symbol # T405 Desc.: Coil, IFT, 9 Mhz.

Anyone have a parts unit, or possibly an equivalent part?
Or possibly a source of a suitable replacement?

You can contact Frank, VE2LNZ at 450-688-5173,
email: flenze@captelco.qc.ca

Mathew,

I agree with AL. But just remember, he said 'most HAMs'. HAM radio
is nothing more than a cross section of society. In some cases, there
are a higher percentage of certain types of people, but basically you
get all types. Including those that will assume the worst and be
idiots.

But there will also be a lot of people who WILL welcome you and
smooth your path if you decide to get that ticket.

Just as there are "*" in society, there will be "*" in HAM radio.

Remember, a bike electrical system may not be regulated that well...
Engine RPM may cause the voltage to vary much more than you'd
expect if you're only considering a car system.

I wouldn't want to risk the radio. And it's so easy to just make up a
feed
with a 78xx regulator or whatever voltage you want.

I have a Kenwood 2M on my Interstate, but that's already a mobile unit,
so I'm not too concerned about voltage like I would be with an HT.
Although I am in the process of figuring out how to wire more into a
single 'comm panel'. When I'm done, I'll have a single system that
will have the 2M, FRS, and Cell phone into the intercom.

Dave,

I went through the same thing with my 930 and back in the late 80's Kenwood was sending out a small (brass-?) piece of spring stock to mount against the shaft of the fan to quiet it down some. It didn't really work and I too went to the small muffin/computer fan approach with good success. I used double stick tape to easily mont it. The PS area of the 930 is a real heat generator and I wired my fan to be on all the time. It's quiet and not a problem and may save component failure down the road. My 930 has been flawless since new, but it is a very high SN and one of the last ones made.

Brian

Hmm, invest in the Gordon West no-code book first. Take it home, do some studying. Then call
around and find out when the next VEC testing is in your area. Then go take the test, pass it, and get
you license from the FCC. Then I'm sure you'll have no problem communicating.

Hello Everyone,

I have the following for sale. I have revised and updated this list which was posted previously. All items are in very good condition or better. Payment by US Postal Money Order, prepaid only. Prices include ground shipping by UPS, CONUS. If interested, please e-mail n3fvg@worldlynx.net

ICOM IC-03AT 220 Mhz. HT package. IC-03AT with BC-35 Desktop Charger, brand new BP-7S battery, BP-8S battery, IC-DC1 mobile adapter, Icom Speaker Mic, manuals, standard accessories and boxes. Like New.$ 250.00

BEARCAT BC-3000XLT handheld scanner, 25mhz. - 1.3ghz. (less cellular but receives "cell images"), rubber ducky, ac adapter/charger, battery pack just rebuilt, instruction manual, VGC..... $ 200.00

Radio Shack PRO-2026 mobile scanner, Model 200-148A, 29mhz.- 956Mhz., INCLUDES CELLULAR. Excellent condition, like new, with AC adapter, manual and brand new mobile mounting bracket/hardware. $160.00

Hewlett Packard HP4L Laser Printer. Excellent condition..... $150.00

5279. My next radio

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-24 00:00:00 UTC
From: john@neknetwork.com
Message-ID: <38B56408.FE1AFD2@neknetwork.com>
Source record: 85008

Hello all,

I got my ham radio start last year as a Tech+ op in Nov. My first rig is an Icom 701 that I bought from someone over the net. The radio has been great, I'm really enjoying it a lot. I'm taking the 13 wpm General test this Saturday (already passed the written, but failed the CW part).

A General ticket has privileges on a lot of bands that my IC-701 doesn't cover. I also wouldn't mind having a 2 meter radio in the house (have one in the car). My main interest with HF is working CW, and I woudn't mind trying out working a satelite in the future.

I've been looking at the specs of new radios, and there is one that seems have all the others beat as far as price and features: the Yaesu FT-847. The 847 seems to have all the features I would ever want out of a rig, and the street price for it right now is like $1500.

My question is; is the FT-847 too good to be true? Is there a radio with more features in the same price range? Why does the FT-847 have so much, yet a price so low?

Thanks, 73's,

John, KB1ENS

ON the OTHER hand, it takes a large helping of "dense" to break into a group - on the air OR in a newsgroup, where the language being used is CLEARLY english, and THEN try to speak in a foreign language! All that needs to be done, is READ thru the group to see what's going on, what issues are being discussed, and WHAT LANGUAGE is being used BEFORE entering! If desperate for needed help, find a TRANSLATOR to assist you, don't expect or demand that YOUR inability be binding upon all others!

IF you were traveling in China, and stepped into a restaurant for a meal, would you become upset because no one there understood your order? Would you expect everything to come to a halt, or everyone to now start speaking English just because YOU were there? What happened to common sense?

Can't speak for others, but *I* would sure avoid breaking into a spoken OR written conversation being conducted in Chinese, because *I* don't SPEAK or READ Chinese - NOR would I then criticise THEM because I considered THEM inconsiderate of MY ignorance...

Takes all kinds...

Many thanks, Mark, but a kind soul found an old EV brochure and got the info out of it for me. I know that I have seen it in old QSTs, but I ran through all my postwar December issues as a sample and could find only the 664.

Turns out the 676 is quite a neat mic with 60 - 15,000 Hz response and -57db output level. Dual impedance, etc. Not at all suitable for DX or contest work, but sure pleasant to listen to according to folks I have worked in rag-chew mode.

I keep getting very flattering reports with it. Of course, the near perfect SSB generation of the Kachina using DSP eliminates most of the distortion that we have come to expect with the usual Oriental SSB rigs.

I think the easy answer is that in the old days cw receivers just injected the BFO on the low side and 'walla!' a standard was decided -- newer rigs just copied the convention. As you say, it really doesn't matter which side you inject the BFO, it just affects the apparent frequency of the tuned signal.

cheers

If you're going to mount it in a fixed place, you could strengthen it
quite a bit by filling it with epoxy. It would become rather heavy
doing this, but that doesn't matter for fixed mount.

I think it's actually sold as an accessory for the Vertex commercial
radios, but apparently works for the amateur ones that share the same
body.

John
From what I've heard talking with hams that own the 847, they love the rig.
This is a 'combo' rig from Yaesu. It replaced thier older ft736 for Sat
work, as well as several single band all-mode v/uhf radios. Guess they threw
the HF in just for fun.

FOR SALE: WORLD RADIO TV HANDBOOK 's

EVERY YEAR from 1976 through 1999 (24 books). All are in very good to excellent condition (1980 edition is fair to good).

Also will include with the set is the 1957 "World Radio Handbook" (before it was the WRTH). Condition of this 1957 edition is fair , but solid.. no pages are missing or even starting to fall out (minor coffee stain). 170 pages.

And also the WRTH "DX GUIDE" , 208 Pages, late summer of 1978 (excellent condition).

As an extra bonus will also include "World In My Ears" by Authur Cushen (very good condition). This book has been out of print for many years.

WILL ONLY SELL AS A SET !!!!! (WILL NOT BREAK UP ANY PART OF THESE - NO EXCEPTIONS !!!!)...SO DO NOT ASK IF I WOULD SELL JUST ONE YEAR , I will not !!!

At this time I'm taking offers on this entire rare "SET" (27 books). Please, serious inquires only. But if you have any questions please let me know. OFFER ONLY GOOD IN USA -LOWER 48 !!!! Will not ship outside the USA, or to AK or HI (too heavy and big). NO COD's will need payment before I ship.

Send your offer / or questions to me via e-mail direct, NOT to this news group. Will take offers only until Monday Feb. 28th at 1800 UTC..sharp on this , and of course will go to the highest "lucky" person (however I do have a "min"..value that I must see before I will let these go..so don't make your offer too low if you are "really" intrested)

Regards,
DaveZ

Herr Michael OM,

English is the closest thing to a universal language we have in the
the developed world, particularly in dealing with technical terms, and
is the most common second-language of most countries. Posting to a
clearly English-speaking newsgroup in another language is not likely to
get the responses hoped for. After all, that person must have read the
newsgroup (in English) before deciding to post to it. Just common
sense, yes?
I would guess that the language spoken by the largest percentage of
folks on earth might be Chinese.

Don, W6JL

The same is true for posting English an a clearly non-English newsgroup.
Unfortunately most native speakers of English fail to understand this.

Fred,

Aside from the possibility of TVI/RFI, you'll probably exceed the limits set for exposure to non-ionizing radiation to you as well as your neighbors. Sorry, can't remember the exposure limits or reference any documents here from the salt mine. I lived in a rowhouse/townhouse 10 years back, and used 2kw on occasion to a 3 element yagi to bag a hard one. TV reception was literally obliterated when it was used. If you go with it, I'd use it very judiciously or you're likely to have the neighbors standing outside your house with burning torches and pitchforks ;-)

Tom

You need a complete antenna. The longwire you are using requires an rf ground to function correctly. I would put up a dipole, vertical, whatever that is complete and has it's own rf ground system. A dipole is complete in itself and needs no ground. A vertical needs a ground radial set, or at the least a connection to a ground rod at the base of the vertical. With the longwire you are using , you are feeding the whole thing from the tuner on, so you have loads of rf in the shack. This is the antennas fault, not really from a lack of grounding at the rig, but a lack of an rf ground for the antenna. You really don't want the rf ground for the antenna to be at the shack. You want it at the antenna. So switch to a dipole, or a vertical with grounding, and your problems should go away. With the right antenna, a ground at the shack is really unnecessary as far as rf grounding, but you could use one if you feel compelled. I don't use a shack ground anymore. And have no rf problems on any band. Mainly because rf in the shack is an antenna/feedline problem, not from lack of grounding. Grounding is a "bandaid" commonly used to try to fix other problems. One example is camping and running portable, I've never once used a ground ever, and have never ever had rf problems portable, because I use complete antennas. Usually dipoles strung from trees. MK

I see no reason why it shouldn't be OK to use German language on an intenational newsgroup, and - particularly when the title is written in German

I've been critized for requesting more German bulletins on packet radio to @EU, and this is mentioned in a Dutch bulletin I discovered the other day. This is particularly good when you get bored that most English bulletins has little interest, perhaps some more interesting notes if we allow German language messages.

It is an international group, and as I am particularly interested in German equipment in contrast to the Western rubbish it might be a chance to have some more information about this

German language is understood in most countries in Europe, so I really do not care whether some silly americans understand or not, most of them understand only one language, while most of us in Europe (outside England) understand at least two and very often three or more languages

I guess for the same reason some electricians I know dump a handful of rock salt into the hole. They claim this promotes ion exchange between the copper and the soil, supposedly lowering resistance.

Hello, 73 from Jose CT1FKN

I Have one Icom IC706MKIIG Spanish version and
that rig only RX and TX into the amateurs bands
Please do you know any mod to change or open
RX from 30KHz to 199MHZ and from 400 MHz to 470MHz
like i can read on instruction manual

I woud like rx outside of amateurs bands but I can't

Many thanks in advance

I got out the magnifying glass and looked at the schematic. The 12v input jack has a Zener regulator on it that the battery terminal input doesn't use, so it looks like I need to regulate things anyways, if I want to use the battery terminals.

Good luck on the comm panel.

I have had my FT-100 for over a month with no problems what so ever. The radio
works like a champ and I highly recommend it. If it was $200 more than the
706mkIIG I would still get it. Since it sells for $200 less it is a steal
compared to the Icom. The DPS works great and the noise blanker actually works
on the FT-100. The ATAS-100 antenna is the best part. It is a screwdriver
antenna that automatically tunes itself so no more taking your eyes off the
road to see if your antenna is tuned up. It is the perfect mobile rig. If you
are wanting a new radio for the house, I would look at the FT-847. It is an
all mode HF, 6 meters, 2 meters and 70 cm radio built for HF and satellite
work on 2 meters and 440. Kenwood and Icom have a lot of catching up to do as
far as a do everything type of rig.

I used the braid from some RG-8 coax to ground all my equipment together, then
used a piece of 8 guage stranded to ground to the rod. This is not by any
means complete. I have since obtained a copper strip to which I will ground
my equipment, and then ground the strip to the existing ground rod, and
hopefully install one or two more rods. Grounding is inexpensive, you really
have to go out of your way to make it expensive. Use more than one ground
rod, use the largest, heaviest copper wire you can find and make sure that all
the connections are tight, you'll be all set...

Matt,
The last thing that most hams want to do is discourage you away from ham radio. I'm sorry that
you received nasty e-mails. The 30 mile range is testing the limit- if you have flat terrain, decent rigs,
and resonant antennas, you stand a good chance for communication.
If you are in a noisy, hilly environment, you may have a problem without the use of a local repeater.
In my area of NJ, it is difficult to support a direct 30 mile range with mobile setups.
Local amateur radio clubs can help you study for the test and get you set up.
Good luck.
Al

5322. Wanted: Heath HW2P HT CTCSS Tone Board and PTT switch

I can't tell you where to find alternate ground rods, but the bulkhead bus can be mounted to a wall or whatever (use insulated standoffs) , and a #4 stranded copper wire run from the ground rod (using standard clamps) to the bus plate (there should be ample holes..or you drill one) where you install a stainless bolt and use round lugs to bolt the ground wire to the bus. Round lug should be crimped then soldered. Put No-Ox-It or similar compound on all connections before tightening. Works fine and will be an effective low-impedance ground.
Good luck

I agree with those who suggested the Polyphaser "strap". However, I needed to get something locally, so I went down to the hardware store and got a 5' piece of 3/4" copper pipe. I have a 3" dia. PVC pipe coming into the shack so I just stuck the copper through the PVC and that was it! In the shack end I drilled holes in the pipe, put in machine screws as studs and connected ground wires from the equipment directly to the studs.

A note about ground rods-
My father-in-law was a Bell system installer for many years, and he was instructed that standard
Bell System Practices (BSP's) recommended that when installing a grounding rod, you properly prep the rod and ground hole. Translation- drink plenty of fluids, and release some
salty fluid at the apparatus if nobody is around to witness it. Standard practice in the 60's.

The BP-8, or equivalent.

Maha, Pryme, The Nicad Lady, and others have them for you.

For protection of your investment - please also purchase a NiMH battery charger. Since NiMH cells/packs will not last as many discharge-charge cycles as modern NiCads - it is especially important to properly care for them.

The Maha MC-C777a is an excellent unit. It will properly charge just about any 4.8V-to-12VDC NiMH -or- NiCad pack you'll encounter.

You might consider improving your antenna instead. For less money than an amp, you can achieve the same gain on both xmit, as well as receive, with a better antenna. Ask your neighbors which they would prefer, a more sightly antenna or RFI ...

(However, the fact that you are in a townhome may preclude any reasonable solution...)

73 and good luck,

Dan - W6DKN

I think one problem is the solder melts at a fairly low temp. A weld
pretty much becomes part of the piece. It won't melt apart like solder
will.
>
> Would a soldered connection be superior to a clamped one?

I would think clamped is better as long as it's an approved clamp for
the purpose.

How much inferior
> to a correctly sized ground rod would a shimmed-up one be? How good does it
> NEED to be? And... why not adjust the bulkhead clamp to allow it to work
> with a slightly smaller rod?

I don't think would really matter as long as nothing can come apart. If
the solder melts, you lose your connection and then you really have your
pants down as far as repeat strikes. This is grim news on a tower
ground. Probably less of a problem on a bulkhead, but I still wouldn't
want to take chances. MK

Look to the right of the HT in the right-hand side of the screen. You'll see a pull-down menu, and right next to the menu is a rectangle where if you click it, it'll allow you to change the virtual jumper. I believe you want the boxes underneath this menu though, and if hovering your mouse over them you'll notice they reveal Full/RX, Full/TX, and MARS/CAP enabling.

From: Bill <kg8aw@ismi.net>
Message-ID: <38B520C1.6ADEC907@ismi.net>
Source record: 85136

My ham gear is on the second floor, so my distance to a good earth ground is about the same distance. After trying many different wire gauges and braid strap, I found the best grounding for my station was to use a 6'x 5/8" copper ground rod. Then used 3/4" copper water pipe to make the run from the ground rod up thru the side the house and across to the ham equipment. I installed the 3/4" copper pipe over the 5/8" ground rod, crimped the pipe to the rod as best I could then soldered pipe to rod. At the shack end I use a separate 1/2" ground strap from each piece of equipment to the 3/4" copper pipe and solder the strap to the pipe. I no longer have any grounding problems.

5341. Problem with Uniden HR2510

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-24 00:00:00 UTC
From: Mike <ki5mp@DOTDOT.arrl.net>
Message-ID: <CF9t4.372$ak5.13590@news.corecomm.net>
Source record: 85138
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.cb,rec.radio.swap

Greetings,

I purchased a nice little HR2510 from an individual and it suffers from low power output. I have replaced both the driver and final transistors and aligned the transmitter section per the service manual. The maximum output power obtainable on CW and SSB is around 15W. The AM output power can be adjusted to its specified output of 10W and FM is also low at around 7W.

In the process of doing some circuit tracing, I noticed some minor differences between the actual main board and the service manual schematic. For example, the service manual block diagram depicts Q134 as a TX AMP, but on this main board there is no Q134 - there is a Q140 and associated biasing resistors in the immediate area instead, for which there is no such component listed on the block diagram or schematic. The board has mounting holes and silk-screening for Q134 and R167, but Q134 is bypassed with a capacitor where the base and emitter leads would normally go.

This may be a dumb question, but is there an "European" version of this radio? This radio was supposedly purchased in the Netherlands while on a business trip and brought back to the U.S. The silk-screening on the main board identifies it as a PB-111AE instead of the PB-111 designation indicated on the schematic. The schematic printed in the owner's manual has the same schematic as the service manual, for a PB-111 main board.

A little more history on this radio may be in order here. This radio was supposedly a 'new' radio but when it first arrived at my door and was tested, it suffered from apparent parasitic oscillations when operated in SSB mode. It operated perfectly on a dummy load, but when hooked up to a real antenna system and modulated in SSB mode, the power output would "latch" ON at full output (about 25W PEP) and not drop back with no modulation as it should. (I might mention that there is nothing wrong with the antenna system - I tried the radio on three different resonant systems with the same results.) I returned the radio back to the individual and he 'repaired' the radio by replacing the driver transistor (Q133). He first replaced the final transistor and this didn't solve the problem, but the driver replacement apparently did. I received the radio back and the parasitic oscillation problem did appear to be fixed, but then I noticed the power output was significantly lower than it was before and the SWR meter no longer worked. Follow up e-mails with the individual yielded no results to my satisfaction but I decided to keep the radio because it is in such good shape cosmetically.

So, I replaced the driver and final transistors again myself and aligned the PLL and transmitter sections per the service manual with no noticeable gain in performance. Digging deeper I noticed the aforementioned minor circuit

differences (and there may be more.) I have a sneaky suspicion that this (or the original) problem may be related somehow to the SWR detection and/or automatic power cut-back circuitry. As I mentioned, the SWR meter no longer works

Is there anyone out there that has a schematic for the PB-111AE main board and/or any suggestions?

Any input would be appreciated. I apologize for such a long post...

73s
Mike

Hi there.

I have a TL922 by Kenwood and the folowing happend to it:

On Standby-Mode (after some minutes operation) I heard
a loud "bang" . As I looked on the panel the IP-Meter was
showing 500mA. Remember the Amp is set to STANDBY
not to operate nor the PTT is hit.

My guess was maybe a missreading so I pushed the PTT
and sended out a short burst via mike. The Power meter
showed that the AMP is delivering about 1000 watts as
normal. Back to standby - the IP reading is still 500mA.

I turned the thing off.

Any Ideas what happend ?
Anyone had a simular problem in the past ?
I am also seeking for a Service Manual to
download or faxpoll.

Thanks for any help !!!

> Yaesu makes a "battery separation kit".

That sounds like just the accessory for the job. Somehow, it isn't mentioned in either the promotional brochure or the manual. Thanks for alerting me to it. I guess a trip to the ham store is in order.

> >2) Can the radio take 12v DC through the battery contacts? The highest
> >voltage battery available is 9.6v, but the radio has a jack for 12v
>
> Check the radio manual (duh!). I think it can take up to 16 V.

The manual mentioned that 13.8V could be applied to the DC input jack on the side of the radio, but no mention of what could be done with the battery terminals. I haven't checked the schematic to see if there is any difference between the battery terminals and the DC input jack.

That's a good idea, and what I'll probably do if I don't come up with a
better solution. I need to get out to the local ham store and check out the
construction of the case - it may be to flimsy if it doesn't have batteries
installed.

5345. Yaesu FT-10/40/50 Speaker Mike plug

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-24 00:00:00 UTC
From: Mark Erbaugh <mark@nospam.microenh.com>
Message-ID: <38b53618$0$1371@news.infinet.com>
Source record: 85142

Does anyone have a source for the plug that mates with the speaker mike connection on the Yaesu FT10/40 and 50 (probably others as well). It looks like a standard 1/8" stereo phone (i.e. Walkman) plug, but there are 4 conductors (i.e. 2 ring contacts) instead of three.

73,
Mark

5346. FS: DJ-580 DUal Band HT Package

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-24 00:00:00 UTC
From: David Little <dalite01@sprynet.com>
Message-ID: <893dfafbb1@nntp2.atl.mindspring.net>
Source record: 85143
Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.equipment,rec.radio.swap

Selling Alinco Dual-Band HT outfit for a friend. I am the original owner; bought it new at the Jax hamfest in 1993. It was packed away for 5 years prior to getting new batteries for it 12/99. I carried it for a few months before selling it, and the new owner never used it until recently.
==========
DJ580 Dual Band HT by Alinco - Wrist Strap, Belt Clip and bottom battery cover for using with external power. 0007217 Serial number. Some Scuffing on case , all numbers on keypad clearly visible with no fading. Top dust cover for Mic and speaker connections complete and in place. Side dust cover for DC IN complete and in place. No Manual; Downloadable version available of the re-written manual made available electronically to replace the poorly written and translated original manual that came with the 580 in the first year production.
==========
(2) 12 Volt Battery Packs - EPB-22h for Alinco 12 Volt 1000 MAh Nickel Metal Hydride Batteries (2) for 5 watt operation. These are both less than 3 months old and have seen very little use. From E.H. Yost Company 12/99.
==========
Alkaline Battery Pack - Uses 6 AA Alkaline cells - Case has one of the alignment "ears" broken, but still locks shut with no danger of coming apart in use.
==========
Stock Charger - EDC-24 NiCad battery charger with outputs for 8.7 VDC @ 70mA and 14.5 VDC @ 70mA Desktop Style charger.
==========
Rapid Charger - EDC-34 Rapid Charger with 110 VAC and 12 VDC inputs; both cords detachable. Includes AC power supply. Output 13.4 VDC @ 920mA. Red LED for CHARGE, Green LED for COMPLETE. Desktop Style Charger
==========
DC power cord with high current cigar lighter plug and coiled cord. Has LED to show when it is receiving power. Can be used with rapid charger for charging while mobile, or can be directly attached to the side 12 VDC input on the HT for mobile use. The bottom cover plate is included to insulate the battery contacts while using HT with the external DC input feature.
==========
Stock Antenna - EA0021 Alinco VHF/UHF Antenna
==========
ANLI RD-78H Dual Band High Gain antenna
15" high 0 dB on 2m, 3.2 dB on 70cm VSWR less than 1.5:1, 5- watts ax, 50 Ohms, BNC connector
==========
Alinco EME-11 VOX/PTT Remote Mic - Clip-on control box with Mic and earbud cables attached, as well as Mini 2 conductor and sub-mini 3 conductor plugs

for connecting to top-panel of DJ-580. Control box has 3 position slide switch (recessed to prevent accidental access) for ATO, VOX and PTT. Also has recessed VOX/MIC Gain pot and PTT switch for manual operation. It has a swivel clip with 8 positive positions in a 360 degree arc. The remote Mic has the same clip-on arrangement; swivel with 8 positions. Earbud will need foam cover - available at Radio Shack.
==========
Realistic 19-310 Clip-on Lapel Speaker Mic with coiled cord. Has molded connector for attaching to top panel, with jack for an external speaker.

Date: 2000-02-25 00:00:00 UTC
From: stinson108@my-deja.com
Message-ID: <896pii$7rt$1@nnrp1.deja.com>
Source record: 84898

Does anyone know if YAESU supplies a cigarette lighter adapter cord that will: (1) Power the HT during operation and (2) Charge the battery while it is plugged into the lighter socket? If so, what is the model # that I am looking for?

Can such an adapter be used with a 12 volt car battery, or does it require the 13.8 VDC provided by an auto electrical system?

Has anyone received their new SERA Journal yet?

Would someone who has a spare 250 Ohm carbon pot, sell it to me?

I can't find any antenna dogbone insulators (except for the glass ones on EBAY that the antique dealers are biddin $8 each for). Can I just use some PVC pipe for insulators?

I don't have any probes for my Eico oscilloscope. Does anyone know how I might build a feeder box/ lead wire adapter to monitor my rf signal? (I bid 12.75 for a set of 3 Eico probes, but the final selling bid was 112.75!!!!) Think I'll just try to make my own if I can get some information on what is inside one of them.

In erecting a wire center-fed dipole, it becomes apparent that it would be easiest to use existing supports (trees) that are arranged in kind of a "V" formation. Does a dipole need to be a straight shot for both legs, or can they have an apex at the center without serious problems? (the point of the apex would be oriented toward the south-west.)

Thre isn't a lot of ham around here, so the NG's are about the only place I can talk about this kind of stuff with people who have interest in it. My wife and neighbors don't understand why I like my radio.

Anyone here have experience with one of these? Is the vfo supposed to feel like it does, it doesn't seem to operate smoothly. I see nothing obviously wrong, so maybe its operating correctly? Seems to run smoothly for 25kc then tightens up. From that point you can turn the vfo smoothly 25kc back and forth from the direction you started from. I am trying to convince myself it is working properly. There was a product review in QST in I think 1978. Anyone look this review up and see if it says anything about the vfo tuning? Please respond by direct email, thanks.

Have you tried calling Alinco, maybe you can get a new mic, like the one for dr-112. Also any Kenwood mic should work on it. The DTMF encoder is built into the mic I believe.

>the battery terminals.

Take another look. There's no zener regulator on the external input
jack on mine. Incoming power is connected to the main internal B+
bus though a diode: D1022 for external power and D1023 for battery.
These just prevent cross-feeding from one input to the other.

Or are you thinking of D1021? Yes, it's a Zener, but that's part
of the constant-current source (along with Q1035) which provides
the charge current for the battery when external power is connected.
A current source is used so the battery charge current is constant
whether the battery is 6 V or 9.6 V and whether the input voltage
is 12 V or 16 V.

But for just providing power to the radio, there's no difference
between the battery terminal and external power jack.

#1, the discussion quickly degenerated into the seeming pointlessness of addressing a clearly ENGLISH usage group in a foreign language - not likely very many would do so in a group setting at some social event - so why assume it to be correct here? There ARE other means to post here for those not speaking the language - an interpretor is only one of those - and common sense and courtesy would seem to dictate that it is the one SEEKING the info to attempt to conform, NOT the group!

I would certianly consider it RUDE and INCONSIDERATE for a foreign guest at a group function to barge into a cluster of individuals involved in animated conversation in ENGLISH, and then proceed to join in the conversation in Russian!

This "discussion" isn't so much aimed at the guy making the original post, but rather, those who seem to think his method is just jim-dandy!

#2, since you are NOT (apparently) a citizen of the US, YOUR opinion of our social behavior, Constitution and civil laws here has NO relevency - you are totally free to allow YOUR government as much control over you and your society as you choose - and we fully expect that YOU recognize OUR right an freedom to do the same with OURS! If our behavior, freedoms and laws cause you distress, you had best stay

home...

And for the record, it has LONG been illegal for one individual to murder another by ANY means in this country - and yours - but that certainly doesn't seem to stop murders from occuring here OR there, does it!

Maybe MORE laws will do the job?

Yeah, SUUUuure they will....

Heh - I used to run a KWS-1 (barefoot) on CW in a 19 unit apartment
house in San Francisco back in the mid 60's. One day I decided to
try 15 meters SSB, and everytime I talked the floor would shake.
I have a pretty deep voice and it seems I was getting into the neigh-
bor's stereo in the apartment below me. Needless to say, I avoided
15 SSB.

The best way to run an amp in a shared facility is to keep your identity
a secret (don't let on you're a ham), remove your call letter plates
from any autos and don't be seen on the roof stringing #24 wire with
button insulators. As for the lights blinking, blame it on some
neighbor's faulty iron thermostat.

OBSERVATION
I am hearing a HUMmmm in my headphones when the rig is first keyed and on each key closure for three or four characters. I also noticed that the power output starts off a little higher and drops a few watts as the hum goes away.

QUESTION
Could this be a function of the capacitive power supply filter on the final plate supply? No choke, just caps.....

Should I be concerned???

It would lower the resistance by creating a high ionic strength in the
surrounding soil. The ions are the charge carriers when moistened by
groundwater (or recycled coffee...) Good contact between the copper and
the soil matrix would then facilitate dissipation of large currents.

Thanks, Colin.
Alinco says either to send them the radio or contact a dealer for
the mike.
Kenwood mic sounds like a lively alternative.
Neil, AB4YK.

5366. reseptical info for FP-1030A

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-25 00:00:00 UTC
From: wiseguy <alphacentauri@i-plus.net>
Message-ID: <sbeceqhtr2a82@corp.supernews.com>
Source record: 84913

Could someone please tell me where I can find information on the web about how to install a 30 amp receptacle from my breaker box to my power supply so I can get it up and running? I would like to do it myself because an electrician is expensive around here. Also do any one know if I could have caused any damage to my FT-920 by plugging my power supply (FP-1030A) up to a surge protector that can hold only 15 amps (had it on for only about 20 min.). If some one could tell me the answers to my questions it would be very appreciated. Thanks, Sam alphacentauri@i-plus.net

>battery while it is plugged into the lighter socket? If so, what is
>the model # that I am looking for?

You want the Yaesu E-DC-5B. It provides enough current to transmit
without a battery (unlike the 120 VAC adapter supplied with the radio).
If a battery pack is connected, it is trickle charged by the radio's
internal 60 mA charger.

> Can such an adapter be used with a 12 volt car battery, or does it
>require the 13.8 VDC provided by an auto electrical system?

The E-DC-5B is rated for input voltages 12-16 V. It also notes that
there is about 2 V drop across the adapter at 2 A. The adapter and
radio would almost certainly operate below 12 V as well, but with
reduced maximum RF output. (The radio operates down to about 4 V).

Contact your local freq coordinator for info...or look in a recent
copy of the ARRL Rptr Directory to get a prelim idea of any other
rptrs in your area....other than that, there likely wont be a problem
as 1.7 Mhz split is not widely used in your section of Canada yet
(but its growing from the west!)

You've lost your bias voltage - the tube will draw excessive static
plate current without proper cutoff voltage, but WILL still operate when
drive is applied. Sounds like either the diode rectifier(s), or the
filter capacitor in the bias supply...

Take a good hard look at the Icom 746 - 160-2 meters, 100 watts out on
ALL bands, and has an excellent builtin antenna tuner - the 847 does
not!

The answer depends on what you're looking for sensitivity or audio quality.
For sensitivity you probably want something with a synchronous detector.
You might look at the web page at http://www.rnw.nl/realradio/rx_sort3.html
for some ideas.

Message-ID: <ilmbbsgqutuatcv05k10mft6bi0thp5a8c@4ax.com>
Source record: 85055
Body handling: HTML body converted to readable text

I used the level converter / cable assembly supplied with the Icom
IC-T8A software from RT Systems.
The T8A requires a 3-conductor plug; the 706MkII uses a 2-conductor
plug. A simple 1/8-inch "stereo-to-mono" adapter worked fine.

As for software I've used both the ARCP software and the package from
VE6YP with good results.

Neither is *exactly* what I'm looking for, but until such time as I
can obtain a comprehensive CI-V guide from Icom, they will suffice.

The Amp will put out 1.5 kW on high
power and 900 watts on low power.

Everything is in very good condition
except the plate tuning cap. 235 pf
at 7.5 kW. If I had someone to cut
alum for new plates it would be fine.
Or the time to re-engineer the plate
tuning. Tried a 4 kV cap but when the
wattage got to 900 watts out it arched
again.

Needs someone with time to make me
plate for the cap.

Asking $750 will share shipping but
plate Xfmr must be removed for shipping.

I do have an antenna that can be used but it would need to be strung from a tree. The problem is that the nearest tree is on the other end of the trailer park from me. I do have an aluminum mast attached to the trailer, if I use that I can make a sloping dipole and simply deal with it becoming directional, or the neighbor mowing over one end of it during the summer. My only other option of mounting material is hanging a dipole from 2x4's in the middle of my yard. Which is also why I was looking for information on underground or on ground antennas. Making the antenna is the easy part, it's putting them up in the air that is difficult. I'm going more for ability to hide rather than coverage.

Source record: 85069

Hi,
I've got my hands on a Ranger RCI-2950.
Unfortunately there is NO manual at all.
Does anyone knows where can I download the manual
(as PDF for example) ?
Just by pressing different buttons and turning
different knobs (you know - monkeys and other
dumbs learn this way :-) I think I was able to
"discover" most of available functions, but not
all.
I've got two problems.
The first one is - the knob that is placed just
above the mic plug is supposed to change the
frequency, exactly as the up-down arrows and the
buttons on the mic, but it does nothing (I would
like to say here that BOTH the up-down arrows and
the buttons on the mic DO change the frequency).
Is there any known (typical) problem with it ?
The second one is - sometimes when I press a
button like "SHF" (or "LOCK"), instead of the
required function to be performed a frequency
change happens like I had pushed the up-down
arrow. Is there a know fix for it ? (Well, it
doesn't happen very often, but ... I don't like
it. ;-)
(Actually there is a third problem - I need to
replace the battery ... but I think I can easily
manage it myself ... the battery is already out
... and I am looking for a replacement :-)
Thanks in advance,
Jacek.

5402. Cct diagrams for VHF/UHF transceiver needed...please help!!!

Source record: 85070

Greetings to all. I hope that somebody may be able to point me in the right direction. I need to locate some cct diagrams for a simple (ie - compact, few components, few or no switches and dials, etc....just the very basics.) VHF or UHF fixed frequency transceiver. I am required to get a low cost, short range system built for work purposes.

Some of the following may be desirable however: Digital signal tx'ion, and the ability to include a simple encryption/scrambling option.

If any one can point me in the right direction, or can supply me with the cct diagrams, I would be grateful.

Kind Regards,
Lachlan McGraa.

I tried tuning my 10m beam to 11m and it works fine.
When tuning, key down with full power in CW mode.
If it still fails, try another radio on your coax/antenna setup.
Good Luck
Andrew

Just for your information:

At the moment we have the largest computer fare in the world here in Hannover and I just want to tell you, that I never found somebody refusing to questions of our international guests even if most of our citizens speak only very little english. Everybody tries to help as much as he can.

I didn't see anybody breaking a conversation, I just saw somebody asking in his native language, if a SGC 230 is for sale.

From my standpoint it is best to answer not if I don't understand the language.

We don't force our foreign citizens to use the german language in their private communication.

Do you guys in the US do so ?

I'm wondering if you couldn't mount the apex of a dipole on the mast and run eash leg way from it in different directions, instead of a sloping dipole. Can be about any angle as long as not less than 90 degrees. I've used alot of inv vees that were a vee on their side, as well as to the ground. Doesn't hurt them much, and still pretty omnidirectional. Or on the low bands anyway. Not sure which band/s you want , so length would vary. A good vertical could work out ok, but would tend to favor dx over regional stuff. A ground mounted butternut is fairly good, even with fairly limited ground radials and would work all bands. You mention 10m, a good cb antenna on your mast would probably do about as good as anything for that band. Say a 5/8 GP or a 1/2 wave, or 1/4 GP Can be easily homebrewed from scrap tubing. MK

>Correct, solder will have more resistance than a similar volume of copper.
>Less than just inserting a shim, I think.

Soldering is NOT acceptable for ground rod connections under the National
Electrical Code (NEC). Only welding and clamped connections are OK. Under fault
conditions, the solder melts and can even boil.
>
>Would a soldered connection be superior to a clamped one?

Nope. See above.

> How much inferior
>to a correctly sized ground rod would a shimmed-up one be? How good does it
>NEED to be? And... why not adjust the bulkhead clamp to allow it to work
>with a slightly smaller rod?

All better solutions than soldering.

The best way is Cadwelding. (thermite) There are special "One-Shot" cadweld
kits to weld a wire to the end of a ground rod. However, you have to know how
to use them safely. Clamped/bolted connections are the fine if done correctly.

I am selling Svetlana Russian Military matched pairs of the 4CX800A tubes. This is a special purchase group of tubes, and there are very few of these matched pairs left. These tubes are nos, but carry my own 90 day warranty. These tubes have a green indicator strip on the side of each tube. These strips turn brown when the tubes are used. All of these tubes still have the green strip. When these are gone the price will go back to $125.00 per tube. I am selling these tubes as long as the supply last for $190.00 for a matched pair plus shipping. I will ship anywhere in the world. You can call me at 256-593-0164 or preferably just send me an email.

I had one at one time. Sold it because I moved to an apt. and could not put an antenna out.

Pretty good reputation. Some experienced at little drift in the receiver at times but not bad. 10-80 meters- no WARC bands (TS-130 adds that and a few other features). At about 12"W x 5" H x 12-14" D, was considered "small' during its heyday in the early 80's. It's about the same size (or a slight bit larger than) as a TS 430 or a TS 570. Compared with a TS50 or the IC706, it's big.

I've noticed that it goes for anywhere between $250 and $400. For $250- yes. For $400- no.

As always, YMMV.

As you perhaps already noticed from other replies on this topic, the om who posted the initial statement wants to BUY a SGC 230 tuner. He posted his question to several newsgroups linked to antennas etc.

1. I'm german, so I could reply

2. I have a SGC 230 so I could reply, but I don't want to sell it

3. If I wanted to sell my SGC 230, this newsgroup would be about the only way to get my attention since this is the only antenna-linked newsgroup I read in a regular manner.

4. Possibly the sender does not speak english, but since this group is INTERNATIONAL, what from my point of view does NOT exclude GERMAN READERS I don't see any reason why not to ask a question in german.

5. From practical standpoint it is much easier for somebody in germany to buy the tuner from somebody in germany than from somebody in the U.S.

6. Posting the question in english would increase his chances, but posting in german does not put the chances to zero

7. I don't understand all discussion and just want to mention that I didn't notice a similar reaction to the (was it dutch?) "draadantenne" (or similar) posting a week or two ago. Is it the german that bothers you guys so much ? Perhaps you didn't notice it, but WW II is over, Hitler is dead and we are both in the NATO.

8. I hope that US politicians will continue spending some time on thinking how one can keep teenagers from running around with a pump gun and killing their friends in school or elsewhere. If they want to do so, they can do it on the PC.

Ralf

Source record: 85092
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I have a Keypad for a Collins KWM-380 for auction on eBay.

The URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=263640124

and the blurb is

This is a mint-condition keypad for the Collins KWM-380 transceiver.
Enables direct frequency entry from the keypad, storage of displayed
frequency into one of 10 memories, recall of frequencys stored in
memory, and "stepping" through the frequencies stored in memory. The
stepping feature is especially nice for contesting. This is a heavy
metal brute, weighs around two pounds and mounted on a rubber slab so
it stays put on your operating table. Comes with documentation, cable
and connector all ready to plug into your '380 and go. This is in
like-new condition, owned by a non-smoker who rarely used it. I honestly
don't think you could tell it from new. The last time I saw a KWM-380
keypad advertised retail it was close to $300; I don't even know if
they're still available anywhere else but right here on good ol' eBay.

Check my other auction for a KWM-380 SSB filter:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=263661321

Both close 2/27/00.

Thank-you.

Sent via Deja.com http://www.deja.com/
Before you buy.

5425. FS: World Radio TV Handook's 1976~1999 (+57)

FOR SALE: WORLD RADIO TV HANDBOOK 's

EVERY YEAR from 1976 through 1999 (24 books). All are in very good to excellent condition (1980 edition is fair to good).....

Also will include with the set is the 1957 "World Radio Handbook" (before it was the WRTH). Condition of this 1957 edition is fair , but solid.. no pages are missing or even starting to fall out (minor coffee stain). 170 pages.

And also the WRTH "DX GUIDE" , 208 Pages, late summer of 1978 (excellent condition).

As an extra bonus will also include "World In My Ears" by Authur Cushen (very good condition). This book has been out of print for many years.

WILL ONLY SELL AS A SET !!!!! (WILL NOT BREAK UP ANY PART OF THESE - NO EXCEPTIONS !!!!)...SO DO NOT ASK IF I WOULD SELL JUST ONE YEAR , I will not !!!

At this time I'm taking offers on this entire rare "SET" (27 books). Please, serious inquires only. But if you have any questions please let me know. OFFER ONLY GOOD IN USA -LOWER 48 !!!! Will not ship outside the USA, or to AK or HI (too heavy and big). NO COD's will need payment before I ship.

Send your offer / or questions to me via e-mail direct, NOT to this news group. Will take offers only until Monday Feb. 28th at 1800 UTC..sharp on this , and of course will go to the highest "lucky" person.

Regards,
DaveZ

Some further information may be useful for our American friends

In Scandinavia, Germany, France, Belgium, Russia and many other
countries you often find persons having two christian names, it makes
it easier to distinguish between two persons, sometimes persons have
more names - Kings often have a douzen, but they decide which they
want to use daily. So please - in an international newsgroup - try to
understand that is not American rules only applying here!

Jan is a Dutch name, similar to John, Johan, Johannes, Janek etc

In Europe we don't address fellow hams with Mr. or Sir

73
Jan-Martin

Hello,name is Dennis,call is WY3F.
I am interested in hearing from users who use the Kenwood MA-5 ,5 band helical hf mobile antenna.
I was wondering how they do for mobile use on hf,and what the bandwidth is on the 5 bands?
I know that Kenwood doesn't make these any more,but I can only guess that maybe I will run
across one at a ham fest or newsgroups or ebay ect...
Now with all the new ft-100's,706's,MKII,MKIIG,and the Kenwood ts-50 is still being sold .
I know now that they dont make that antenna,I may be hard pressed to find one.
Before I decide this is the antenna I would like to use for mobile work,I would like to hear from
others who may be using the MA-5.
I would like to hear the PROS & CONS on this antenna,maybe send me web sites & pics of
others who are using it .
Any web site or info on hf mobile setups and antennas would be a great help.
Tnx fer taking the time to read this 73 de Dennis
Drive safe!!! while mobile dxing....

Picked one up at a hamfest last summer, one of the best buys I've made. Got it for a second, back-up radio. It is about the same size as my TS-570S(G) and I think it has better audio quality, it just flat sounds GOOD. Ended up using the 570 on the vertical and put the 120 on the beam and have not been sorry. I suppose there are horror stories out there, always are, but if you could find one in good shape at a fair price it could very well be a good buy. You can also get a manual from Vintage Manuals if you get one and it has no manual. Just my 2 cents worth.

die Amerikanern versteht nicht den Unterschied zwischen
Internationales und Amerikanisches NG, sie antworten wie wir nur
Besucher sind am amerikansisches NG mit "American Laws"

rec.radio.amateur.... are international newsgroups, they may be 99.89%
dominated by North Americans, but still they are international NG's.
It seems important to understand that practices that applies to
America are just too often not much use elsewhere.

You may not be aware of the distance between America and other
continents. I is only 500km to Hamburg, but 10 times as much to
America. Trade between the continents isn't just as easy as within
Europe or Germany, parcels are very often badly damaged between USA
and Europe, other difficulties are caused by customs and VAT.

I'm not sure if mean the FT-847 or the FT-840. I had the 840 and felt it was a great radio. As I recall it did have tone encode on 10m FM with the FM board installed. You only need the tone to work through a repeater not for simplex FM. The 840 was my favorite radio and I still regret selling it to this day. My only complaint is that it did not have an optional narrow SSB filter. I have a IC-706 mk II now and would happily swap it for another 840 with the Auto Antenna tuner, desk mic and external speaker, like I once had.

Source record: 84935

Well,

I got the IC-706 mk II. It has HF + 2m and 6m. The 746 is a better radio
but 50% more in price. The FT-847 was a Sat rig first, no other HF rig is.
That's why it has 430-450 and only 50 watts on 2m and UHF. Not much
interest on UHF outsdie of Sats, EME and contests. If you don't mind a
compact radio the IC-706 mk II is the best you can do for under $1,000.

This is the heading in the recent "closing comments" section of Monitoring Times, written by Bob Grove.

It got my attention, as I'm sure I did yours here, or you wouldn't be reading this post.

What intrigued me most about his position was the statistics relative to enforcement action by the FCC as follows :

Of all the license suspensions, revocations or reviews by the FCC in past six months for RULES violations, 85% had passed their MORSE CODE test!

Of the licensees cited for LYING on FCC documents, falsifying call sign apps for non-existent clubs, and taking part in illegitimate testing sessions, 91% were certified as code proficient, with the largest representation being the EXTRA class licensee.

He goes on to exhalt the presence of Technicians in the hobby, and rightfully so.

These stats above cut through all the rhetoric I;ve seen in the groups regarding amateur radio test requirements.

After a hiatus of about a year, I have returned to 2M and 440, to find a veritable wasteland. WHERE IS EVERYONE? I feel like the guy in the British Ariways commercial who asks the same question. However, in this case, all the hams have NOT gone to London!!!

Here is where I think the Hams have gone...

5 or 6 year no-code techs, who represent the last "wave" of new hams after rule changes, such as myself, being restricted to 2M, 440 , and 6M, have become bored with the lack of activity of late. Yacking across town or across the state is nice at first, but grows old with time. Many have simply dropped out like I did a year ago.

The "elders" of the hobby, or Elmers, as the are often called, are acting more like Elmer Fudd, hanging onto old radio values, and silly elitist attitudes, and as we all must do, they are dying off.

brand new candidates who would've been attracted to this hobby in past generations, are on computers, and on the internet where they can not only talk to others in far away lands, but can wave at them in live video, and so on. No CODE required. For that matter, NO LICENSE required.

The 2M , 440, and 6M amateur bands are valuable radio real estate that will be gone, sold off to another Nextel-type company, as a result of our lack of interest.

All because we just can't let go of that damn code....

See you at the museum.

I don't understand why they kept that morse code so long it's so old that
i'd put that in the archaeology department and i'm glad they took'em
out.That is my opinion naturaly... 73 too all of you from VE2AIB

Jou, I myself did several attempts to master CW speed 60.
It became soo boring everytime that I abandoned at tempo 30 or so.
Several times in the last 20 years.
Had my Morse trainer in the car peeping at me during way-to-work,
took Morse casettes with me in the toilet,
listened to beacon blurbs on shortwave,
used computer programs running during cozy evenings with wife,
taking my dog out for a walk with earphones (in my ears, not dog's).

I CANNOT SEE A REASON WHY I SHOULD LEARN MORSE CODE!
Not anymore.

I will not improve my CW skills above tempo 25 or tempo 30
which I would accept as
"Amateur radio emergency communication basic skill"

But I hate and oppose the limiting of access to amateur radio
by preserving inappropriate restrictions .

Hi,
It is normal for the VFO tuning knob, it helps to move fast to the other side of the frequency and then you can fine tune around that frequency. This type of dial tuning is used on SBE-34 as well.
Good luck to you.
de K6hm

As the output power is higher during the hum, it is possible that the
power supply filtering is not being enough for this big power. As it
diminishes filter becomes good.
I'd suggest you to investigate the RF power circuits to see why this
power increase occurs. You haven't told whether it is a tube or
transistor rig but to measure the bias circuit to see whether it shows
any change during the problem is a good idea , I think.

I could never figure out what was so difficult about a 5 WPM code test. Sure
I had to make a few attempts myself but I did pass it at age 14! It just
took some effort on my part. As far as extra class hams acting like children
on the radio, there are always idiots out there. These guys just happened to
pass their code exam. For someone to associate 21 WPM with how someone
behaves is a big leap of faith.

Thanks for the clarification. I was looking at D1021. I do see how it is
connected now. Being able to use the battery terminals for radio power
should make for a neater installation.

Just goes to show you can "prove" anything with statistical hand waving.
For instance, 100% of those offending hams use toilet paper. Maybe the
FCC should outlaw toilet paper.

Oh, you've gotta be kidding. If it is the the beginning of the end the presence or absence of Morse code speed testing has nothing to do with it. It's due mostly to the lack of time to spend on a hobby where you sit for hours and chat on a radio in todays world. That's why Ham radio is still popular in retirement and handicap communities.

Mark, K1MKF

I am an authorized Motorola Accessory & Parts Dealer and can get him new
a new charger and speaker mic. My web site at http://www.kenmitchell.com
has the information. Click on the main menu and go to new motorola
accessories for pricing.

Let me know if I can help.

Hi Norm,
The best way I figure, is to open the back of the mic, and look at where the wires are connnected to. I would figure it's an electret mic by your discription, but opening it up would confirm, and it sounds like you have the PTT to the red wire confirmed. Using the black wire as your ground reference is not usually a good idea, as it just may be the other side of teh mic cartridge. (i.e. green and redd may be PTT, etc.)
Anyway, you didn't mention if you had the wiring connections for the IC725, so here they are in case you dont.
(8 pin)
1- Mic Input
2- +8V DC output (be careful with this one, you can pop a regulator of you short it.)
3- Freq up/down
4- No Connection
5- PTT
6- Gnd (PTT)
7- Gnd (Mic)
8- Audio out.

I sure hope this helps!

- Fred VE7EJ

HAMFEST March 5, 2000 - Lindenhurst, LI

GREAT SOUTH BAY AMATEUR RADIO CLUB & SUFFOLK COUNTY RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST - March 5, 2000

On March 5, 2000 the Great South Bay Amateur Radio Club & Suffolk County Radio Club will again sponsor an indoor Hamfest. The location will be at the:

Knights of Columbus
400 South Broadway
Lindenhurst, Long Island, NY

There will be radio equipment, electronic components, computers and accessories, software, books, technical manuals, ARRL information, Amateur Radio License Exams, Door Prizes. General admission is $6.00.
Free Admission for spouses and children under 12.

VE - ARRL - 12:00 NOON
For exam candidates please remember to bring your original FCC Amateur Radio license (if licensed), any C.S.C.E. forms that are pending, plus a photocopy of each, pens, calculator, formal form of ID (preferably photo ID),
and the examination fee, to the exam session. 1999 ARRL/VEC fee is $ 6.45, exact change is appreciated. Novice exams are free.
The VE team is from ISLIP ARES Group and GSBARC. Thanks guys.

PLEASE NOTE: The VE session will be held at the Babylon Town EOC.
200 E Sunrise HWY, North Lindenhurst, NY.

Vendor information - Walter Wenzel KA2RGI at (631)957-0218.
Email info@gsbarc.org

Talk-in will be via W2GSB Repeater on 146.685 4Z(136.5) PL.

Food Service during the Hamfest will be provided by members of the Knights of Columbus Council.

Information is also available during the GSBARC 2 meter info net every Monday evening at 7:00 pm on the W2GSB repeater, 146.685 -600 4Z(136.5) PL required. You may also write to:

HAMFEST MAR2000

5482. Re: Motorola HT 1000 NiCad Tech Help

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-26 00:00:00 UTC
From: Mitchell Enterprises <mitchenterprises@ix.netcom.com>
Message-ID: <38B80EEF.25480EA2@ix.netcom.com>
Source record: 84964

The memory effect is essentially caused from a chemical reaction inside the battery cell. This chemical reaction causes a cystalline formation inside the cells which will reduce the battery cell capacity thus lower voltage and poor performance between charge cycles. This is a result of the lack of battery maintenance (reconditioning exercising the battery). Battery maintenance should be conducted every thirty days if the battery is being charged several times throughout the month.

A proper battery conditioning exercise cycle will knock down the crystalline formation providing that the crystalline formation does not grow or protrude through the positive and negative separator plate causing a high self discharge (a short). This self high discharge is what will drains the battery in a relative short time after a full charge cycle. If this occurs the battery is no good.

A proper battery conditioning cycle has to be conducted with a battery conditioner and and "Never" by draining battery voltage down by drawing current with a light bulb or radio etc. With most current radios, the voltage will only drop a half volt and shut off and never completely drained a battery to zero voltage. The conditioner cycles between charge and discharge with a load and algorithm that will reconditioned the battery properly to a good condition state providing that the cystalline formation has not bored a hole through the separator plate.

Sometimes after a conditioning cycle a battery will have a high capacity reading because the conditioner knocked down all the crystalline formations thus providing more capacity in the battery cells but leave a hole that the crystalline formation bored through and left it open after the crystallines were removed. This will cause a high self discharge rate (short).

If you do not reconditioned/exercise your batteries they may last about 2 years. They memory effect usually starts about in 12 months and gets worst from that point. Anything after that time you will be on borrowed time. A regularly reconditioned/exercised battery has been known to give optimum performance for up to 10 years and sometimes even longer but definitely longer than the normal 2 years. Each battery is different and has a mind of itself. You never know what one will do but the conditioning/exercising is a must.

This information is backed by several studies that were conducted by the Canadian Space Agency, NASA, US Air Force, US Army, GTE. There is a book titled "Batteries In A Portable World" by Isidor Buchmann out that is very informative on this subject.

Motorola does not make there own batteries. I'm not sure who does but somebody like Multiplier, Alexander, JBRO, etc that makes their batteries. I believe the battery manufacturer is JBRo because Motorola buys the Telepower conditioner/analyzers and markets them with the Motorola name which is owned by JBRO so I assume that the Motorola batteries are made by JBRO.

The Motorola battery is no better than the JBRO or Multiplier batteries. This is based on personal/professional experience as a user and administrator with over 28 years as a Telecommunications Manager with a very large well known law enforcement agency.

I am an authorized Motorola Accessory & Parts Dealer and I sell the Motorola, JBRO, and Multiplier batteries for all make and model radios. I prefer the JBRO battery because of its longevity and optimum performance. JBRO has an 18 month warranty on their NiCad and a 12 month warranty on their NiMH batteries.

For an example, I sell the JBRI JB7144 1500 ma Ultra-High Capacity NiCad battery for the HT1000 MT2000 and MTS 2000 Motorola Jedi Series radios for $50.00 and the JB4013NIMH 2100 ma NiMH battery for $65.00. Your NTN7143 battery is a 1200 ma battery.

I also sell various audio accessories for all make and model radios such as speaker microphones, earpieces, earpieces with palm mics, and headsets, etc. and I accept credit cards. Since I made the time to write and respond to your posting I might as well put a plug in for me.

Let me know if I can help.

This battery conditioner has the ability to interchange the pockets/battery adapters for any make/model radio battery. You are not limited to just the radio/battery models listed below. I sell the battery adapters for either $24.00 or $34.00 ea and that depends on the model radio/battery. So if you have an HT1000/MT2000 Jedi radio, or P110/GP300 radio this unit is a good buy and I can provide you with the proper adapters for your particular radio(s). (No I do not know the seller)

Let me know if I can help.

From: Tom Seabury <tseabury@value.net>
Message-ID: <38B81EDB.2014A31D@value.net>
Source record: 84970

Does anybody know how to "ungroup" a memory location after its assigned to a memory group?
I've tried just about everything! Once a memory location is assigned to a memory group, I can also put the same memory location in another MG (this is good) but I haven't been able to delete a memory location from a MG once its been assigned. The manual dosen't mention this as well as lots of other goodies. Any help would be appreciated.
Thanks
de KO6RO

>See you at the museum.

Dan,
I learned code at 5WPM, I studdied for classes, I went to Ham Radio Outlet (to purchase several hundred dollars worth of radio equip.), I went to a club meeting, I talked on the air, I got out of the hobby!!!!!!!(Club meeting consisted of bickering BTW).

ARRL has an elitist attitude, Gordon West is an egotistical S.O.B., Ham Radio Outlet WAS full of rude personel (they burned down recentley.) and the traffic on the airwaves wasn't much better than I experienced on CB, I sold my equipment.

With a scanner, cell phone, computer and fax, I don't need anything Ham Radio has to offer. Nor do I think It is appealing as it once was to the youth of our nation.

I went to the Local Library Thursday night and right there in the foyer was a display of QSL cards, keys, photos and equipment from the glory days of the hobby. The Item that really caught my eye was a satin blue jacket with a large inscription on the back, "Buena Park Amature Radio Club", intrestingly, there was a letter placed right beside it that told of the club's history right up to 1999. It ended with a line that said "Club Disbanded."

Your precious air bands are being used less and less as the FCC and ARRL find it extremley difficult to come of age and appeal to the potential customer base of future radio owners.

Yes, I do belive that one day the bands will be sold to a private communications company if only for the FCC to get a quick cash infusion. The top dogs of that agency don't really care about Hams or Ham Radio, they only are concerned with their jobs.

The real guardians of the airwaves were the ARRL and the Hams themselves and as of late they both have proved beyond a doubt that neither of them is capable of keeping this hobby up to speed. The ARRL is a condescending dinasaur and the Hams themselves have been bickering amongst themselves for far too long.

Yeah, I'll see you in the museum sooner than later I think.

5493. Q: Drake TR7 / R7

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-26 00:00:00 UTC
From: Marco Eggert <m.eggert@arcormail.de>
Message-ID: <38B84189.C59E515@arcormail.de>
Source record: 84975

Hi!

I have some questions regading the Drake TR7 and R7, as I am very interested
in these radios. I have them at home now, as the current owner was so kindful to
bring them over to my place...so some testing can be done.

What should I look for before buying?
Are there any particular known problems?
Are there any serial numbers to aviod? TR7: 14xx, R7: 357 (!)
I get the impression that these are somewhat low serial numbers.

What is the difference between the TR7 and the TR7A ?

I did not talk with the owner about the price yet, he did not make an offer. I just
said I am interested...so there are some negotiations ahead of me...:-)

They come with the PS7 Powersupply, have AUX7 installed, NB7 is installed, FA7 Cooler, all filters, and the MS7 Speaker, no mike. There are some scatches but they are not that bad.

What do you think is a realistic price for the complete package?
What is a good price for only the TR7+PS7 without the R7?

Thanks for your help!

it does it all and at 50 watts. up down mic, quick release mobile mtg. bracket. Great shape, it mobile rig, it has never been pulled in and out of the car, avoiding all the scratching that goes with that. Super extended receive, off the wall offsets if you wish or just regular like everybody else. 220.00 Will consider trade for a shortwave receiver, very narrow vision when it comes to portable receivers, only very top of the lines will be considered.

Stats don't lie, however people use them in incorrect fashion to
prove their points. I seriously doubt there is a correlation between
knowing and using morse code makes you a law breaker. This asinine logic
is the same as when I hear someone say that because a few hunters are
disrespectful of other peoples property, all are that way. NOT!

Are you kidding me?

Another brillianst statement. No, the Congress makes the laws, the
FCC enforces them. The stats cited are based on FCC enforcement
action. Period.

Remove foot from mouth and learn to read.

However, if this is in fact nonsense, then so be it.

>FCC doesn't makes laws....so what you say is nonsense.

Conversely,

If the "no-code" Techs were the low-life CBers the "advanced" hams
claim them to be, wouldn't the stats be reversed, with the no-code
Techs being the Lion's share of violators?

Certainly there has been some wrong comments aimed at no-codes, some
may have been justified because of the "attitude" toward learning cw.
Its unfortunate that childish attitudes on both sides of this issue
result in more of the same, one side reacts by spewing more nonsense,
then the other counters with even more, a never ending cycle, but this
idea that stats prove anything is way off base.

To all who responded here, and directly by email.

Thank you very much. Your input has been invaluable.

I'm looking closer at the Icom 746 and 756 (used, not the pro). The
IC-706 series looked interesting, but I wanted something a little bigger
and with more features. I've received quite a few comments about the
FT-847 from people who own them, and they are all possitive (surprise :)
), so it's not out of the picture. For the folks that are saying it
isn't a good CW rig, feedback I've recieved contradicts that statement.
I may wait and try to hook up with someone who owns an FT-847 to see it
in action.

To those who asked why I didn't wait 'till April and get my General that
way; I set out to be a 13 WPM General when I started into the hobbie -
that was my goal. I passed the test today and upgraded. :)

73,

John - KB1ENS

5510. IC-706/CT-17 help needed

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-26 00:00:00 UTC
From: Dan <dan@truvalue.com>
Message-ID: <899oek$4dd$1@news.xmission.com>
Source record: 84992

Hi All,

I have an original Icom 706 and the CT-17 CI-V interface. The problem I
am having is that the radio won't respond to any commands. The computer is
receiving the commands from the radio ok. I have checked ALL of the CI-V
options in the Intial Set Menu and I am stumped!
This thing used to work fine, but now it just won't work. Is there a way to
RESET the radio to default values? Maybe the micro is lost in space? At
this point I'll try anything.

Any help is GREATLY appreciated!

73 Dan / N7SLC

Source record: 84993

Kenwood computer control software, Ham Windows. Extremely versatile. Original 100 page manual and disks, never even registered. You can "build" your own front panel and control what you want.

Manual specifically says for: TS-950S, TS-940S, TS-850S, TS-440S, TS-450S, TS-680S, TS-790A, TS-711A, TS-811A, TS-140S or R-5000. I used it on a TS-950SD. I suspect it can be used on newer equipment also.

The FCC makes policy BASED ON LAW. It does not make law.

>Remove foot from mouth and learn to read.

Go back to civics class.

>However, if this is in fact nonsense, then so be it.

>>FCC doesn't makes laws....so what you say is nonsense.

This whole thread is nonsense. Morse is dead. Get over it.

Ham radio is dying. Do something to save it, or get used to that, too.
All this whining and finger pointing does no good whatsoever.

Oh, and the lot of you....

Source record: 84746

Check out the TR-7's transmit power, especially on 20, 15, and 10 meters. Oftimes, the switching diodes would blow on these (they're pretty easy to replace) and you'd get very,very low power on the higher meter bands. A good TR-7 should put out at least 60 watts (measured on an outboard watt meter) on SSB voice peaks into a dummy load on 10 meters.

The TR-7's serial number indicates a pretty old one. In great condition (cosmetically as well as electrically), the TR-7 should bring about $400 if it lacks the noise blanker and only has the one default filter. Add $50 for the noise blanker, $25 for the FA-7 fan, and $50 for a full complement of filters. The TR-7A (serial numbers above 10000) had the noise blanker built in as well as more filters and the FA-7 fan.

The R-7 (not R-7A) brings about $450-$600 depending on condition and number of filters. The NB-7A noise blanker adds about $35 to the R7.

Ok while tresure hunting in the local junk store I came across this some
kind of Radio, C.B., Ham Radio, or some thing I dont know. It says
Hammerlund on it,
It has a off, rec, send, q mult-cw switch
Antenna adjustment dial
Main tuning dial
sensitivity dial
Main, Avc switch
Tuning Range Mcs switch, 20 bs, 10-30, 4-10, 1.6-4, .55-1.6,
Off, lim on swtch
Audio Gain dial
Band spread dial
selectivity dial
Freq. dial
Carrier level gauge
and it has two gauges that have all kind of numbers
ON THE BACK
3.2 ohms speaker hook up
Phones hook up
Meter zero adjustment knob

If any one can tell me about this or where I can find out about it, I
would be very thank full.

Mark

From: Gatorfan <Gatorfan@peoplepc.com>
Message-ID: <38b9eac0@flexnet239.uunt.net>
Source record: 84751

I just bought an ADI AT600HP 5W dual band HT radio and am having some trouble with the battery that came with it. It is 600mAh 12v NiCad. On arrival I charged the battery over night, 10 hrs. The charger that came with it is a 15v 100ma.

The battery discharged after 30 mins on recieve only. The reciever draws about 85ma on recieve. I am assuming that is this NOT correct behavior for a new battery or this radio.

My question is: have I made a big mistake in buying this radio? It is under warranty. Would I be better off to return this one purchase another brand? I like the size and features, the others are too small for my hands.

reply to:
Gatorfan@peoplepc.com
--
When trouble arises and things look bad, there is always one individual who perceives a solution and is willing to take command. Very often, that individual is crazy.

>All because we just can't let go of that damn code....

You Should Look at Irish (EI) Licensing if you want to see stone age.

We don't have Amateur Radio Licenses we have Radio experimenters licenses, I have to apply individually for each mode and band I wish to use detailing my equipment and my intended experiments!!

For HF Privileges I have to pass a 12 WPM CW test (which I am studying for now), I am then restricted to 7 & 14 Mhz Only (@25W or less) for the first year (or first 250 Contacts with QSL cards to prove) I then have to apply in Writing to the ODTR to use all the other bands and modes.
Ireland has been a member of CEPT for years but the Irish Radio Transmitters society has made no representations to the ODTR (Irish Equivalent of the FCC) to have Irish Licensing brought in line with the rest of the CEPT Countries

BTW the Office of the Director of Telecommunications Regulation (www.odtr.ie) is bang up to date it's just that they leave it up to the IRTS (Irish radio transmitters Society) to propose any changes to Experimenters license conditions. The IRTS has no interest in modernizing Licensing and have not asked the members (Of which I am one) our views. The irts takes the view that reducing the cw requirement or indeed any changes to the Licensing system would lower standards and be unfair to those that have done it the hard way.

I am going to Sit (And hopefully Pass!) my CW test in the next few weeks , I will not feel hard done by if this requirement was reduced or scrapped in the future.
I have held a Class B license (50 MHz and above) for 10 years, I have built much of my own equipment
2M Linear Amp and Pre amp
50 Mhz Transverter and 50 Mhz power amp
10 Ghz WBFM setup
I can think of may radio related projects that I could be doing with the 40 or so hours it is going to take me to get my CW speed up to 12WPM

>See you at the museum.

I guess I won't be working you in CW during my first year then (Whilst of course I am conducting legitimate Experiments into the nature of HF

propagation of course.)

Who cares! They were supposed to bring competition to the market place, but all we have is a tube market where prices are fixed with no true competition. They have set there prices almost identical to eimac. Considering what these tubes are made for in the USSR we should get a better deal. If you a tube user you caught between the Chinese Crap and Eimac. The only people i see that would suffer if Svetlana went out of business are those using dedicated 4cx1600b amps, as the closest tube to that would be the 4cx1500b, or 4cx1000. You would need several mods to accomodate these tubes. All i can say about Eimac is their excellent service and warranty support, its a pity they have stitched the market with Richardson. Maybe Svetlana should learn from this and free up their marketing practices and start a price war, some seem to forget that you only succeed if your have a major percentage of the market. But who really knows?

Follow-ups set to just r.r.a.misc:

In rec.radio.scanner Daniel M. Conti wrote:
>Of all the license suspensions, revocations or reviews by the FCC in
>past six months for RULES violations, 85% had passed their MORSE CODE
>test!

This is easy to explain: On HF, if you so much as sneeze, half the world could possibly hear you; HF violators stand out and need to be nailed (NAL'd) to save face internationally. OTOH, on V/UHF, due to it's limited range, the FCC would need to have a monitoring station in each and every community to catch all the violators.

I suspect that there are many, many more violations committed on V/UHF than on HF, but they go unheard by the FCC.

That the HF riff-raff are coded just shows that *anyone* can learn the code -- even scum-bags. But if you tune down to the low end of each band where code is being used, you won't hear any of the non-sense which occurs on SSB.

Internet's fine if you don't mind being leashed. You're helplessly dependent upon untold billions of dollars of computer equipment belonging to thousands of corporation, interconnected by millions of miles of cable, staffed by thousands of workers putting in tens of thousands of man-hours per day to keep that incredibly complex system running.

Hams, on the other hand, have no such dependence. It's the *only* communications medium in which any two operators anywhere in the world can communicate directly without using government or commercial communication services. Those same two operators don't even need to purchase commercially-built radios -- they can build them themselves.

Yes, you can power this radio with NiCd batteries in the AA holder. But it would be a better idea to use NiMH batteries, as they have a greater capacity and last longer. Do remember that new NiMHbatteries usually have to be conditioned before they will deliver on this longer life.

That's the wrong mod for the FT-90R. I found a mod AND tried and test it on my own FT-90R and I love it. The rig works just as well as ever and now has extended tx. 130-18- and 410-480. All it involves is snipping one lead into the cpu. Here is the article I found it in.

Subject: FT-90 Mod HERE!!!
Date: Mon, 7 Jun 1999 21:10:24 -0400
From: "KA8ZGP" <jim@futurevision.net>
Organization: Posted via RemarQ Communities, Inc.
Newsgroups: rec.radio.amateur.equipment

I just figured out the mod for the Yaesu FT-90. It will give you TX 130-180 MHz / 410-480 MHz.

1. Remove 4 screws from bottom of radio.
2. Remove R2156 (connected to pin# 21 on Q2021, the CPU HD6473337YTF16)
3. Replace cover and screws.
4. Perform a Master Reset (hold down DISP/SS, <| |>) and turn on power.

That's it!

Perform this Mod at your own risk.

Now you Old Bitching Hams do you think we should eliminate code
or maybe just maybe we should make the test harder. Maybe just maybe
give a test without the answers available.
This has got to be the dumbest question I have seen to date.
I see it has a 5 call maybe the good ole boys down south found another CB'er
to payem a few bucks for a ticket.
Seems this poor sap needs to power up his foot warmer and needs a
big ps. Will the ignorance ever end. Hey how about we pull out the study
manual and look it up. Oh yeah for $50 he doesn't get the manual.
ASSHOLE ASSHOLE.

I'm switching my system from Win98 to Win2k. I have computer controlled receiver IC-PCR100. I just checked Icom web site and apparently the software is good only for Win3.1 and Win95/98. Is there another software I could use for Windows2000??? (Or will I have to sell the RX?)

Hi All,
I recently purchased a Kenwood TR-8400 UHF rig and I would realy like to use it as a 9600 baud packet rig. Does anyone know if or where if this rig can be modified for 9600bd and where I might be able to locate them.

Thanks in advance es 73,

Mark NL7IY@amsat.org

One of our club members, a lifelong Ford truck owner, has every one of his new Fords oufitted with some kind of ignition mod to eliminate noise. He says it's some kind of dealer-installed thing which they also perform on law enforcement vehicles. Hopefully your Ford dealer will know about it. Good luck.

Anyone have any experiance with this unit? Good, bad or indefferent? I'm considering buying one and would just like to hear from those who currently own one to hear how they like it. Since I will never buy another Kenwood anything, my choices are currently limited to ADI, Ten Tec, or a converted high band GE Mastr II. Time constraints being what they are, the quick and easy way out is to buy rather than modify.

Thanks.

P.T.

5558. Yaesu FT990 Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-27 00:00:00 UTC
From: Lou Wilson <mboro@infomagic.com>
Message-ID: <sbje178djp176@corp.supernews.com>
Source record: 84893

Hello

I have a Yaesu FT-990 and an ICOM 735 with an MFJ 989 tuner into an R7000 Vertical.

If I have the tuner set to coax direct, both work flawlessly. If I set the tuner in the tune position and make the necessary adjustments (lowest SWR), the ICOM 735 works perfectly. If I switch to the FT-990 and make sure the settings are correct and then key, it will key perfectly for about 10 dashes and then the HI SWR lite comes on and I notice on the meter that after the last dash, the power out needle is up and the SWR needle shoots way up. Stopping and starting again, causes the same thing to happen. This also occurs in the dummy load (tune) position. If it goes straight to the antenna, it works perfectly.

Also noticed that the automatic tuner in the FT-990 is happy on 10 meters but on the other bands, it tunes and then the hi swr light comes on. But, in the above tests, the automatic tuner is OFF completely and isnt in the line.

Any ideas where to start? What could be causing this? I have three tuners that I tried and all of them react the same way. The Yaesu doesn't want to be tuned.

Thanks

73 Lou K7MQ

I have an Radio Shack HTX-100 with an out-of-warrantee factory repair. It had been subjected to an overvoltage (unregulated supply). After being repaired by RS, I tested the RX and boxed it up. Yesterday I hooked it up to a 12v RV battery, and an antenna with a 1 to 1 SWR ratio. All I did was key the mike, and poof. The unit shows full digital/lcd functionality, but no xmit and just weak background noise on RX. I do not have a schematic, but would probably be able to replace suspect components if someone would be kind enough to help. My newsserver misses a lot of posts, so if possible, please reply to joemartorelli@msn.com. Thanks!!! Joe WA2TCE.

Marco,

Check the digital display on all of the bands. Run thru all the digits and
make sure all the digital segments light up.

Hook up a good wattmeter into a dummy load and measure output on all bands.

Cross-posted to: rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.swap,alt.music-lover.audiophile.hardware

Hi, I'm looking for old synths (Moog, ARP, Sequential. Oberheim, Roland, Korg, etc), effects, drum machines, vocoders, tape echos, sequencers and other electronic musical instruments or accessories, in any shape, BROKEN OK.

The older or more unique, the better.

Please email me privately if you have something I might be into or know someone who might. Be sure to include price and condition.

A short list of examples:
Graphic Equalizer GE-810 and GE-820
Stereo Phaser PH-830
Voyetra Eight polyphonic synthesizer module
Integrated Kyboard Wavemaker 4 or 6
Oscar with or without MIDI
PPG Wave 2.3
Studio Electronix P-Five Pro-5 analog rack module
Morenz-Perkes 1200
PMS Syntar
etc!!

Thanks for your time!

I presume it claims that it is only good for those because 2000 wasn't around when they wrote it. I believe that anything that runs on 95/98 will also run on 2000 otherwise nobody will ever switch over.

>The battery discharged after 30 mins on recieve only. The reciever
>draws about 85ma on recieve. I am assuming that is this NOT correct
>behavior for a new battery or this radio.
>

In a review of the AT-600 Gordon West mentioned:

------ Clipped from review --------
I plugged in the charger, rotated a little rubber boot that protects
the "DC IN" receptacle, and put the unit on charge overnight. Next
morning, I checked how warm the little wall charger got, and it
was stone cold. Something wrong here.

After close examination, I discovered that ADI used the same style
jack for both "DC IN" (looking for a regulated l2-volt connection) and,
way down at the bottom of the battery pack, "Charger IN." Cockpit
error at my end--I had accidentally plugged the little "wall wart"
charger into what should have been 12 volts DC instead of the direct
connection to the battery with 9 volts DC at 100 miiliamps. Luckily,
no harm was done, but it took me the better part of the morning to get
enough charge on the battery to continue my test.
----- End of Clip -------------

I guess if Gordon West could make that mistake, most anybody could?

5582. EV 676 Specs

Newsgroup: rec.radio.amateur.equipment

Not really - Microsoft has made it very clear that W2000 is NOT the
replacement for W96/98. Rather it replaces Windows NT. As such, W2000
does NOT support many non-business devices such as the PCR-1000. Device
drivers are the issue and missing element.

Brown Bros. (Machine Co.) BLT-A Key Parts needed.

I am trying to repair a Brown Bros. BTL-A Iambic key.
The part I require is the Spring-steel leaf spring which
fastens the paddle arm to the fulcrum. This is a small
piece of spring steel or stainless shim-stock approx .005" thick.

Does anyone have a parts unit or parts thereof, who can help me out?

**** IMPORTANT NOTICE: This software will be updated to reflect the
**** changes in FCC licencing structure (the five exams down to three)
**** by March 15th, 2000 (and possibly sooner). If you register the
**** software now (or at any time), you are welcome to free unlimited
**** lifetime upgrades, so you certainly will be able to upgrade when
**** the new version becomes available.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your
mates!) The program will drill you for the following elements:

ELEMENT
2 Novice
3A Technician
3B General
4A Advanced
4B Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

No problem with that Radio at all. The features it has are great for
the price. Had one for a year now and use it daily.
You may have gotten a bad battery.
One thing I noticed though. The charger itself had a bug.
It went oops only after 2 uses. Found that the primary winding on the
transformer came loose.
Was a pain in the kaboose to redo that one. but it is working now.

Bill,

I have been using a TS-120S since about 1980. I bought it new and it has been my only HF rig since. A bit bulky for mobile use, but it does work. I've run mine mobile many times. I'd plan on cleaning the bandswitch contacts. I've had to clean mine. If it has seen any mobile use at all, plan on tightening the PC board mounting screws inside. These can work loose and give you problems with oscillations. Overall it's been a very reliable radio.

You are ABSOLUTELY RIGHT, it is worse than I thought - 2m IS a
WASTELAND. I am a 12 year TechPlus, and I dropped out 4-5 years ago.
Just dusted off my equipment, and started monitoring 2m - about the ONLY
thing I hear is packet activity!

The code wasn't the problem - it was the ignorant, elitist, selfish
attitude the old farts had.

I currently own the ADI 147+ and an ADI 447 (sorry no 247) but they are generally the same radio. Both are being used in a base station setting. Overall I am pleased with their performance and simplicity. The DCS feature is a nice bonus to the package. A one wire snip mod is all thats needed for expanded rx and tx. Two complaints that I do have with the rigs are : 1. S-meter almost always shows full scale readings for anything with a strong signal (both rigs suffer from this) and 2. Out of band rx on the 447 (462 mhz range) very weak signal strength. Hope this has helped.

My name is Kresimir Jurak and I'm a president of students union at
Philosophycal faculty Zagreb, Croatia.

We are considering of starting students radio, and we need help.
What kind of equipment do we need, how much does it cost and where to
buy it.
All help is needed.

Please send me your comments on this news group or on my email:
thorin@mailcity.com

Thank you in advance.

Dan
your manual should have the info on how to reset your radio. usually
involves holding down 1 or more keys while turning on power.

Given care has to be taken when charging NiMH batteries to assure the
temperature doesn't rise too high.. or that you don't charge them too quickly,
I should say, I wouldn't risk charging them in the radio. That's my opinion.

Sorry to burst your bubble but your last statement is totally incorrect. Why would we loose the 6, 2 and 440 bands because of the code? These bands are for the no-code and when a person does pass the code test they move away from the 6, 2 and 440 bands for HF. No matter what you do, eliminate the code or pass the code test, you will not stay on 6, 2 and 440 but will go directly to HF.

Also you answered you question about the enforcement. The no-code techs do not get on the radio as much as coded amateurs. They also do not get on frequencies that can be heard all over the world. If they fail to ID properly or allow their wife to talk on the radio to them even though the wife does not have a license they never get caught because they are on frequencies that travel a vary short distance.

Doing away with the code will only bring the end to the VHF/UHF/SHF bands as all new operators will go directly to HF.....

Local clubs here treat everyone the same. Its what you put into the
club that what's count. If you go in with a chip on your shoulder
then sure there will be problems with the other hams.

PS> Is the a California thing?

5620. New Kenwood Base HF Tranceiver??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-28 00:00:00 UTC
From: va3bsf@rac.ca
Message-ID: <89eobtgfk1@nnrp1.deja.com>
Source record: 84808

I was talking to another amateur this weekend. He mentioned that he had heard that Kenwood was preparing to launch its new top-of-the-line HF tranceiver at Dayton this year. Rumour was thats it's a 200W unit.

Has anyone else heard this? Or is this just more of the same old same old about Kenwood?

Cheers,

VA3BSF

I have a Yaesu FT-2200 two meter transceiver in beautifull shape bought it in 1998 from Jun's and it is loaded with bells and whistles like extra extended receive/transmit, all manner of offsets, 50 watts, quick release mobile mounting bracket, up/down mic, etc. I want 200.00 or will trade for a DX-398 or DX-392. My reason for sell or trade is I have an abundance of vhf, hf rigs but I do not have a portable SW rig to listen to outside of my shack.

Hi; According to the manual, the TH-28 will put out its maximum of about 5 watts with 12.6 V input. The manual is decidedly unclear about just exactly how to get the required juice into the innards. Must this be done through the internal battery connections via a 12 battery pack/adapter or through the charge jack next to the antenna connector? Is that skinny li'l cord supposed to deliver all them electrons while acting as a low impedance link to the outside world? TIA, bye, sid

Pat I have a Ford Windstar and have noise problems to. Haven't been able to get rid of it completely. Don't think you can unless you want to start major electrical modifications. That's the story I've been given by several people. I found that placing the antennas at the back of the vehicle helped some. Also wiring the radio directly to the battery also helped some. Tried caps on the heater fan which was one of the noise probs and it also helped a little but still not completely. If you want a good laugh call the dealer and ask how to fix the problems. The send you to radio shack for a filter that does zip!

I will just put up with it and will choose my next vehicle more carefully. Probably will not be a Ford.

Hi Gary,

I agree with you that this discussion has reached a very childish and ridiculous point and I appologize for contributing to this (although others contributed as well).

I agree with you that posting in english clearly increases the chances to get an answer to a posting (I never disagreed -- see my former posting

In my opinon there is some disagreement on the basic character of a newsgroup in general. I conclude from your former postings that you understand a newsgroup as something similar to a roundtable on the band. If you understand it like this, than you are right if you consider a foreign language posting as unpolite.

I understand the newsgroup as something similar to a whole ham band, this should mean I can move around in the group/on the band, see the titles/listen for the callsigns and DECIDE if I want to answer or not. Here in europe you hear russian, italian, spanish, french and lot of other languages everyday (apart from english) on the higher bands. Although english is clearly the dominating language, I never heard someone replying to a (for example french) CQ with the words "speak english if you want to talk to us". If you understand a newsgroup in the sense I just described, I think you will accept german language postings to the same amount as you accept german speaking stations on the band (I hope you do).

These days, there is largest computer fair in the world taking place in my home town, with more then a hundred different countries. Almost 200 different countries and organizations signed for the EXPO 2000 world exhibition in summer this year. I never observed a reaction similar to what I observed in this newsgroup when somebody is asking which train to take etc. in english (no, I'm not in the tourist office and don't earn any money due to the expo). I guarantee that YOU, if you plan to come to the expo, will not be treated in a manner similar to the behaviour of some of the repliers to the initial posting. I guarantee that anyone here in HANNOVER will try to help where he/she can and will not insult anyone for not speaking german.

I appologize for choosing an unpolite way to make clear that the statement about the gun owners is not my opinion, but on my screen it was not clear, if this is my statement or yours. I concluded from this that there might be other people reading this newsgroup who might get the impression that this is my opinion what is certainly not true. It is up to people of the US to decide how they define "freedom" but I have the impression that there a lot of people in the US sharing my opinion. I don't know if more

laws will help or not. Just from simple statistical arguments it should be obvious that increasing the number of guns in a given area will increase the number of people killed by guns. This does not mean that every gun owner is planning to kill people. I don't think that gun owners are criminals. I just say that if I were a criminal, got into your house, found a gun there, my chances kill people are much higher than they would be if I didn't find a gun in your house.
By the way, it is YOUR country, it is YOUR government and is YOUR own risk. If you don't like your politicians, why don't you become politician and change the things you don't like.

Since this newsgroup is on antennas, not on policy, guns or how to treat foreign language posting, I will stop discussing these things right here, although I would like to know how you understand the decision of a jury in NYC, that these policemen were unguilty after they killed an unarmed man (hope this word exists) with (was it this number) 41 shots.

To the other readers of my last posting I promise not use this newsgroup as a forum for "non-antenna" topics anymore. I'm open to discussion, but let's find another newsgroup or use e-mail. In this sense I hope that you can sign this "gentleman agreement" and don't attack me here but use my e-mail adress.

The show is over

Vy 73, see you on the band

Ralf

Message-ID: <38bab795$0$1373@news.voyager.net>
Source record: 84814

Yaesu sells a filtered DC power cable (EDC-5B) for the FT-10 HTs. I assume that this cable has a cigar lighter adapter and fuse. I want to build a DC power supply for using my FT-10 on my motorcycle. I don't need the cigar lighter adapter as I will wire directly to the battery. Is the filtering in the Yaesu cable anything special. Will a standard Radio Shack 10amp 12v filter be adequate? Any other suggestions on hooking up power?

Mark

5627. Re: Engine Noise 2000 Ford Expedition

I have an Explorer with the same problem... lots of fuel pump noise and some underlying ignition noise.

Ford has installed two different filters for me inside the fuel tank. That plus a couple of other mods did a lot for the problem but didn't cure it. The other mods were breaking the fuel pump ground line as close to where it enters the tank as possible and grounding it there. (Originally it ran all the way back to the battery.) I also installed a heavy coaxial capacitor in the B+ line, as close as possible to the tank entry point.

At that point, 40 meters was the worst. 75 was almost clean as were the higher bands. I've also tried two different kinds of DSPs without much luck.

A few weeks ago, I ordered a ClearSpeech Speaker (www.amateurcommunications.com). It's a $129.95 item and basically another DSP. I debated for several months because it's a lot of money for something ELSE that doesn't work. Amazingly, IT WORKS!! I've never seen a dsp that will actually let me hear signals I can't hear without it. Most of them make copy a heck of a lot more pleasant, but they can't dig out signals that are masked by noise. This one does! A friend of mine with an Explorer tried one, too, and his reaction was the same as mine. I am now able to run 40M mobile again.

I'm sure there are still weaker I could hear with the motor off, but this gadget lets me hear more than enough for good QSO's. I'm really happy with it. And no, I have no connection with the company or any of their dealers.

5631. SMA antenna connections: Yaesu FT10 vs FT50 Antenna connectors

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-28 00:00:00 UTC
From: Mark Erbaugh <mark@nospam.microenh.com>
Message-ID: <38babac4$0$1373@news.voyager.net>
Source record: 84819

Will someone explain why the SMA style antenna connectors on the Yaesu FT-10 (2m) HT and the FT-50 (2m/440) HT are different? There is even an addendum in the box that says that some connectors that look like they might fit won't and that the wrong one can actually damage the radio.

In the old (BNC) days, BNC was BNC and you only had to worry about the frequency of the antenna. Is there a 'standard' SMA?

Is there a source of SMA plugs that is compatible with the FT10 / FT50? I want to wire up an external antenna for my motorcycle?

VERY well put - and accepted Ralf!

In fact the ONLY statement I *will* contest, is the one relative to guns and statistics. Those statistics in places like:

New York - LOTS of gun laws/restrictions - ALSO lots of gun related crime!
Switzerland - guns in nearly every home - LOW gun related crime!

Similar statistics showing the SAME results can be produced for MANY other areas - the basic key being that the MORALS of a society determine the "threats" created by items like clubs, knives and chainsaws, NOT those items by themselves. THUS, it should ALSO be clear that demonizing the ITEM, and not the underlying causes is FUTILE!

Outlaw guns, and violent people merely turn to some other available "weapon" - you can't POSSIBLY ban them ALL!

As a teenager living in rural America, various firearms were common in homes and pickup trucks - we saw EXTREMELY FEW gun related violent crimes. So what has changed in recent years? Have *guns* themselves become more violent? Similarly, "road-rage", or violence on roadways has increased many-fold - have our CARS or ROADS themselves become more "violent"? Of course not - it is the morality of our SOCIETY that has changed - and disarmament, or banning of guns OR cars will NOT correct our basic problem!

CORRECT our morality problem, and the WEAPON issue will disappear as it was in past years - but of course, far too many here and abroad prefer to use the force of legislation and "quick-fix" laws rather than the more likely long term fix of returning our social morality and family values to those of yesteryear...

I offer no apology for expressing these views in these groups - the basic principles involved span FAR beyond those relatively trivial issues or subjects usually found here - and should be expressed and demonstrated far more often by those with strong feelings on this subject! *I* am an American first and foremost - I am PROUD of the basic issues and principles our nation was founded upon - and make NO apology for my efforts to re-establish and underscore those basic principles! Ham radio is great - but it doesn't begin to compare in importance!

Regards...

Gary - KJ6Q

Rather than addressing the morality problems, police states have
historically simply disarmed their citizens and tried to monitor
their every action. It has been so for thousands of years and it
is still so. Technology has recently made it easier for governments
to disarm and monitor their citizens every action.

How are they different? I was under the impression that one of the
single-band radios (either FT-10 or FT-40, I don't know which) used a
male SMA, while the other one plus the FT-50 use a female SMA. This
was to encourage you to use the correct single-band antenna for the
radio. Is the difference more than male/female?

>In the old (BNC) days, BNC was BNC and you only had to worry about the
>frequency of the antenna. Is there a 'standard' SMA?

>Is there a source of SMA plugs that is compatible with the FT10 /
FT50? I >want to wire up an external antenna for my motorcycle?

There is a standard for SMA connectors, and the FT-50 *is* compatible
with it. I've built several cables with standard SMA plugs on them.
The Icom R2 also uses an SMA connector, and standard SMA plugs also
mate with it correctly.

This doesn't say that *antennas* are all interchangeable. Usually OEM
antennas are designed so that the antenna base mates with the radio
case in some well-defined way, and some other antenna probably will not
electrically mate with the SMA connector and also fit the radio body
exactly at the same time. Sometimes it still works, but the connection
is left exposed to dirt rather than being protected, or a water seal
that's present with the OEM antenna is lost with another antenna,
or the antenna body contacts the radio body and *prevents* a proper
electrical connection. This was less a problem with BNC antennas
since they usually didn't touch the radio body, just the BNC connector.

Dave

5637. Re: Changing Battery - Kenwood TM-231A

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-28 00:00:00 UTC
From: Bubba <bubbajoe@mail.usa.com>
Message-ID: <FzBu4.4312$kO5.17840@typhoon.tampabay.rr.com>
Source record: 84825

How similar is the 231 to the 221? I think they are pretty much the same. I have considerable experience with changing out the battery on the 221. It is mounted on back side of the front panel display (on the 221) and you have to pull the front off the rig to get to it. I had to replace it 2 times on my wife's radio. on the second time I soldered two wires to the front panel and put a battery into the main compartment so if I have to go in again it will be easy and I won't have to pull out the display unit again. The second reason is that the oversized quarter sized cell is difficult to solder into place cause you need the solder tabs welded to the battery.

So having said all that -- I think the best thing to do is get in there, cut out the old battery, solder a pair of wires and run them back to any place you can stuff a small battery.

cheers

5640. STANDARD 568A HT--For Sale

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-28 00:00:00 UTC
From: John Thurston <n0meq@mitec.net>
Message-ID: <38baedee_5@goliath.newsfeeds.com>
Source record: 84828

I have a Standard 568A Tri-Bander HT for sale. This will tx and rx on the 23cm, 70cm and 2mtr bands. It is in very good condition. I had it for approx 3 years.

I am also including 2-12 volt batteries one of which is a Standard battery and of course the 7.2 battery that came with it. The two 12 volt batteries are 2 years old and the 7.2 volt battery is 3 years old. Also, with the package deal is a Standard CSA-181 rapid charger that is 3 years old.

To Re-cap:

Standard 568A Tri-Bander HT
1- 7.2 volt battery
2- 12 volt batteries
1- CSA 181 Standard Rapid Charger
wrist strap, wall charger and manuals included along with original boxes.

$400.00

Will accept USPS money order

5641. Icom IC-735 IF filter problem

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-28 00:00:00 UTC
From: g0hdb@amdavies.demon.co.uk
Message-ID: <20000228.2225.366snz@amdavies.demon.co.uk>
Source record: 84829
Cross-posted to: uk.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.misc,aus.radio.amateur.misc

Over the weekend I detected a possible problem with my Icom IC-735 HF rig. I noticed while receiving with the rig set to the 'CW' mode that when I switched from the narrow (500Hz) IF filter to the standard 2.4kHz 'wide' filter, which is also used when receiving SSB, the received signal level seemed to fall by about 20dB. I recall that I used to perceive that the signal level was slightly lower when going through the narrow filter, not vice versa as it is now. When receiving in SSB mode the signal level seemed to be the same as in the CW wide mode, ie. about 20dB down on that when in CW narrow mode. The SSB and narrow CW filters are both centered on about 9MHz.

It seems to me that something in the signal path through the standard 2.4kHz filter isn't working as it should. The filter switching is done using diodes; apart from those and a few terminating R's and C's there's no difference (AFAICT) between the wide and narrow signal paths.

On the very few occasions I've transmitted on SSB recently I've had to set the mic gain to a very high level to get full RF output - again this would appear to indicate excess loss somewhere in the signal path. I believe the transmitter chain uses the 2.4kHz filter to remove the unwanted sideband, so a problem with the filter itself, its terminating components or the associated diode switching would explain both the transmit and receive symptoms.

Has anyone else ever experienced a problem like that described above, on either an Icom or any other make of rig?

I remember reading in this newsgroup a long time ago (probably >1 year)
that some after-market SMA antennas (i.e., non-Yaesu) had either a
longer or shorter center conductor and could either damage the female
connector on the HT or not make proper contact. Sorry, wish I could
remember more details.

Regards, Randy, N1ZUO.

That little skinny cord can handle 1.5 amps which is all the radio draws
at 5 watts..

That fits the description of the problem in the manual addendum. I hope
Yaesu didn't do this to discourage the use of 3rd party antennas.

Dave,

Have you looked at the Yaesu FT10? Jun's is closing them out for $130 or
$140 (if you want the DVR model). I like the fact that they are rugged and
water resistant.

Bill,

Have you checked the Kenwood website? They have a lot of owner's manuals in Adobe Acrobat format available for download. I don't think they have the service manuals, though. If they don't have the 8400 manual, you might send them an email. I was looking for a manual for an OLD PC1 (not PC1a) phone patch, and they scanned it in and emailed me the file.

73,

==========
The band plans for Region 1, Region 2, and Region 3 are different -- see
URL:
http://www.arrl.org/field/regulations/io/faq.html#freq

Also if you look at the band plan for the USA, we can operate phone from
7.150 to 7.300 depending on license class.
See URL:
http://www.arrl.org/field/regulations/allocate.html#40

Many other countries are permitted and do operate phone well below the USA
band plan. For example -- the UK:
IARU Region 1 bandplan UK Usage
7.000 - 7.035 CW only Primary
7.035 - 7.045 Digimodes Primary
Phone may be used above 7.040
7.045 - 7.100 Phone and CW Primary
See URL:

ICOM IC-R2

NEW IN THE BOX

Ultra Compact size: 2.3 (W), 3.4 (H), 1.1 (D), 6 oz. (about 1/2 the
size of most other
handheld receivers)
-Wide-band performance: 500 KHz - 1.3 GHz Continuous !

This is the Canadian version so there are no blocks !

-AM/FM/WFM
-Large front panel controls for easy operation (like quickly
switching bands)
-Surprisingly loud and crisp audio from a unit this size
-100 mA audio output
-Large 36mm (diagonally measured) speaker
-Triple conversion superheterodyne
-Large, backlit LCD display
-Timer included
-Battery charge indicator
-Easy to see, wide viewing angle
-400 memory channels
-8 banks of 50 channels
-EEPROM to protect against memory loss
-Memory info includes tuning step and other settings
-Tone search (CTCSS search)
-Tone squelch (CTCSS decode), auto set with manual set override
-Pocket beep
-Built-in attenuator
-Wide selection of tuning steps
-Includes 2 AA size Ni-Cd batteries and charger, or use AA size
alkaline batteries -- your
choice
-Noise blanker
-Priority watch
-Lock setting
-Sleep timer
-Auto power off with selectable times
-Earphone jack
-SMA antenna
-Weather resistant construction
-PC programmable:
-Clone from PC to IC-R2, or IC-R2 to IC-R2
-Use available 3rd party FCC Master File licensee database software

and your PC to quickly
customize your IC-R2 to scan only the active channels you
want--anywhere in the country!

> I agree that morse code is obsolete -

It's too bad you began with a false premise! Some poll says that code is the second-most used mode on the HF ham bands, but if you tune across the bands, at times you'll hear more transmissions in Morse than on phone (SSB). That certainly doesn't fit the definition of "obsolete."

I have the ar-247, and I love it. I thinks it's the best 220 radio for the money that your going to get. The audio is a little hot on the mic, also a little tinny. The radio works great though. It does squeal a little when I transmit on hi power on the 706, but other than that it's good.

> Mark, N8ME

Well, in the "old" days, BNC's weren't necessarily BNC's. There were
(and are still) 50 ohm BNC's and 75 ohm BNC's. Plugging a 75 male into
a 50 female wrecked the 50 female since the pin diameter of the 75 male
was larger than a 50 ohm. This is, of course, ignoring other variations
such as reverse polarity BNC's and twinax BNC's

With SMA's, I'm only aware of 2 standard types of 3.5mm connectors, SMA
and APC 3.5. The only difference between these is the dielectric, SMA
is Teflon, and APC 3.5 is air. APC's are good to higher frequencies than
SMA's. There's also a 2.9mm, which according to my Pasternack catalog
will mate mechanically & electrically to 3.5's & SMA's. Then, there are
reverse polarity versions of these too...

So, in answer to your question of a "standard" SMA, yes, as well as a
few other connectors which are compatible with it. Frequency ranges are
different, but not a factor with these radios (these connectors are
good to 26.5 or so GHz).

Sorry I can't help with Yeasu's specific differences in their connector,
hopefully it's not a "special" connector that's just SMA-like.

Greetings ....

A friend, Walt N4GL and I went to a Hamfest last Sunday
and he bought a RTTY Terninal Unit which seems to work,
but no manual.

Walt needs any information, or perhaps an Instruction Manual
for the following:

Dovetron "Tempest" RTTY Terminal Unit
Model MPC-1000T II.

Should anyone be willing to swap/sell an IM on this unit before
Walt blows the thing up, please reply to:

Walt Treftz N4GL at: http://boomer1@hitter.net

or via this newsgroup, or direct to me at:

Jim Smith W4ONO http://w4ono@citrus.infi.net

Thank you,

The W32A seems to have all kinds of undocumented features. I just bought one and had to post a query on how to make it a cross band repeater. I got this info from a guy that sent me a copy of an operating guide that they no longer ship with the unit, and now this. If you get the answer please share it with me. If you need to find out how to crossband I will be glad to share that with you.

Your best bet would be to subscribe to QST magazine. As a subscriber, they allow you to access their product reviews going back a good 10 or 15 years, which are all located at the ARRL web site. QST always talks about how well a rig works on CW, and shows ossiloscope(sp?) screens of the keying characteristics of each rig. Some do a lot better than others. Price of a rig doesn't seem to be much of a determination.

For break-in operation, Ten-Tec seems to be the best of the crop for now. You might try their web site, and look at the Scout, Pegasus and Omni IV, to cover a fairly wide price range.

Source record: 84671

Well, I wish I had gud news to report, but I do not. (sigh)
Let me share with you my frustrations tonite. I can't transmit!!

System:
Drake TX4
Drake R4A
AC-3 power supply
First I adjusted the power supply bias. Essentially that means adjusting a pot on the power supply so that the plate amps meter reads .07 amps, at "tune". Done, no probs.
Then, to tune up, you put the rig in "tune" mode, advance "gain" knob to 1 division, and adjust the "RF tune" control until plate current is about .15 amps on the meter, then quickly tune the "plate" control for a peak current dip.. PROBLEM!!!! The meter doesn't move at all when I go to increase the power to .15 amps as specified, no matter how I turn the RF tune control. If I move the "plate" control, nothing happens.....Hmmmm?
Then, you are instructed to alternately adjust the "load" and "plate" controls for maximum output. I'm still stuck at step two!!! Argh!
Is my power supply cooked?
Problem two:
when I try to adjust for CW, keying the transmitter gives a "click" (like a "dit") then it goes off. I try to adjust the "vox gain", but that doesn't help.I have it practically all the way on! (fully clockwise) If I really crank the "Gain" up,(like 3/4's of the way) it will stay on for about 1 second, then it goes off, then I can hear almost like an "echo" occur, like it goes on again and I don't even press the key. I notice if I mess with "vox delay", that affects the on-off, but still, it doesn't seem to stay on appropriately, or shut off appropriately. If I key quick like I'm doing "dits", I hear the echo again. I'm quite sure that this problem is directly related to the power output thing described above.
Yes, I have read instructions. I could fax/e-mail them to ya if you think that would help. Right now, I'm snatching at anything. Receiver works fine. I can control VFO from receiver or transmitter.
I noticed NO OUTPUT thru MFJ tuner. I put on my RS SWR meter. Needle barely budged!!!!!
When I go to "spot" to compare transmit/receive, like zero beating, I can barely hear the beat note, again, unless I crank the "gain" way up.
Pse respond here or direct

Hi all, IC 32A
You can exit crossband repeat by pushing the lock button until the lock
icon stops flashing. It doesn't say that in the manual.
Also,you can get cellular calls in the 600 -625 mhz band.

Just passed my No-Code Tech test last week and am waiting for the FCC to approve my license, but in the meantime, I picked up the ICOM-T22A and it is a great radio. So far, I have only been listening to the local repeaters, but the controls are well laid out. The only thing was that it has so many advanced functions that the first couple of days I had to have the manual handy.

I picked it over the T2H because the T2H seems so bulky and not as feature rich. The T22A is nice and small and can put out 5w at 13VDC or with the optional battery.

The only things I would change are:
1) Longer time before the backlight shuts off when on battery. I know this kills the battery faster but it would be nice to have an adjustable timer.
2) Some sort of battery gague. Just about everything now-a-days has a battery gague and it would be nice to be able to know that I am almost out of power.
3) A charger that shuts off when the battery is full. As it is now, the manual says not to leave the HT connected to AC for more than 48 hours or you may fry your battery.

The things I like:
1) 5 Watts on 13VDC or optional battery.
2) Alpha memories - very nice so you don't have to remember the repeater's sponsor.
3) Optional mic with tuning buttons and such. (Nice for use in the car or with the unit on your belt - you can access many functions without looking at the radio.)
4) Size - fits comfortbly in your hand with a nice solid feel.

Can't comment on the transmitter since I'm not on the air yet, but so far as a receiver it is very good.

-Matt

Unfortunately, quite true - and *I* have little doubt we will see MUCH
more of it in our country - regardless of WHO is in office as
President...

Biggest difference between our society and those of many foreign lands,
is that we aren't yet quite as domesticated and docile...

But, we're fast learners...

It's said to be the second-most used mode on HF, but at times, I count more Morse QSOs than SSB QSOs.

>it's so old that i'd put that in the archaeology department

It's no older than phone. As soon as a transmitter was invented that could emit continuous waves (CW) it was utilized for phone transmissions.

5697. Dual Band HTs compared (Yaesu & Alinco)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-29 00:00:00 UTC
From: k3fh@aol.com
Message-ID: <20000228215259.01112.00001596@ng-fe1.aol.com>
Source record: 84710

Hi y'all,

Looking thru the March issue of QST and see that the Yaesu FT-50R-41B and Alinco DJV5TH are both around $230 and seem like a good deal. Just would like a decent HT which will work both bands (don't need crossband so one band at a time is ok)...especially impressed with the wide-band receive and FM broadcast band....seems like the MIL-SPEC on the Yaesu is impressive, tho I don't really know how much that means...have a Yaesu FT-840 and an Alinco DJS41T and have been very pleased with both.

Looking for anyone who has used both or who has compared them...right now leaning towards Yaesu.

Please no-for-sale replies--I buy all my radios new.

73,

Mike

There will always be liars and cheats in amateur radio and everywhere else. I agree that morse code is obsolete - but consider this, we have an international agreement that prohibits amateur operation below 30 MHz WITHOUT morse code profficiency. What level that may be is left up to the individual governments. I believe Japan has had a 5 WPM test for years (correct me if I am wrong - I am not positive). The U.S. finally has moved to 5 WPM, but cannot eliminate the code thing due to international treaty. There are many movements afoot to try and eliminate it entirely.

You are correct in saying some of our VHF/UHF bands are very attractive pieces of real estate. I'm not sure about 6 meters - if someone wants it, they will probably only ask for the bottom half of 6 since channel 2 television runs just above the 6 meter band (and leave us the useless part).

The purpose of amateur radio really was to get people interested and LEARNING about electronics. Most people nowadays simply memorise Q&A manuals. I dropped out of amateur radio. My last transmission (unanswered CQ) was in 1973 - with the previous transmission in 1970. I decided to get my tickets back in 1993. Because I never memorised Q&A manuals, I did not have to study. I went and 'gundecked' the test. I also retested and reclaimed my GROL (used to have my 1st class phone and telegraph - let them expire too). You'll probably find the same situation anywhere - the computer operators and the people who can put 'em together, install and troubleshoot hardware, and have no problems 'tweeking' their systems. You'll also have the cowards and liars spread everywhere also - regardless of class of license (or CBer) or ... etc, etc. You'll also find plenty of good, decent people spread everywhere also.

The $64,000 question is this - how do we attract new people into amateur radio?

73s, Jim (AA2QA)

Yaesu FTDx560 HF Tube Transceiver 10-80 meters,
plastic still on faceplate, excellent condition-
with copy of manual $250.00 (Pending Sale)

RT-524 30-76 Mhz Military FM transceiver, Good condition an 8 on a 1-10 scale,
No nomenclature tag (desirable for collectors) Replaced with Serial Tag.
Manuals and original mic. $500.00 See Fair Radio Catalog for more info. Their
Price $625.00-$675.00

Swan 1200W 10-80 Meter Amplifier, Very Clean Condition, Uses 4 6LQ6 Tubes
With Manual. $250.00 Obo Pic will be on the WebSite Soon! Will trade for a
Kenwood TS520.

Yaesu XF-32A SSB filter for FT101 series, $40.00

Tram D201 Parts, Wood End Caps, Meters, Crystal/selecter Board, Transformers,
Face Plate, Knobs, crystal filter, Etc... Inquire with your needs,.

Misc. 24V Switching power Supplies, Cosel, Power One Etc... Most new in the box

Crown IC-150 Stereo preamplifier, Metal cabinet
model with copy of manual $150.00 Obo

Midland 79-290, removeable face 10/11 meter AM/SSB/WX
Mobile,dual final design, 5 bands, WX, good condition with
stock mic. $110.00 Reduced!

Commercial VHF Handhelds:
Motorola Radius P50 (Weak Battery)
Kenwood TK240 with drop in charger, great battery, great condition.
Reasonable offer

Homebrew 3 tube 10 meter amplifier, uses 3 military
versions of the 6146, Seperate open chassis PA and
power supply deck. RF sensing, Plate Load, meter, SSB
and AM. 150-200 watts with low drive $130.00 Reduced to $100.00

Misc. Vacuum tubes (No Sweeps right now) See WebSite

Kenwood TS430, with AM filter and FM board, Manuals, Clean and working Great
$400.00 (Pending Sale)

Browning Mark III receiver, excellent condition $140.00

Browning Mark III Transmitters, Make one good one from the two units $110.00

The above Brownings can be seen on the website

Icom IC-230 with manual, mic and mobile bracket. not working correctly, VCO unlocks but in great cosmetic condition,, $30.00

Browning Mark III Receiver, Browning Mark III AM Transmitter, Very Clean! and D104 Mic $250.00 Pic will be on the Website Soon !

Tram D201s, Both have unlocked VFO's, One has lower freqs
with good AM and weak SSB the other has upper freqs with good
AM and SSB. Both in good condition $250.00 Each

Penetrator HB-150 10/15/20/40 meter Mobile amplifier, 150 watts class AB1
Low drive input required $150.00

Yamaha FG-460S-12S, 12 String Guitar, Beautiful guitar, near flawless, Gold hardware, Pearl inlay, Seymore Duncan Acoustic Pick-up, Hard Case $350.00

Hooker 10 meter Amplifier, 1 pill design, PEP and RMS mode, CW/AM/SSB, Preamplifer, Clean, still has factory seals $75.00

Pacifc Scientific / Superior Electric 2 Axis Servo System $250.00

Tram Diamond 60 AM/SSB Mobile, SIltronics Model 90 VFO -3 and Paradynamics Meter, All in good working condition $175.00

VHF Trielectric Amplifier 13.8 VDC As Is $40.00

Motorola UHF 13.8 VDC 450-470 Mhz Solid State Amplifier, Surplus, As Is $40.00

Alan K1313 10 meter Single Tube Modulator With Spare 6KG6 tube, New Russian tube installed, Spare is 90% or better, Clean and works Great! $150.00

Johnson Messenger 250 Base, With Original Box and Manual $75.00

Astatic 10DA Mic Head, Works and looks good, Missing the locking Ring but plugs right into a D104 Stand $30.00

Fentone 500C Studio dual crystal Mic Head On a TUG8 D104 Stand, Wired to a Demco Tube Modulator. Smooth Clear Audio! $200.00 Obo

Pentax K1000 35mm Camera, Wide and normal lens, 2x teleconverter. Cokin filter holder with flare guard. Several special effect Cokin Filters, polorizers and acessories, carrying case etc... $250.00 Obo

SBE Trinidad , 23 channel base CB, near perfect condition, original manual $70.00

Fluke 8050A Digital Desktop Multimeter, AC/Batt, needs new batt. but works great on AC $50.00

NF Circuit Design Block Model CR-116 Low Distortion Signal Generator, $125.00 Obo

Misc, Yaesu FT101 Components and parts, Misc untested boards Email If you need something.

Electrovoice Mic.... See Website!

Misc 19" Racks..... Email for Details

Will Trade For Mustang 5.0 Parts Or Kenwood TS520

Steve,

With this nonsense you get an official promotion to the rank of Lt. in the newsgroup police.

What do past posts of mine have to do with the points and discourse initiated over the one herein?

Once again, I prove the point that the radio newsgroups are not a venue for discussion and debate, but simply a place where the newsgroup police pick and choose the topics of importance or interest.

Believe it or not, my past postings, though they might seem to YOU as whining, actually initiated interesting debate pro and con regarding UPS, and so on. After seeing countless and endless posts here blasting others such as Bill CHeek, Mackey, and so on ad nauseum, you have the gall to complain about me.

I attempt to stir debate in an intelligent and polite manner. I apparently struck a raw nerve with my post, and instead of offering an intelligent response pertinent to fact, you launch a tirade about my past WHINING and CRYING. Then you proceed to dredge up past "quotes" belittling me for all to see here.

I do not see one word in your response relative to what we are discussing here. I guess at 3 AM, with no life and nothing else to do, blasting me was more appropriate.

Congrats Lt...proceed to monitor and snoop the groups, weeding out other whiners and cryers in the pursuit of your version of proper newsgroup discourse.

Jim,

Excellent response...

With your response, I think it is proper to jump in here and say that
I sat back these last few days after making this post and endured
criticism, ridicule, and harrassment, and did so gladly.

Lest anyone hasn't gotten it yet, I yearn for intelligent discourse on
these groups, so I make these posts in an attempt to stir up debate,
and it works. Mixed in with the guys who call me a whiner and
crybaby, and dredge up past postings, we hear some real intelligent
discussion from folks such as you, and it makes for a pleasurable pass
time.

Sometimes you have to offer the illusion of a controversial position
to get the flames going so to speak... ;)

>From: k3fh@aol.com (K3FH):quote
"Looking thru the March issue of QST and see that the Yaesu FT-50R-41B and
>Alinco DJV5TH are both around $230 and seem like a good deal. Just would
>like a decent HT which will work both bands (don't need crossband so one band
at a time is ok)...especially impressed with the wide-band receive and
FMbroadcast band....seems like the MIL-SPEC on the Yaesu is impressive, tho I
don't really know how much that means...have a Yaesu FT-840 and an Alinco
DJS41T and have been very pleased with both. Looking for anyone who has used
both or who has compared them...right now
>leaning towards Yaesu...."
If you are impressed with the FM broadcast forget the Yaesu. Although you
can "dial up" FM broadcast freqs, Wide FM mode is not built in so broadcast
stations sound all distorted. Here's a rundown on these identical sized
radios:
Alinco- Lighted keypad, Yaesu no.
Alinco FM broadcast-Yaesu no.
Alico 200mem- Yaesu 112
Computer Programmable-both
Alinco=6char alpha display-Yaesu only 4
PL enc/dec=both - "dpl" -only Yaesu
freq/channel change mike=Alinco only.
wire cloning=both
As mentioned in the March QST review, the audio output is Noticably Louder in
the alinco, on par with larger commercial radios & sensitivity etc was measured
as "top in it's class". The alinco also uses a "standard" 2-pin speakermike
jack, & standard 12vDC input jack, making it a little easier to find compatible
aftermarket accessories. Lastly, the Alinco is also sold in black as well as
a blue tinted clear color.....

5712. MaxTrac

I have a Motorola MaxTrac that has been under water when the truck fell through the ice on a lake. When I power it up all I get is the back lit lights for the front keys. No mode number display or tone when power up. RSS wont read it, I know it is just a door stopper but the owner thinks there is hope. Has someone else had a similar problem that was able to get the radio up a running again.

> will know about it. Good luck.
>

Could it be the Ford has split-fire spark plugs in it? I had interference from my motorcycle engine, noticed the popping increased & decreased as my RPM did. Turned out to be my split-fire spark plugs; replaced them with conventional plugs (solid tip) and the problem stopped. Put the splits back in, problem returned.

Just my $.02 and YMMV,
wry

Dick, compared to 30 years ago, just about anything on the market today is excellent in the qualities you name.

Afraid the only way you can get up to speed is to operate a lot of different modern radios and select what you like and want to invest in.

There are essentially no "bad" radios - just "good" and "excellent."

What is "best" is always in the eye of the beholder. To me, the Kachina 505DSP computer-controlled radio is the top of the line in every respect. Take a look at

http://www.kachina-az.com

72/73, George

ALL of the modern rigs have a clean DC note and most have far superior keying characteristics than the rigs of only15 yrs ago, let alone 30. I would venture to say that ALL have clean keying with the exception of possibly a few kit-type rigs (low $) and even many of these surpass the rigs of 30 yrs ago.

Receiver performance is a whole other animal... For best performance, look for rigs with several IF stages and multiple IF filter options, even if DSP is built-in. If you're not looking at new rigs, you owe it to yourself to check out a Kenwood 850... a superb receiver that's still somewhat portable.. the Kenwood 950 is better yet, but far less portable... if you want to compromise a bit for portability, the TS 450 (or the new 570) is one of the Kenwoods due to become a classic with many filter options and accessories (mine goes camping alot). As you might have guessed, I have a Kenwood (450) but run a Yaesu 900 mobile (ease of use and filter options are the single biggest factors in mobile CW operation.. the FT900 makes a nice compromise and is available used at a decent price)

Other used rigs to consider... ICOM 751, 765 or the Yaesu 1000 (top of the line.. $$$)
...But I won't comment on these as I've never operated them.

Just curious, have you tried a front end filter such as the ANC-4 by JPS? I think MFJ makes a clone - although I have never been an MFJ fan.
These things work great at my home station. They use a separate noise antenna (piece of wire should do it in a car) and connect between your mobile antenna and the rig. They pick up local noise and you adjust the tuning on the filter to cause the noise from the noise antenna to be out of phase with the noise from the mobile antenna and they cancel each other. It seems to work really well on all kinds of noise - both pulse and computer hash noise/carriers. The tuning is somewhat critical but once you have it tuned it covers a large part of one band. Just a thought.

Depending on how much you want from QSK, you need to consider
the Ten Tec line of rigs. If you work over 30 wpm, many of
even the best rigs start to truncate characters and lose
the receive between characters. Actually, if you check with
the die hard CW users over on the ten tec mailserver, they'll
tell you they use the older ten tec rigs for best QSK and
adequate receiver performance (and lower noise) over the
current group of rigs.

I personally like my Ten Tec OMNI VI for CW over the FT 1000
I had or the TS 850 I have (for SSB and general coverage mostly).
If CW is really your prime concern, check into it. GO ask
questions of the guys who belong to FISTS or the die hards of
QRP where receiver performance and CW are considered primary.

Best way is to find a couple of hams locally and try out their
rigs! If you are in central california (coastal) come on over!

> matter what you do, eliminate the code or pass the code test, you
> will not stay on 6, 2 and 440 but will go directly to HF.

You live in a dream world!!!
6M, 2M and 70CM (what you call 440) is NOT for the no-code
person. As a Extra Class operator I work these bands daily,
along with all other bands and I work them on CW. To say
someone will not stay on 6M, 2M and 70CM and move to HF
after the pass the code test is very narrow minded of you.
But then, getting rid of the code requirement for amateur radio
is very narrow minded and only will destroy our wonderful hobby.
If anything, make the code requirement tougher. Things worthwhile
in life do not come easy...you have to work for it! But the crybabies
out there want a license but do not want to learn the code.
Fine, if you don't want to learn the code...get a CB radio.
Because without CW...it's only CB!

Walt.

Comopare the ADI before you put money down. The only fault I can find is that the audio (from the speaker) is to low. See http://www.aesham.com/compare.html

Source record: 84738

Why is it I can't find any info. on the Kenwood TS-140s radio? The internet seems to be devoid of any information on this radio. Even the ham newsgroups like this on only contain a tiny amount of info. on the radio. I see them at Hamfests, so someone bought them years ago. Were they bad? Are they designed mainly for mobile use? Do they make a good beginners rig?

sounds like you need a new battery. My 50r doesn't do that. You need some current going to it, it would loose all your memories and settings if it didn't. (that's why the ft-530 has a lithium bat.)

Go easy body, I don't have anay interest in HF at all but i still think
now finaly that CW is abolish, why don't they change the requirement
because after they get their licenses they never goin to us it anayway. In
the the past in my country Canada to get to learn programing you required
to pass on philosophy. Frankly i still don't see the connection and you
don't need to know philosophy crap to be a good analist programer...

The 50 has a lithium battery too. Look in the circuit diagram that
came with the radio, or just open it up - it's sitting there on the
control/audio board.

But a properly-operating FT-50 draws only a tiny amount of current
from the battery when it's off. This will *not* drain a battery in
a week. There is a problem with some FT-50's that cause them to
draw too much current, several mA, from the battery, and those do
drain the battery far too fast. This is *not* normal.

The problem can be fixed - it involves changing a couple of resistors.
Yaesu will fix radios under warranty. The necessary changes are also
on someone's web site - a good search engine should find it.

Dave

5730. WTB: 2 Drake TR-7 knobs

Newsgroup: rec.radio.amateur.equipment
Date: 2000-02-29 00:00:00 UTC
From: Kevin <kpevin@mediaone.net>
Message-ID: <9YVu4.14496$84.409129@elnws01>
Source record: 84743

Hi All,

Looking for two knobs, the single knob thats on the AUX PRGRAM control and others. The other is the VFO knob. The radio is in great shape except someone tried to crazy glue the inserts on and really screwed them up.

TIA,
Kevin

But, a programmer, first and foremost, is a member of the human race, and to call himself "educated," he should have absorbed knowledge from a variety of disciplines. Being a productive member of society and making valuable contributions and important decisions requires more than just having an education in a narrow field of study.

As an example (not a flame), you could possibly be the best programmer in Canada, but taking classes in English, Debate, and Radio History would have enabled you to get your viewpoints across in an easier-to-understand manner. (And because I never studied French, I'm sure you're having difficulty understanding my views!)

Jeff
